Western Petroleum Refiners' Meeting

By W. H. PECK
Oil Editor The Tulsa World.
Special to The World.

KANSAS CITY, Mo., May 6.—Kansas City is full of people today. Some of them come for the Carnival concerts, but many others are here for the meeting of the Western Petroleum Refiners association, which has in progress a most important session.

Pat Malloy of Tulsa is going to be installed as president of this organization in place of E. L. Shock and for that reason the Tulsa delegation has a lively interest in the proceedings.

For secretary the association is likely to elect Captain Lehman, a son of Frederick W. Lehman of St. Louis one of the greatest lawyers in the country. Captain Lehman is just back from France, rugged and full of energy, and with a most pleasing personality. He seems to be the popular choice and his election is generally predicted.

Among those who are here for the convention are Miskell of the Empire company, Carey of Cosden & Co., George Moore of the Consumers Refining company, W. H. Hassett of the Imperial Refining company, Miller of the Miller Petroleum company, Marcell of the White Eagle Refining company, W. F. Kistler of the Producers & Refiners corporation, W. B. Richardson of the Lake Park Refining company, Zake Taxman of the Eldorado Refining company, Gobel of the Kansas City Refining company, R. S. Avery of the Southern Oil corporation, Jack Ryan of the General Refining company, Collins of the Marland Refining company, McCoy of the Okmulgee Producers & Refining company.

In addition among the oil men who are here are Cole of the Ohio Cities Gas, A. G. Talbot of the Western Petroleum, J. Ross, representing "Petroleum," and a few others.

There is a banquet tonight in honor of E. E. Shock, retiring president, and R. L. Welch, which will be an elaborate affair with a large attendance and much good cheer.

Thinks Should Peddle Stock at Peace Conference

"Some of you Magic City boosters ought to syndicate the Fiume Mid-Continent International Oil corporation, for a few billion, and send your stock peddlers over to the peace conference," Godfrey Brigham wrote a few days ago from Europe to his father, George F. Brigham, president of the Commerce Petroleum company. "There are a number of shut-down oil refineries there that ought to be good money makers."

Other less relevant but quite as interesting parts of his letter are as follows:

"In going up through the Adriatic sea without the aid of a pilot, through the mine fields we accomplished a feat no other ship had done, as two merchant ships and an Italian cruiser had been sunk the week before. The Italian port officials thought it remarkable. Both Fiume and Trieste are well built cities, now garrisoned by Italian troops. The people here have seen better days, but have been on the verge of starvation for some time. You see old men and women and young boys and girls, but no children under three years old.

"When we went on Liberty the people gave us the once over, saying "Bravo Americano," or touched the collar of our jumpers for good luck. Bread, candy or cigarets were of more value than money. At Trieste the Italians had a quantity of captured munitions. We heard of this and helped ourselves. My share was two Austrian rifles, six hundred rounds of ammunition, a fox skin knapsack, gas mask and part of a machine gun, which I am sending home. Mr. Brigham received a telegram from his son, Godfrey, from Brooklyn, N. Y., advising that he had been transferred to the steamship Prinz Freiderick Wilhelm, and was sailing for a European port.

Godfrey Brigham is a chief petty officer in the United States navy and since his enlistment has been attached to the U. S. S. West Lashaway, a cargo transport, which arrived in New York April 22 and has been turned over to the shipping board of the merchant marine. The West Lashaway was the first American ship to enter the harbors of Fiume and Trieste, Austria, for four years, where they distributed a cargo of flour. It was while on this trip that young Brigham wrote the above letter.

Before his enlistment Godfrey was assistant foreman at the North American car company works at Coffeyville. After his last trip he had hoped to be relieved and return to his work.

South of Pawhuska

Complete reports on the Wynona district have not yet come in but a 1,000-barrel well and a 500-barrel well are among the completions reported so far.

The 1,000-barrel well is reported for the Foster & Norwood Oil company, the No. 14 in the northeast corner of the southeast of 22-24-8 which got the top of the sand at 2,138 feet and is down 2,162. This well will be shot later.

The New England Oil company No. 1 well in the southeast corner of the southwest of the southeast of the southeast of 5-24-10 as reported in yesterday afternoon's World, is good for about 500 barrels of oil. The top of the Bartlesville sand was got at 2,015 feet and the well drilled to 2,075. It was shot at this depth with 240 quarts and flowed 362 barrels the first 24 hours.

The Carter Oil company has two of its wells in the southwest of 6-24-10 on the top of the sand. They are the No. 14, which at a total depth of 2,040 feet is swabbing and flowing 100 barrels after a 140-quart shot, and the No. 15, which is running the pipe to drill in at 2,015 feet. No. 13 is drilling at 2,000 feet and No. 16 at 40. No. 11 is shut down at 2,048 feet. The latter had a show of gas in the sand from 1,960 to 2,100 feet and is waiting for orders after being plugged back to the present depth.

Other late reports of the district are as follows:

A. J. Wharton and others No. 1 in the northeast corner of the southeast of the northwest of 23-25-10 is drilling at 1,000 feet.

The Osage Development Oil company No. 4 in the southwest corner of the southeast, southwest southeast of 31-25-10, is down 760 feet.

The Finance and Peters Oil company No. 2 well in the southwest corner of the northwest of the southwest, northeast of 12-25-9, is a failure at 2,397 feet.

The Big Four Oil company has a 10-barrel pumper in the No. 1 in the center of the northeast of the northwest of 11-24-9 in the sand from 2,230 to 2,252 feet. A small show of oil was had at 2,198 feet, the first break in the lime which was topped at 2,175 feet. The well is producing from the second break, only one other well in the Osage having been drilled to it. A dry sand was passed through at 2,110 to 2,155 feet. The total depth of the well is 2,252 feet.

D. H. Travis (the Testing Oil company) has drilled in the No. 3 well in the southeast corner of the southwest, southeast, northeast of 14-24-9. The top of the sand was got at 1,321 feet and the oil which is estimated at about 50 barrels, is being produced from sand from 1,530 to 1,543 feet. This is in the Cleveland sand, and is in the same strata the first well on the lease was completed in. The No. 1 well was considered one of the biggest surprises of the Osage, having come in at about 4,000 barrels unexpectedly in that sand.

Foster and others No. 9 well in the southwest corner of the northeast, southwest, northwest of 24-24-9 is rigging up.

W. G. Skelley's No. 2 in the northwest corner of the northeast, northwest, southwest of 24-24-9 is drilling at 1,150 feet.

McMann Burkburnett Producton Nears 10,000 Barrels

The production of the McMann lease is now estimated at 5,500 barrels, according to the company's latest reports, and with four wells on the top of the sand ready to be drilled in, it is confidently expected that inside of another week, production will have increased to at least 10,000.

Until the last week when Gillespie drilled in a bunch of wells on the Marine lease, a sort of friendly rivalry was on between the two as to which lease produced the most oil, and until that time, the McMann lease steadily kept in the lead. With a dozen new wells drilled in all at once on the Marine lease, however, the latter production easily surpassed that of the McMann Oil company, it being now around 7,500 barrels. Considering the fact that the McMann company is drilling in and developing the lease in much the most leisurely manner, the production on it is likely to hold up much better than that of Gillespie.

There is no doubt but that the wells drilled in will pay for themselves on both leases. The companies are erecting casinghead plants and intend to get all that is coming to them in the way of casinghead gas, and this will undoubtedly help in the paying out, the gas being particularly good for such extraction of gasoline in the Burk field.

On the McMann lease, the No. 4 well is still fishing. The well has been drilled 7 feet in the sand.

No. 7 has drilled into the sand and the water is being bailed out preparatory to drilling in. It is estimated at about 1,200 barrels.

No. 13 is 3 feet in the sand, and No. 15 is on the top of the sand.

Nos. 16 and 17 are rigging up to drill with cable tools.

At Hominy

Late reports from the Hominy district show about the usual number of fair completions and a noticeable amount of new work.

C. K. Dresser No. 3, located in the northeast corner of the northwest, northeast, northeast of 13-23-10, is the biggest well of the week. It was drilled in in the sand from 1,816 to 1,819 feet. The total depth of the well is 1,850 feet.

The Kewanee Oil company is drilling at 1,360 feet in the No. 2 in the northeast corner of the northwest of 13-23-10. The same company's well No. 3 in the center of the east line of the northwest of 13-23-10 is drilling at 400 feet.

The Flescher Petroleum company is rigging up the No. 1 well located in the northwest corner of the southeast of 13-23-10.

The Enterprise Transit Oil company's No. 1 in the southwest corner of the southeast, southwest, southeast of 25-23-10 is down 61 feet.

The Central Petroleum company No. 1 well in the northwest corner of the northeast of 21-22-9 is a rig.

The Twin State Oil company has a failure in the No. 1 in the southeast corner of the northwest of 32-22-10. The total depth of the well is 2,101 feet.

The Gillespie No. 4 well in the southeast corner of the northeast of the southeast of the southeast of 32-22-10 is drilling at 500 feet.

The Twin States Oil company has a rig up for the No. 2 in the southeast corner of the northeast, southeast, northwest of 32-22-10.

Gillespie No. 5 in the center of the west line of the northeast of 32-22-10 is estimated at 35 barrels. The well is producing from the 1,162-foot sand, the total depth being 1,184 feet.

E. N. Gillespie No. 13 in the northeast corner of the southwest of the northeast of the northwest of 33-22-10 is a 75-barrel well from 1,160 to 1,185 feet.

The Texas company is drilling at 500 feet in the No. 8 in the northeast corner of the northwest of the northeast of the southeast of 33-22-10.

The Marsay Oil company No. 9 in the northwest of 35-22-10 is making 18 barrels of oil from 1,220 to 1,234 feet. No. 10 in the northeast corner of the southwest of the northeast of the northwest of 35-22-10 is a rig up.

Kimbley Getting New Deep Sand

E. W. Kimbley will drill in today a well which has the top of the sand in the southeast quarter of 27-13-12 at 3,048 feet. The test is showing for a good well and a number predict that it will be one of the biggest producers in the entire Okmulgee district. The top of the sand was got on Sunday.

It is about 50 feet deeper than other producing wells thought to be in the sand, but Kimbley declares that he believes he has the same sand.

This well, in the opinion of operators and geologists, outlines a large field of possible deep production. No failure has been recorded in the drilling for the deep test in which the Kimbley well struck pay Sunday. One well was abandoned several months ago and plugged, but it is thought that the well might have been made a producer.

Four Six Oil Company Well Making 500 Barrels

The well of the Four Six Oil company, variously referred to as the 6666 Oil company, and the well on the school land, in the southeast corner of 4-2s-10w, reported in yesterday afternoon's World, is estimated at 500 barrels. The well was first supposed to be good for about 750 barrels of oil.

It was brought in late Sunday in the Walters field on a district school lease within a few yards of the school building. The royalty from the well is estimated at from $1,000 to $5,000 and will go into the school treasury. The well is about a quarter of a mile west of the McMann Oil company's production in the field and a mile south of other production.

From Yesterday's Afternoon World

The Black Hawk well No. 2, one location west of the No. 1, has stopped flowing and it is now thought that after being put on the pump the well is likely to produce approximately 400 barrels of oil. The hole is an eight inch, and not enough gas is in evidence to make a flow in such a big hole. The well got the top of the sand at 2,296 feet and has been drilled in 8 feet.

The Gladstone Oil company has completed its No. 1 well in the northeast corner of the northwest of the southeast of 5-2s-10w, good for from 30,000,000 to 40,000,000 feet of gas. It is also spraying some oil. Production is from the sand at 2,000 feet which was passed through with a rotary.

Cowpunchers Get Showing in Kansas Wildcat

The Cowpunchers Oil company, backed by a number of livestock men at the Kansas City Stock Yards, is reported to have a showing in a wildcat well about 3 miles from production in Kansas.

The well is on top of a deep sand found at 2,680 feet, and is in a deeper strata than any close production, the nearest being some 2,400 feet stuff in the eastern part of Butler county, about 7½ miles from it. The Hull pool drilled in by the Jones brothers mostly in Greenwood county, is also of this shallow stuff.

It is located in the center of 20-26-8. Nothing definite has been received on the test.

Sedwick County, Kansas.

Brooks and associates have an underreaming job to 1,635 feet in No. 1 on the Winter farm in the southwest of 28-25-2.
