IN THE OIL FIELDS

Office: 6241 **W. H. PECK** **Residence: 2442**

The Osage Sale.

Elsewhere will be found a complete report of the sale held at Pawhuska Wednesday, and it will be found absolutely correct and should be filed for future reference.

That the Osage stuff is in demand is easily proven by the fact that someone undertook to sell a bunch or leases just outside, in what is known as the "Kaw reservation," and signally failed. It must be inside the charmed limit, or it does not go.

The sale totaled $2,034,900, of which $2,916,900 was realized from the sale of 16,800 acres in the east half or an average of $173.64 per acre. Some price!

The west half was represented by two small blocks, which brought an average of $28.09 per acre, and the chances are will open up something that will astonish the natives, as Mr. Marland has been figuring on the geological aspect of this neck of woods for years, and he usually knows what he is up to, and while betting is easily 20 to 1 against a wildcat proposition, in this case it is not worse than a two-to-one shot.

The list of sales follows:

OIL MARKET QUOTATIONS.

Kan and Okla	$2.25	North Lima	$2.38
Healdton	1.20	South Lima	2.38
Corsicana (lt)	2.25	Wooster	2.58
Corsicana (hk)	1.30	Indiana	2.28
Electra	2.25	Princeton	2.42
Henrietta	2.25	Somerset	2.60
Caddo (35°)	2.25	Ragland	2.32
Caddo (38°)	2.25	Illinois	2.42
Caddo (32°)	2.25	Canada	2.70
Corning	2.85	Elk Basin (Wy)	1.85
Penn	4.00	Grass Creek	1.85
Canada	2.25	Big Muddy	1.50
Cabel	2.77	Salt Creek	1.50

Schedule of lands of Osage Reservation, Oklahoma, sold at public auction March 5, 1919, under department regulations approved August 26, 1918, for the mining of oil, showing description of land sold, bonus offered and name of purchaser.

Late News From Texas.

(By PRENTISS MOORE.)

DALLAS, Texas, March 6.—The Mid Kansas Oil & Gas Co., a subsidiary of the Ohio Oil company (Standard Oil company) has a well in the Caddo pool Stevens county, Texas, northern end of the deep sand territory, flowing 6,000 barels daily. It is the W. E. Carey No. 1.

The well was drilled in several weeks ago, was shot and bridged broke loose a couple of weeks flowed 3,500 barrels daily for a few days and bridged again. The well is now apparently clean. Its present flow makes it the largest well drilled in this part of the territory. It is approximately eight miles east of the 5,000 barrel well completed two days ago in the same county by the Gulf Oil corporation. The Ranger pool proper is approximately 20 miles south of these wells. The Gulf Production company No. 1 Winston three quarters of a mile northwest of the Moore and Roeser well, is making 600 barrels.

The Sinclair Gulf company No. 1 Ledbetter, Caddo pool, is flowing at the rate of 1,000 barrels after a shot. Late developments in Stevens county indicate that district may soon be a formidable rival of the Ranger pool, which so far is the most important producing locality in the north central Texas deep sands.

Second Well Looking Good.

The Producers & Refiners corporation and Iron Mountain Oil company and Lambert No. 2, Eliza Johnson farm in 30-13-12, is making 4,000,000 feet of gas and is spraying 25 barrels of oil at three feet in the sand, which was found at 1,954 feet. It is being drilled deeper and looks much better than No. 1, which is now rated as a 30-barrel producer. No. 3 on the same lease, is drilling at 1,400 feet.

A New Process for Drilling.

George Simpson, who hails from California, is the inventor of a new process for drilling wells, that if it will accomplish one-half what he claims for it, will revolutionize the drilling of wells, and especially in a territory where the rotary process would naturally be used.

It is a scheme for utilizing air, just as rock drills utilize air, and his invention has the ear marks of being an entire success. For the last few days Mr. Simpson has shown his plans to expert drillers here, and has secured the indorsement of some of the few that know what compressed air will do, and is anxious to have the Commercial club back him in a model test machine, which if it is a success, would greatly benefit Oklahoma.

Many times these new inventions are used by people who make no effort to get good results, as for instance, a certain refining process which was backed by this column to the limit, and is now making good after being turned down here by some of the alleged refiners or rather employes of plants here.

It seems as though Mr. Simpson's scheme is worth trying and men like W. A. Smith, who are scientific investors, have passed on it favorably. It may fail, but it certainly is worth trying out.

At Duncan.

Merrick and others are fighting caves from 2,225 to 2,550 feet and are now cleaning out 50 feet off bottom, in their No. 4 test on the James farm in 4-4-18.

The Sparks Oil Development company is shut down at 1,683 feet waiting on a boiler on their Sparks farm test in 30-2s-4w.

The Texas company is spudding in with a 20-inch hole on their Quney farm test in 27-2s-2w.

The Lone Star Gas company has the tools in the hole and are fishing at 1,319 feet on its Melton farm test in 26-2s-2w.

The Magnolia Petroleum company is drilling at 2,390 feet in the sand and have a showing of a little oil on their No. 1 Jenkins in 12-2s-3w.

J. P. Keys No. 1 McMahan in 28-1s-10w is drilling at the top of the sand at 2,392 feet, and at 4 feet in has 200 feet of fluid in the hole. It will drill in today.

The Gypsy company No. 2 Zipsie in 29-1s-10w are setting the 6⅝ casing at 2,335 feet, and will cement.

J. L. Hamon, Stevens farm test in 8-2s-10w is drilling in sand at 2,128 feet. The top showed a little oil, but they are now drilling in salt water.

The Carter Oil company is drilling in red gumbo at 2,245 feet on their Weaver farm test in 29-1s-8w.

The Tidal Oil company has set the 8-inch in cement at 2,065 feet and is now shut down waiting for the cement to set, and will drill in with cable tools on their Harris No. 2 in 21-1s-8w.

Jake Hamon is running the 6⅝ casing at 2,385 feet on his Hines farm No. 1 in 26-1s-10w.

J. C. Keys is down 2,200 feet on No. 2 Moyer in 21-1s-10w.

Good News From Texas.

The Sinclair people are more than pleased with the showing made by the Mid-Kansas well on the Terry farm near Caddo, which is making 6,000 barrels a day and is an offset to a 600-acre lease owned by the Sinclair people.

The Sinclair Ledbetter No. 1, in Stephens county, is making 1,000 barrels with 25 feet of cavings in the hole following a shot, and is located a mile and one-half from the Swenson farm owned by the Monitor and Harry Parker. Thus, two or three of Tulsa's oil producers are benefited, not to mention the fact that Frank Moore, Charles Roeser, and E. R. Kemp are also close to the big Mid-Kansas well.

The Sinclair test on the Gaines farm in Brown county is making a flow every night, and ought to shoot into a good producer. It is a safe bet that Tulsa people will get theirs before the game is played out to the end of the string.

Eureka, Kansas Notes.

Derby and Marshall No. 2 well, in 36-25-8, has been on the pump three days, 72 hours, and they have not completely exhausted the water, though oil has shown several times the past few hours.

The Kinney Refining company test on the Hall farm in 10-26-8, has succeeded in shutting off the water, and the well is making 15 barrels of oil daily.

The Great Southern & Tidal Oil company has two new rigs up, No. 9, located 200 feet from the north line and 152 feet from the west line of 36-25-8, and for No. 8, located 200 feet from the west line and 825 feet from the north line in the same section. Both wells are on the Bryden farm.

In the Osage.

The Deep Pool Oil company (The Osage Oil & Refining Co.) have a machine moved in and is rigging up on No. 1 test in the northeast corner of the northwest of 31-22-12, three miles west of Skiatook.

The Twin State Oil company No. 1 well, in the southeast of the northeast of 32-22-10, is drilling near the Bartlesville sand, and the strata is looking favorable for a producer.

John Markham No. 5 well, on the Findlay farm in the north half of the southwest of 35-21-8, is a failure.

Good Well in Pawnee County.

Catlett & Davis have completed a Bartlesville sand well, the total depth of which was 2,387, with 25 feet of pay, in the northeast corner of the southeast of 11-20-8. It is good for from 80 to 100 barrels, and shows once more that the Pawnee county stuff is still worth drilling. Recent developments over there have shown mighty good results. The main thing is to get into the black jack timber, and in a spot where a dry hole is at least a rod distant.

Looks Like the Real Thing.

The Sapulpa Petroleum company has a well making 150 barrels in the Skinner sand, which was found from 2,520 to 2,542 in the northwest corner of the east half of the southeast of 25-19-7. It is good enough to mark the opening of the new pool and is evidently genuine stuff and strange to relate, is in a district that was passed up by some of our leading geologists only recently.

In Linn County, Kansas.

Ash and Lemon have a 10-barrel well in No. 1, on the J. D. Gare farm in the southeast of the northeast of 3-20-22.

The Eldorado Linn Oil & Gas Co. No. 7 well, on the S. I. Shinkle farm in the southwest of the northeast of 2-20-22, is making 15 barrels.

Miami County, Kansas.

Thompson and others have a duster in their test on the Goodrich farm located in the east half of the southwest of 8-17-22.

W. J. Bailey No. 6 well, on the James Collins farm in the southwest of the northwest of 29½-18-22, is making around five barrels daily.

In the Bartlesville District.

The Quaker Oil company has a 25-barrel producer in its No. 1 test, on the C. O. Cooper farm, located in the northeast of the northwest of the north half of the northwest of the northwest of the southwest of the northwest quarter of 3-27-14.

Anderson County, Kansas.

C. G. Morgan has an eight-barrel well in his G. T. Robertson farm test, located in the southeast corner of the north half of 15-20-20.
