North Lima	3.07	Corsicana	3.00
South Lima	3.06	Burkburnett	2.15
Indiana	3.05	Electra	2.00
Plymouth	2.98	Moran	2.85

Tank Wagon Markets Up

The Standard of Indiana advanced the price of gasoline 1 per cent per gallon yesterday and also added 1 cent to the tank wagon price of kerosene, which applies, of course, to all the states in what is technically known as the Standard of Indiana territory. This makes the price for gasoline at Chicago 22 cents and kerosene 16½ cents.

The Standard of Ohio also advanced the tank wagon price of kerosene 1 cent.

The raise was not even as good as anticipated in yesterday's paper, but may be followed shortly with other raises that will bring the price up to within the neighborhood of what it is actually worth to produce and refine. The advance does not cover the increase in the price of crude since oil was $2 a barrel by any means, but will help some. These prices were met by the Sinclair people promptly.

So far as the Oklahoma price is concerned it is evident that the man who has poor stuff for sale will keep the price down as it is the only inducement to buyers. There are no exceptions to this rule.

Price of Pipe Is Up

Oil country pipe was advanced yesterday by pipe manufacturers according to advices from Pittsburgh, $10 per ton. It adds a little to the hilarity of the situation.

Market for Casinghead

Rose Remick, sales manager for the Livingston Oil corporation, is entitled to the credit for having found a good market for a great number of cars of casinghead gasoline and has shipped his second trainload well out of the country where it will not conflict with the products of the refineries or the casinghead plant of the Mid-Continent field. This has been purchased by California refiners who will use it to liven up the products of their refineries. Mr. Remick is entitled to the greatest credit for having found an outlet for so much of this product. The chances are that by spring someone will be wanting to make contracts for casinghead and will find a great change in the situation.

The Reward of Patience

Waite Phillips drilling in 22-14-11 northwest of the Youngstown pool has at last succeeded in getting the iron drilled up and the well drilled two feet deeper into the sand and has a showing for a genuine oil producer. He will build tankage and drill in at once. Mr. Phillips is out of town, having stated when leaving that "inasmuch as a watched pot never boils," he had decided to go away for a few days and would be back Monday. Gladys Bell Oil company, who own the Riley-Thompson farm, also in 22-14-11 north of Mr. Phillips' well, will immediately drill and appears to be well inside the money. Both Mr. Phillips and Mr. Stebbins have always figured that the Youngstown pool trend would pick up again toward the northwest. There is a lot in keeping in line with the trend.

The Chaffer Income Tax Decision

The decision of the supreme court of the United States in the C. B. Shaffer income tax matter seems to indicate that although he has paid his income tax in Illinois he is also liable and must pay in Oklahoma. Now the question arises will Tulsa operators pay a state income tax in Oklahoma on incomes derived from property in Texas, Kansas and Louisiana. It is all very interesting and very discouraging to the man who has oil property.

Blew Out the Bradenhead

The Gladys Bell Oil company well in 18-8-10 east of Holdenville blew out the Bradenhead Sunday last and made a 25-barrel flow of oil which was followed 12 hours later by another that indicated there was some sands, which were found at various depths, but were passed up and the well shut in for a 20,000,000 gasser at a total of 1,900 feet. Inasmuch as good sands were encountered at 900 and 1,600 feet, it is impossible to tell which of them is making the oil. When first reported at this desk a few days ago it was not mentioned that the well was making oil, but that the gas from the upper sand had blown out the connection. This, of course, was erroneous and the finding of oil in paying quantities seems to justify the prediction in this column that oil would be found east of Holdenville. The usual comment around the lobby is that Grant Stebbins, owner of the Gladys Bell, is "lucky enough to get a big pool down that way."

There are two lines from the above well that supply Holdenville with gas and have been in operation since January 1. It looks now as though the Gladys Bell, which is drilling so many wells in line with the big well mentioned above, is due for a great cleanup.

In the Tiger Flats

The Barbara Oil company drilling on the A. K. Ewing farm in the center of the west line, northwest southwest, 22-12-12, Okmulgee county. Top of sand 2,163 feet in 2,186 feet, where they got 20,000,000 feet of gas. The oil was found from 2,186 to 2,196 feet and the well made 150 barrels. The importance of this well can hardly be overestimated and is well worth repetition here.

In Kansas

Aiken and others are drilling at 2,557 feet on the Carmichael farm in Marion county, Kansas, in the southeast, southwest, southeast of 3-22-4. This well appears to be a good well, six inches in the sand and the hole full of oil.

Stryker Bros. are drilling a nice gas well in the center of the line in 18-30-13, Elk county, Kansas. This well had a showing of oil at from 722 to 743 feet and is estimated at about three barrels from 1,390 to 1,400 feet and at about 20 barrels from 1,400 to 1,545 feet.

Ottawa Oil & Gas Co. is drilling at 1,591 feet in 29-9-5w in Ottawa county, and going deeper.

L. E. Bedford is drilling in Butler county, Kansas, Fox Bush pool, in 12-29-5. This well showing full of oil at 2,852 feet, and flows some occasionally. This well is estimated at starting off from about 50 to 100 barrels per day.

Early Bird Company Absorbed.

Following a directors luncheon in the Kennedy restaurant yesterday the Davenport Petroleum company announced it had absorbed the Early Bird Oil, Peerless Petroleum and United Producing & Refining companies. Iowa money is financing the consolidated company. Nineteen stockholders from that state attended the Early Bird meeting on Thursday. The company which is capitalized at $2,000,000 is chartered under the Oklahoma laws and has production and leases in Osage and Washington counties, Burkburnett; Butler, Miami and Neosho counties, Kan.; and Muroe county, Ky. Offices are in Tulsa and Bartlesville.

Wilcox Operations.

Mounds district: H. F. Wilcox has set 10-inch casing at 660 feet and is now drilling at 750 feet on No. 1 Robert Terry Bell farm in 5-15-13. He has a fair showing from the Wilcox sand at 2,963 on No. 3 Lula Eubanks in 32-16-11, the well is gradually being drilled in and is the first Wilcox sand well in this immediate territory. His wells Nos. 1 and 2 have been producing from the Dutcher sand for some time on this same lease.

Beggs district: H. F. Wilcox is today pulling the eight-inch casing from well No. 4 in the southeast corner of the northeast quarter Isparhacker farm in 34-15-11, total depth of 2,700 feet and has an excellent showing for oil in the Wilcox sand. No. 1 Coleman in the same section is pumping approximately 75 barrels daily. Field operations have been to some extent crippled for the past week on account of weather and road conditions delaying to some extent all operations and more particularly so those at a distance from the railroad service. On the Banks farm in 30-15-11 Mr. Wilcox was compelled to skid rig on No. 4 after a long and tedious fishing job. Well No. 5 which was plugged back from the Wilcox to the Dutcher sand at 2,575 feet is waiting the results of well No. 13 which offsets this test, the latter being plugged similarly and given a shot in the Dutcher sand has been cleaned out and looks good for 35-barrel producer. No. 15 is 10 feet in the Dutcher sand at 2,587 feet and has a showing of a good well. Well No. 16 to the extreme west of the Wilcox holdings was given a shot in the Dutcher sand and is reported a 75-barrel well. His No. 17 is spudding in on the second hole after being compelled to skid the rig from an ugly fishing job. Well No. 18 is 15 feet in the Dutcher sand at 2,592 feet and looks good for a 250-barrel well. No. 19 on the same lease is drilling by a lost string of tools at 2,250 feet. Well No. 20 after a shot in the Dutcher sand is a 100-barrel natural producer and No. 21 is flowing 150 barrels without a shot. Test No. 22 is drilling at 2,550 feet. No. 23 spudding in. No. 24 is a rig. No. 25 and 26 are rigging up. Rig material is on the ground for Nos. 27 and 28. Mr. Wilcox is also moving in rig material for three deep tests 50 feet from three of his wells in the north boundary which are now producing from the Dutcher sand. His entire holdings in this section now looks good for two producing sands, namely, the Dutcher sand at 2,625 feet and the Wilcox sand found at 3,100 feet.

Kelleyville district: H. F. Wilcox is moving in tools for No. 1 on the Lula Williams farm in 25-18-9. In 18-16-10 he is moving in rig timbers for test No. 1 located in the northwest corner of the south half of the northwest quarter Harry Price farm. He has made arrangements for extensive warehouse holdings at Bristow, Okla., to more effectively satisfy immediate requirements for development in that territory.

Texas operations: H. F. Wilcox is drilling at 1,280 feet on his test No. 1 Barron farm in Fisher county. On the Hodge farm, same county he is drilling at 420 feet. In Baylor county, test No. 1 on the Robinson farm is now drilling at 1,650 feet and rig material is being moved in for test No. 1 on the Mattie Stevens farm, same county.

White Wells Free of Water.

P. J. White, president of the White Oil corporation, states that published reports of the invasion of salt water in the big producing wells of the Homer field of Louisiana are greatly exaggerated.

"This is particularly true in regard to the upper part of the structure" said Mr. White. "Centrifugal tests have been made within the past few days of the oil from a number of the deep sand wells and all of these tests showed only the normal amount of moisture, 1-10 of 1 per cent to 3-10 of 180 per cent.

"It is not an unusual thing for small quantities of water to be found in large producing oil fields, no matter where they are located. This has been the experience in the mid-continent field. Even the Cushing field showed 1 per cent water. This may be regarded as normal.

"The wells in the Homer field which are showing water are located on the extreme edge of the productive area. This situation is not unusual and should not be the cause for any anxiety concerning wells higher up on the structure.

"None of the White Oil corporation's wells have shown any water."—Wall Street Journal.

Heating Chicago Schools With Oil

The plan to heat the Chicago public schools with fuel oil, which was suggested by Harry Sinclair at the time of the coal strike, has made considerable progress and at present there are several of the schools so heated. Work was begun on December 8 and the installation was hurried so that the best results obtainable are not always achieved owing to the lack of equipment. Some of the equipment used in the first schools was what might be called home-made. The system adopted is the steam atomizing pressure system of supplying oil for boiler firing. The supply is contained in two horizontal tanks of 2,000 gallons each so equipped that they may be used together or separately, thus providing for a continuous supply. The tanks are provided with steam heating coils. The main steam pipe was tapped for supplying steam for the burners. For starting the operation of heating the boilers an auxiliary upright boiler was supplied which is disconnected and the fire drawn as soon as the main plant has steam pressure. The burners were made in the plant of the Sinclair refinery, two being installed under each boiler by taking off the coal doors. When in place, the doors were bricked up.—Derrick.

Gilliland Has Nice Well.

Gilliland and Foster have completed No. 10 Jackson in the northwest corner of the south half of the southeast of the northwest in 24-21-8 and have a 500-barrel well at 1,100 feet. This lease is about a mile and a half northwest of the Shaw farm where they have been getting 25,000-barrel wells from the deep sand.

Will Drill Tiger Flats.

It is reported from Okmulgee that Doctor Skelton is making a location in 7-12-12 and the Indiahoma is making a location in 32-12-12 southwest corner of the northwest. This is on the Asbury farm one mile northeast of the Kingwood wells in 1-10-11.

On the Sand.

Vickers, Marshall & Phillips' No. 4 Paris, northeast corner of the west half of the north eighty of the northwest quarter of 20-33-4, has been on the sand several days, but drilling in has been delayed by a cavey hole. The crew was running the 6-inch last night, and Vickers expects to drill in tonight or tomorrow.

A Rumor of a Big Well at Beggs.

There is a rumor in circulation of a well that is showing good, southwest corner of the northeast of the southeast of 31-15-12 which is showing for a big producer in the Tannaha sand at around 2,100 feet.

South of Jennings.

Slick & Jones No. 2 drilling in the northwest corner of the northeast quarter of the southeast quarter of the southwest quarter 35-20-7, Bartlesville sand found at from 2,718 to 2,732 feet, swabbing 20 barrels.

At Billings.

Mid-Co is drilling a well at 300 on the Robertson farm in the southwest corner of the southwest 29-24-1. This well is offset to the discovery well in 30, which is still holding up at better than 200 barrels a day.

West of Beggs.

The Twin State No. 2 Bearhead in 19-15-11 located in the southeast corner of the southeast has reached the top of the sand at 3,076 feet and is now 3,122 feet in the pay sand and has 2,600 feet of oil in the hole.

The Minnehoma Well.

The Minnehoma well in the Osage that started at about 14,000 barrels is now being swabbed as rapidly as possible and is showing a little oil now and then along with oceans of salt water.

East of Beggs.

The Benno Oil company is drilling a well at 750 feet on the Fred Adams farm in the center of the west line of the southeast of the southwest 31-15-12.

Claremore District.

The Mid-West oil corporation have a 30-barrel well in the northeast of the northeast of 10-21-18. It is causing a lot of excitement over that way.

West of the Tiger Flats.

Elmo Oil company No. 1 Harvole drilling at 300 feet in the northeast corner of the southeast of 12-12-10.

Making 400 Barrels.

The Empire company's No. 4 on its Lathrop lease is swabbing around 400 barrels.—Wichita Eagle.

With the Oil Men

Messrs. Ladd & Hannon, well known oil producers, are in the city from Fort Worth and say that the chances are good that some of the Tulsa operators will get oil in wildcat test they are drilling in Texas, that the Wilcox test in Baylor county looks good and that the Sinclair test near Albany in central Shackelford county ought to be a winner. They are now starting the third hole on account of bad luck with the first two. The Ladd & Hannon test, two and a half miles south of Caddo in Stevens county, Texas, is drilling at 600 feet. This well is owned by the Carter Oil company and Paul Konz, well known in Tulsa, has an interest in same. This well is located a mile and three-quarters northwest of the Lone Star Gas company's well on the Warren tract that was reported last week as making 1,000 barrels. Ladd & Hannon are intending to capitalize their holdings and form a producing company and certainly ought to have no trouble whatever in disposing of all the stock they care to sell. They will operate in Oklahoma as well as in Texas and Louisiana. Pat Powers, well known in sporting circles as the former owner of the Madison Square Garden in New York and other ventures, is with Messrs. Ladd & Hannon and is interested with them in the Carlsbad Oil company well mentioned above. They will all be back in Tulsa one of these days, at least to make this their home.

Raymond Shaw, who made The Oil News a popular petroleum publication, is in the city in the interests of the said magazine.

W. L. Levers of New York is visiting here with his old friend Colonel Woodard of the Roxana. He is on his way to the coast.

Frank Craver, president, and Carl Metles, vice president, of the Blackhawk Oil company, left last night on a business trip to New York.

Jesse Finston of the Mid-Co Oil Sales company returned Thursday from a trip to Colorado.

L. H. Weber, popular broker, is back from a 30 days' visit in Kansas City.

J. Edgar Pew, president of the Mid-Continent oil & Gas association and the head of the Sun company, is expected in Tulsa tomorrow.

G. W. Webster, prominent oil producer in the Broken Arrow district, will leave for Miami, Fla., January 22. Mr. Webster is drilling two wells, one of which at least he expects to complete before he goes. It is located in the northeast of 24-19-15 and is drilling at 900 feet. The other is in the northwest of section 25, same township, and here he is moving in. Mr. Webster caught and had mounted the finest specimen of a sail fish last winter that has ever been seen in Tulsa.

W. M. Bartles, who is interested with Gardner-Spencer and others in the good well in the southwest of 19-25-9, which is setting the 5-inch casing and will soon be in shape and is now making 150 barrels, is in the city and is well pleased with the outlook for his company.

W. V. Harner left yesterday for California where he will join his family, who are spending the winter there.

H. P. Perkins of Pittsburgh is looking over the field as a guest of Walter Corrorran. He says that "if all the laws were enforced by the government as they are now enforcing the liquor laws we would now have a millenium. It would put an end to all crime from murder on down."

Wanted—Casinghead Gasoline Plants

Will purchase for cash plants making over 1,000 gallons daily. Price must be right. Write full details.

P. O. Box 1893
Tulsa, Okla.

Northern Louisiana

is the home of the High-gravity Big-Oil Well, found in 3 sands, and costing only $5,000 to $25,000 per well, according to depth. We make a specialty of selling the best there is for sale; close-in-acreage; acreage close to drilling wells, and large blocks of acreage. We advise buying leases instead of buying Oil Stocks. We sell from 5 acres up to Large Blocks at prices ranging from $2 per acre up to $12,000 per acre. Write and tell me the kind of acreage you want and the amount you are willing to invest and I will send you a list covering your wishes.
