Biggest Well at Bull Bayou

This J. H. Snyder Oil & Refining Co. primed in yesterday a well in section 8, which appears to be the largest well yet brought in in the Bayou field. It is estimated to be good for from 15,000 to 18,000 barrels. Work is now in progress on the big well recently completed by the Atlantic Oil company, which was taken over by the Texahoma Oil company, and which started at 20,000 barrels.

Late News From Ardmore

ARDMORE, Okla., Oct. 24.—The Hewitt field today has another big well.

Weatherford & Drake, on the Hallett farm in 28-4s-2w, the southeast offset to the discovery well, went into a second sand at a depth of 1,385 feet, and with the drill 20 feet in the pay, the well made some sensational flows and the production is conservatively estimated at 1,200 barrels a day. This well had its first sand at 1,334 feet and with another sand is due to be picked up. The well proves that Hewitt has a variety of sands all of which are well saturated with oil. A new sand has been found at Hewitt, which may prove to be a very interesting feature of the field. The Carter oil company in the R. A. Hefner farm in 22-4s-2w picked up a seven foot sand at 1,250 feet. The sand was rich in oil of a good grade. While it was not tested out it is believed that this sand will make a pay well. The company will not stop to develop it at this time, but will drill to lower depths where thicker sands are expected. This sand looks good to owners to the north of the discovery as well as it is very probable that it will spread over a large area of the field and pick up much wealth.

John Crawford Is in Town

John Crawford arrived in Tulsa yesterday and is more than usually optimistic as to the business outlook and is especially well pleased with the way he finds things around the Oklahoma Producing & Refining Co's office and with the drilling well and production in general of the concern that he was so long the head of, and the leading spirit in its great organization. He may well be proud of the way things are going as the following will show.

The Oklahoma Producing & Refining corporation already has started one well and will start four more on its 80-acre Ferrier farm lease in 20-23-4, Butler county, Kansas, as soon as material can be assembled on the lease. The first well is an offset to a well on the southwest corner that came in early in the week with initial flow rated at 50 barrels an hour. This and a well rated at 20 barrels an hour a half mile north of the north line make the entire acreage appear mighty promising for big production.

The vigorous drilling campaign that the corporation has under way

OIL AND GAS

Leases, Supplies, Production, Etc.

$17,000 Osage Lease.
Will give 60 per cent interest for first well; sands 1,600 and 2,100 feet; top lime 2,500, owner sick, will must be commenced December 1. Excellent geology. Box 1079 or Osage 4853 and 0451, Tulsa. Advt.

Young man with five years' stenographic and general office experience, one year with independent oil producer, desires position with independent oil producer, or in the land or scouting department of oil company. For interview address Y 19, care World.—Advt.

Increased Activity in Comanche County, Texas

LAWTON, Okla., Oct. 24.—The Texas oil field in Comanche county, which for a long time past has been in a dormant condition, is now showing signs of activity. Two rigs are now drilling in the Northwest and the Southeast fields among sands of the Lawton Texas oil field. Two rigs are being set up. Each can go down to a depth of 3,000 feet and most of the prospects are 2,500 feet. The oil sands in the Texas field are very thick and the indications are promising.

Some of the most advanced tests in Comanche county show about 25 barrels according to gauge. Humble Oil & Refining Co., 1 Sam Fishing & Rod Club, No. 1 Barnes, showing at 2,100 feet. No. 1 Bond, 1,750 feet. Magnolia Petroleum company's No. 1 Duke, 2,250 feet. Sun company's No. 1 Shultz, 2,350 feet. Atlantic Oil Producing company's No. 1 Watkins, 2,500 feet. Crude oil company's No. 1 Carroll, 2,500 feet. Texas oil company's No. 1 Wallace, 1,850 feet. Sun company's No. 1 Wooley, 1,850 feet. Skelly & Sinclair's No. 1 Myers, 2,250 feet. Kan-Tex oil company's No. 1 Perry, 2,800 feet. H. P. Davis's No. 1 Fate, 1,700 feet. A. G. Flynn's No. 1 Walbrey, 700 feet. Lone oil & Refining Co.'s No. 1 Cassatty, 2,387 feet. Comanche oil association's No. 1 Turkey, 2,150 feet. Humble Oil & Refining Co.'s No. 1 Barton, 2,250 feet. Hughes Petroleum company's No. 1 Petty, 1,450 feet. Texas continental Petroleum company's No. 1 Crowell, gauged at 2,250 feet. No. 1 Lewis plugged at 2,400 feet. No. 2 Lewis, 2,150 feet. No. 4 Lewis, 1,800 feet. No. 1 Peck, 2,270 feet.

Another big week in some of the oil fields of this section of Texas resulted in heavy wagon roads and difficult hauling for materials. The situation was more acute fall in Stephens county, perhaps than elsewhere, owing to the long haul there. Production in Stephens county fell off the last week about 2,000 barrels. The new developments in the region northwest of Breckenridge where the Texas company brought in a good well at 1,700 feet, attracts a great deal of attention as this so-called shallow production of the volume found in the new well makes a very attractive proposition. The production is about 500 barrels a day and at the depth attained the cost of a well is less than one-sixth that of one of the deep wells in the Palo Pinto and Stephens county fields. This new well is in 21.

Completions in Stephens county for the past week were fewer than the average and that was because of bad roads. There are more than a dozen wells down in the top of the sand and most of these should be drilled in this week with the oil look good for a gain in production to offset the loss of the preceding week. In the vicinity of the Parks pool and in each direction from the new railroad town of Frankell, 11 miles north of Ranger, the activity has been marked by progress in drilling and by a number of new locations. Between Frankell and Caddo there is great activity and the prospect is that the pool will be connected up with the drilling of a few more wells to the oil sand.

Big Texas Well Increases Flow

Advices from Dallas state that the Magnolia Petroleum company's big well on the Caruth tract, twelve and a half miles west of Desdemona, which has been flowing 2,900 barrels, has increased the flow to 5,200 barrels daily. Total depth is around 2,300 feet. This was the first important well west of production at Desdemona which extended the pool in that direction.

Empire Refineries Change

The Empire refineries make announcement of several changes in their refinery division. L. D. Mann, who has been superintendent of the Oklahoma city plant, has been transferred to Cushing, Okla., where he will look after the company's interests in that field. E. F. Bass, former superintendent at Cushing, has been transferred to the Ponca City plant. E. L. Marsh, superintendent at Ponca City, recently resigned his position, and joined the Crew-Levick organization, also a Doherty subsidiary, and the above changes were brought about by his resignation.
