Important Deep Test Failure

An important deep test in the Cleveland district is dry and abandoned, it being the Decoma Development company's test on the S. Moore farm, in the northeast of the southeast of the southwest of 24-21-7. A hole was drilled to a total depth of 3,865 feet. The company is entitled to great credit for having made this test and it will go a long ways toward proving the sand found in the line in the Boston farm test of the Gypsy Oil company. Evidently this sand does not extend so far.

Waite Phillips Drilling Operations

Waite Phillips has a rig on the J. Thompson farm which is No. 1 for the lease, the northeast corner of the southeast of the southwest 22-14-11. Waite Phillips and the Clifton Drilling company, on the Henry Thompson farm, have a 600-barrel well found in the sand 2,845-49 1-2, located in the southeast corner of the northeast of the southwest 22-14-11. Waite Phillips, Jane Reed No. 1, located in the northwest corner of the southeast 22-14-11, is drilling at 2,200 feet. No. 3 on the same farm located in the center of the north one of the south half 22-14-11 is drilling at 300 feet. Waite Phillips and Gypsy Oil company, R. Murrell No. 1, located in the southeast corner of the northeast 23-13-11, is drilling at 2,404 feet. No. 2 on the same farm located in the center of the south line of the northeast 23-13-11 is showing 100 barrels in the sand at 2,390 feet. Winey Stake No. 1, located in the center of the south line of the northeast of the southeast 12-21-11, is drilling in the sand at 2,759 feet. Waite Phillips, Roxie Cannon No. 3, located in the northeast corner of the southwest of the northwest 29-26-13, is reaming to 1,328 feet. In the Osage No. 1, located in the northwest corner of the southeast 35-25-16, is reaming to 300 feet. Waite Phillips and D. B. Mason No. 17, located in the southeast corner of the southwest 4-24-12, is completed and flowing 1,200 barrels. Waite Phillips and Delmar Oil company have a rig up for No. 3, located in the southwest corner of the southeast of the southeast 35-25-9. Rig up for No. 1 located in the southeast corner of the northwest 35-25-9.

The Big Well in Wilbarger County

The well drilled by the Prescott Arizona Oil company, twelve miles south and a mile and a half west of Vernon, Texas, is still the center of interest in Texas. This well came in last week and was duly reported in this column and should have attracted a world of attention instead of having been ignored by many of the best oil men in Tulsa. It appears to open a new pool because a well showing for 1,000 barrels in the top of the sand means that something like Healdton or Electra or perhaps Hewitt has been uncovered and the chances are that a lot of the little fellows will repeat the performance at Burkburnett.

This pool will line up with both Burkburnett and Electra and shows that after all the trend is the thing. In fact this trend should include Healdton and Hewitt because a rule laid on the map touches all of these pools. Reports from Wilbarger county have it that there is the maddest kind of a mad rush into the new fields. Trucks loaded with drilling material, pipe, household goods and merchandise are blocking the road from Vernon, and the Fort Worth & Denver railroad has put on a sleeper from Fort Worth, which is set out at Vernon.

To be sure there are a few of the Tulsa oil men who have men on the ground taking acreage, but they are paying tremendous when it might have been had at a much more reasonable figure and it all goes to prove that all the people in the south end of the Mid-Continent field have been overlooked by Tulsa operators who eventually get into the game at great cost.

When oil is found as it is in Wilbarger county at the comparatively shallow depth of 1,770 feet in a true oil sand and not lime, it means that there is going to be big production and that there will be mighty quick development. The chances are it will be a rotary proposition eventually, although wells are being drilled at present with standard tools.

Another remarkable fact has come to light and that is, that the little town of Vernon with only fifty-five hundred people is drilling without outside help, about sixty test wells in Wilbarger county and have never asked outside people for a dollar of contribution.

Wrightsman Gets a Surprise

C. J. Wrightsman drilling at the very shallow depth of 450 feet in his test in 19-23-9 encountered a new oil sand which hereafter should be called the Wrightsman sand and there was 20 feet of same, all of which is pay. The well is making 80 barrels after a shot of 20 quarts and indicates a new and hitherto unheard of sand which, while it has encountered in spots has never carried enough oil to even be worth mentioning. It is understood that many new rigs and machines are being moved to the well and that the Peters Oil company has made three new locations offsetting the well. Reports from Pawhuska indicate that the new sand has caused a lot of excitement.

Magna Drilling Report

In Fox-Bush Pool, Butler County, Kan.

Fox No. 4, in the northeast corner of the southwest quarter of the northwest quarter of 13-29-5, is spudding in, in the northwest corner of northwest quarter of northwest quarter of the same section. Both of these wells are offsetting good producers. Naden No. 4, in the southwest corner of the southeast quarter of the southwest quarter of 12-29-5, is drilling at 2,600 feet. Bush No. 14 in 24, offsetting to the south Naden No. 4, is underreaming at 1,550 feet. Bush No. 15, in the northeast corner of the southwest quarter of the southwest quarter of 24-29-5, is now rigging up. This well is a direct offset to a well that came in at 150 barrels. Bush No. 16 in the center of the west line of the northeast quarter of the southwest quarter of 24-29-5, is hauling rig. This location lays between wells No. 10 and No. 11 ,both of which are large producers. Warner No. 1, in the northeast corner of the southeast quarter of the northwest quarter of 25-29-5, is due in this week. This well also offsets one of the best wells in the pool. Warner No. 2 in the southeast corner of the southeast quarter of the northwest quarter of 25-29-5 is rig built. This is also an offset. The Magna has 1,850 acres in the heart of the pool and practically all proven.

The Magna also has a big well in the Hewitt field as the following wire to The World will show:

The Magna Oil and Refining company drilled in a well today on the J. B. Champion farm that is producing oil at the rate of 60 barrels an hour. The top of the sand was found at 2,260 feet. This is a southeast edge well in the Hewitt pool 15 miles west of here.

In the Garber Field

By KAY PETERS

GARBER, Okla., April 3.—The Mid-Co Petroleum & Humphries Petroleum Co. has completed a 600-barrel well offsetting the well they brought in some months ago on the Wilkins farm in 30-24-1w, six miles east of Billings. This is a new pool as these wells are over six miles from production. The new well is in 29-24-1w and the top of the sand was reached at 1,992 feet. When the Wilkins well came in the companies paid little attention to it, as it acted to them like a freak. But, it has held up its initial production of 235 barrels a day and is as good a well now as when first completed. The new 600-barrel well added to the nice behavior of its offset, makes the Mid-Co people a lucky crowd. These wells are on 1,000 acres, it is said the Humphries Petroleum company gave the Mid-Co for a test well. The dope is that the pool runs east and west for a mile north of it a dry hole was drilled and a half-mile south is another failure. Two miles north and a mile east is where the Humphries bunch drilled to some 4,480 feet.

In the Bull Bayou District

Reports from Louisiana are to the effect that the W. G. Strang No. 1 William in 6-10-12, located in the southwest of the northwest is dry and abandoned at 3,170 feet.

Shaffer's No. 2 Robinson in 8-12-10 is a 200-barrel well.

Gilliland No. 5 Pugh in 12-12-11 is a 500-barrel well.

The Bull Bayou Homer No. 2 Nelson, in 31-13-10 is making 1,500 barrels.

That Sun Company Well

RANGER, Texas, April 2.—No well that has come in in recent months has so stimulated operations in this district as the E. Y. Jennings No. 2, drilled in Wednesday by the Sun company. It touched the black lime at 3,220 feet and has been flowing at the rate of 100 barrels an hour since.

This well is located four miles northwest of Ranger just over the Stephens county line and is half-mile south of production on the I. C. Dennison tract. It opens up considerable new drilling possibilities.

Sufficient storage capacity was placed at the well Thursday to take care of the flow until pipe line connections are completed. Hundreds of interested oil people visited the well Thursday and regard it as the best find in this district since the big boom days of 1918.

Healthy Twin Wells.

In the Garber field the Cootie Oil company has just completed a well that is estimated at 500 barrels in a sand from 1,551 to 1,572 feet. It is their No. 10 on the Lynds farm in the middle of the east line of the southwest quarter, southwest 7-22-3w, three miles south of Garber. It is 20 feet from its twin No. 9, which had an initial production of 1,500 barrels at 1,300 feet. No. 12 is a gas well, estimated at 400 pounds rock pressure, in a sand from 1,447 to 1,455 feet.

The big gas well of the Pacific-Wyoming Oil & Gas Co. No. 1 on the Walcher farm, near the middle of the southwest 7-22-3w, in a sand from 1,130 to 1,150 feet, is attracting attention, as it is three-quarters of a mile north of production. This heavy gas flow, to many, all but guarantees that it will find oil in the deeper sands. The gas is being saved and the well drilled deeper. The pressure was so strong that it gave the workmen trouble putting on the bradenhead.

With the Oil Men

Patrick McAndrew, president of the Midwest Belting & Rubber Co. has returned from a week's trip to Ranger, Burkburnett, Wichita Falls and their Fort Worth branch. He reports an increasing demand for Azak drilling belt.

OIL AND GAS

Leases, Supplies, Production, Etc.

Lease salesman wanted with good credentials. Address Box 282-B, World.—Advt.

Forty-acre lease near Kiefer; re shot; $1,000; drill well 90 days. Address Box 266-B, World. —Advt.

Wanted—Acreage at Beggs and Jennings. Will consider drilling proposition. Spangler & Waxler, 506 Kennedy Bldg.—Advt.

Young college man, experienced, pds, titles, pencil reports; wants position with oil company. Address 8-B, care of World.—Advt.

Fifty barrels production on 40 res; Regge district; settled; Dutch-sand; price $125,000. Address Box 264-B, World.—Advt.

Wanted, string of standard tools with contract preferred. Must be in d condition and at reasonable ice. Call phone Osage 959.—Advt.

For Sale—Oil and gas leases; 110 res, shallow field, Nowata county; 6 acres in sections 22 and 23, Rogers county. Address Box 6, Claremore, Okla.—Advt.

Auditor, 16 years' experience; miliar with income tax law; capable of taking charge of office, desires position with oil company. Address 960-B, World.—Advt.

Wanted—Good pumper with year experience. Six wells making 15 rels near school, in edge of small town. Healthy location. $125 per month. Address P. O. Box 244, West Tulsa.—Advt.

For Sale.

Departmental lease on 92 acres in tp. 18, range 5 east, northwest of Ashing at a reasonable figure. Must be sold this week. Address 872-B, care World.—Advt.

Attractive drilling contract; 160 res in Rogers county; offset opposition to well that was drilled some time ago but never put in operation. This property has been a bargain to investors. Call at Room No. 212, New Ault Bldg., or phone Osage 7665.—Advt.

I am superintendent of several gasoline plants for large company, long experience in planning construction and operation of plants. Well educated and competent to assume full charge of anything in this line. Dissatisfied and wish to connect with growing company. Welcome closest investigation. Address Box 290-B, care World.—Advt.

Dependable Power from Cheapest Fuel

Here is an engine that will operate for long periods, using as fuel any of the cheaper grades of distillate, fuel, or crude oils, assuring the most dependable power and show an immense saving in the power costs of pumping and compressor outfits where 15, 20, 25 or 30 H. P. is required.

It maintains lowest fuel consumption. As near completely automatically lubricated as is possible. No water injected into combustion chamber, thereby maintaining low temperature and better lubrication of cylinder and piston. Perfect crank compression at all times. Quick starting. Sensitive governor, close, accurate speed regulation. Extra large bearing surfaces tend for long service and low maintenance cost. Simplicity of parts. Can be operated for long non-stop runs with minimum attention.

OIL LEASES FOR SALE

In Famous Bull Bayou Field, Louisiana

Strategically located close to producing wells and in the proximity of many wells now being drilled.

The completion as a producer of any of the wells now being drilled near these leases should enhance their value materially.

These leases surround and checkerboard the famous Bull Bayou oil pool and can be purchased at reasonable figures pending the completion of wells now drilling.

All leases have been carefully selected and titles have been approved by eminent attorneys.

Leases for prompt delivery with clear title.

RED RIVER PARISH, LOUISIANA.

		Sec.	Township	Range.	Price per acre
20 Acres—One-half undivided interest, including well now drilling—		9	12	10	$5,000.00
