David J. Kelly Is Dead.

David J. Kelly, prominent oil producer and well known in the mid-continent field where he had been for many years active in the producing and of the business with large holdings near Avant in the Osage, is dead. He died on the operating table in New York during an operation for appendicitis Sunday. His death was a severe shock to Tulsa people where he had been a familiar figure for years and where he had taken an active part in all matters pertaining to the welfare of the oil men especially prominent in the councils of the Mid-Continent Oil & Gas association.

It is certainly hard to realize that he is to be with us no more, as he always was in the most robust health and with an unlimited supply of energy. Elsewhere will be found a full account of his life and work.

What Is Gasoline?

When the corporation commission finds out what gasoline is, it will let the public know.

This is the purport of rule No. 22 of the recent ruling governing the inspection of gasoline and kerosene, which reads as follows:

"22—The ruling as to what shall constitute gasoline of the various grades mentioned herein has as yet not been decided upon by the corporation commission. When such has been determined due notice will be given."

In rule No. 21 the commission defines what shall be construed as "aero" gasoline. Apparently this is as far as the commission got in its oil education. Unfortunately very few people own airplanes, and it is presumed that automobilists must wait until the commission dishes them out some special kind of gasoline.

The commission held a hearing on the question of determining the status of different grades of gasoline and kerosene nearly two months ago and thus far nothing has come of it.

The fact of the matter is that none of the three commissioners is an oil man and it is doubtful if any one of their four score or more oil inspectors knows how to make a distillation test.

These are the men who are going forth to educate the public on refined oil matters.

Deep Sand Wells Holding Up Well.

Special to The World.

PONCA CITY, Nov. 6.—The deep sand wells drilled by the Marland Refining company in the field two miles south of Ponca City are holding up remarkably well as the records of the company show. These wells are drilled to a depth of 3,900 feet and cost on an average of $65,000 each. The George H. Brett No. 6, which was brought in on June 20, has made over 145,000 barrels to date, having paid for itself approximately four times. The Alberta Four-eyes No. 8, the last of the 3,900-foot producers to be brought in, has made over 68,600 barrels since it started flowing on July 25.

The Marland company has decided that steel rigs are a profitable investment in drilling the deep wells, having experimented with one for the past 90 days. In using a steel rig the drilling crew had to shut down out 70 days in putting down the Mollie Miller No. 10 on account of rig trouble.

The pumping of the deep wells, when that becomes necessary, is being put to the test by Marland. He is having a 35-horsepower motor installed at the Mollie Miller No. 9 to furnish power for the pump when it is installed. The well has been flowing naturally since January last, producing from the 3,900-foot sand. It is believed that motors will cut the cost of pumping operation.

Great interest is manifest in an oil discovery on the E. J. Wilkins farm, 12 miles southwest of Tonkawa, an extension north of the Billings field. When the drill penetrated the sand the oil spouted to the top of the derrick. The depth is about 2,000 feet.

The Blackwell Oil & Gas Co. has a 15,000,000 gasser in its No. 12 in the southeast of 6-28-1e, and its No. 3 in the southwest of 15-27-1e has been drilled to a total depth of 1,600 feet and plugged back to 840 feet, where it is a 500,000 gasser.

Late News from Ardmore.

By JOHN EASLEY.

Special to The World.

ARDMORE, Nov. 9.—Arrangements have been made by which a well of more than unusual interest to Carter county will be drilled. The well will be located in the southwest of the southeast of the south west of 19-4s-1w, on the J. C. Reid farm. The contract has been awarded to the Shafer Drilling company, and tools are now being shipped from Walters. The contract depth is 2,500 feet. Drilling operations are to be started within 30 days. The American Industrial Oil company, which has been joined by others interested in that portion of the field, will drill the well.

Chickasaw Refining company, on the P. N. Morrison farm, in 26-4s-2w, has succeeded in shutting off the water, and at last report was running the 6-inch casing. The well is now at a depth of about 2,150 feet and drilling operations will be started immediately.

Wirt Franklin, on the Thompson farm, in 21-4s-2w, which well picked up an oil sand at a depth of 1,800 feet about a week ago, has penetrated the sand for 15 feet. The well has been flowing at intervals since it was brought in and last night made 500 barrels. Such a prolific oil sand has not been found at this depth by any other company in the new Hewitt field, and this well gives promise of being the best producer in this section of Oklahoma.

Plains Oil and Gas company has made a new location in section 22 of the Hewitt field and a rig is being built preparatory to start drilling immediately. The well will be located in the southwest corner of the southwest quarter of the northwest quarter of 22-4s-2e.

Yellow Hills, well in 7-5s-1e, is drilling at a depth of 1,960 feet. The formation at this depth is a sand rock.

Carter Oil company No. 2 on the Tucker farm in 29-2s-1e has started to a total depth of 2,719 feet. The drill passed through an oil sand which had a thickness of two or three feet at 2,692 feet and the well is now pumping to test the strength of the sand. The well is pumping something like 100 barrels of oil and water and about one-fourth of the quantity pumped is said to be oil. It is believed that the water can be exhausted and that the well will possibly make 25 barrels of oil. It is also stated that deeper drilling will be done.

The Anderson & Simpson well, in 27-4s-2e, is drilling on top of the two-under reamer logs which were lost in the hole a day or two ago. The depth of the well at this time is 2,937 feet.

The Texas company No. 2 on 108 A. E. Perry farm, in a water sand at 2,050 feet. There is only about 12 feet difference in the elevation of this well and that of the discovery well on the same farm in the Hewitt field, and well No. 2 is due to reach an oil sand within a few more feet.

Big Well at Pawhuska.

PAWHUSKA, Nov. 10.—Oil territory around Pawhuska got a big boost today when a well being drilled by Foster & Davis in the northeast of 17-25-9 struck oil in the Bartlesville sand at 1,924 feet. The well has filled up 800 feet in hole and the operation shut down to hitch up.

This well is located about two miles southwest of Pawhuska and four miles from production and is the biggest piece of news in the oil game here in several months.

This well has aroused more enthusiasm than the well discovered recently six miles from the city. The new well will be drilled in as soon as tankage is set.

Production is fast coming nearer Pawhuska. Eighteen months ago there was some oil 10 to 12 miles from Pawhuska, but the city had not benefited much from that source and not until six months ago were developments being taken near the city.

With the Marland company drilling 32 wells and with production coming in big every day interest here is on the highest pinnacle in the oil game it has ever known.

At Bull Bayou.

The Texlahoma oil company has a well making between 3,500 and 4,000 barrels in their No. 5 Strange property in 8-12-10. No. 7, on this lease which will be due shortly is only two locations from the Shaffer well, which made 10,000 barrels initial production.

At Peabody.

Pierce and Pierce on the Jones farm at the center of the east line of the north east of 17-22-4 is a failure at 2,583 feet.

The Forester No. 1, Windsor farm, located at the center of the northeast of the southeast of 8-22-4 is abandoned at 2,080 feet.

Wanted 50 to 100 barrels production or royalties or will join one who has good prospects. Full details required. Address T. S. 718 Kennedy.

With the Oil Men

R. A. Broomfield has gone to California on a short business trip. He will be back early next week. Mr. Broomfield is vice president of the Barnsdall Consolidated.

"Pooey" Blevins, the noted football player who is now scouting for the Ohio Cities is in the city from Kansas. He is mighty well pleased with the way Kendall is playing the game these days.

Alfred Drescher, formerly with the Empire people, but now at the head of the Emerald Oil company, has announced that he has let a contract for a well on the Panuco river, in the Tamboyoche field of Mexico. He also says that his concern will enter the Louisiana field at once.

Arthur Lippa, vice president of the Sinclair of Louisiana, is the proud father of a son born Sunday at the family home on South Cheyenne. Mr. Lippa arrived in town about two hours before the youngster arrived, which was exceedingly fortunate. He is receiving the congratulations of a large circle of friends.

Senator N. V. V. Franchot is in the city from Olean, New York, where he took an active part in a meeting of the New York Oil Producers association. There was a big dinner and a banquet at which Mark L. Requa made the principal address. The senator is drilling a well down in 24-13-10 southwest of Okmulgee that looks like it might open a new pool of some size.

Dorsey Hagger and A. E. Robitaille, both well known geologists of Tulsa are now associated with the National Exploration Company of New York and Los Angeles. They have been making a survey of New Mexico and will either have to find oil or quit the business, according to a well-known geologist who has staked his reputation on finding oil out there.

A. D. Whiten is in town from New Mexico and is looking unusually prosperous. He says that he believes they are going to get some oil on the east slope of the Rocky Mountain uplift, but in the meantime thinks more of the stuff around Jennings. He says: "I have looked them all over and think that Oklahoma is the best of them all." Mr. Whiten was for many years a scout for the Prairie Oil and Gas company.

T. C. Skeen, general manager of the Parkersburg Rig and Reel company, entertained his office force and some of his warehouse employes with a genuine possum and sweet potato dinner at the Petroleum club Saturday night. Best of all Mr. Skeen can do it any old time as he has got the best coon and possum hunters in his employ there is in this neck of the woods. There were 21 members of the staff present and in addition the oil editor who will eat baked possum and anyhow. These meetings are the means of building up the finest kind of loyalty for the firm and are much appreciated by all the boys.
