Mines and Mining Stocks

IS COLORADO IN DEEPER ORE BED?

Drift From North Shaft in Ore 100 Feet Below South Shaft.

NO DOUBT OF FISSURE

SURE OF RICHES AT DEPTH ON THAT ZONE IS KNIGHT.

"There is not a question that below the Colorado ore bed is a strong fissure extending to great depth, and other ore bodies will be found below the one from which the mine's production up to this time has been taken."

Such is the positive statement made yesterday by Uncle Jesse Knight when discussing conditions in various mines which he controls.

"As to there being a fissure," he continued, "we have positive evidence; it is a statement which cannot be controverted. As to there being ore shoots below the first ore bed no one who knows the Tintic formation can doubt. All of the old mines of the district are deep mines, as every one knows; in none of them have been sounded the depths to which the ore bodies extend. There is absolutely no reason to believe otherwise than that like conditions will be found to exist on the Colorado zone.

"From the north shaft of the Colorado we are driving south in good ore at 100 feet greater depth than is the ore body which is being followed northward from the south shaft. We regard this as pretty good evidence that the north shaft is in a lower ore bed in the fissure, although that has not been proven absolutely for the reason that some distance remains to be driven to connect up between the two shafts.

"In the Iron Blossom No. 1 shaft, a fissure 30 and 40 feet wide has been proven to the depth of 1,100 feet. The fissure has been cut in every level but one. It is almost perpendicular, dipping slightly into the hill and toward the shaft. On every level we have cut small shoots or lenses of high-grade ore. The quantity of the ore obtained has not yet been satisfactory, except as an indication of greater things at depth. Conditions are such that there can be no doubt of a big mine in that fissure at great depth, and our policy as to the work in that portion of the property is to attain the requisite depth as rapidly as possible.

"In Beck Tunnel we have been prospecting for an ore body on the 1,100-foot level which might serve to help out on expenses, but the same policy of getting to the deep ore bodies will be followed there as closely as possible. The ore is there; it is simply a matter of getting it."

San Francisco Quotations.

WEEK'S ORE SHIPMENTS FROM TINTIC MINES

Eureka, Sept. 17.—Ore shipments from mines of the district for the last week:

Centennial Eureka	28
Eagle & Blue Bell	2
Yankee	2
Uncle Sam	7
May Day	2
East Tintic Development	2
Scranton	4
Carisa, lease	1
Iron Blossom	10
Gemini	1
Bullock	1
Sioux Consolidated	16
Ajax	4
*Colorado	20
*Dragon	51
*Beck Tunnel	2
*Iron Blossom	41
*Swansea	1
*Salvador	1
May Day Con	1
Total	219

*—20-ton cars.

In addition to the 20-ton car lots noted above, the Tintic smelter received 14 50-ton carloads from the Day mine, Ploche, and 12 from the Horn Silver mine, Frisco.

MINING STOCKS NOT SO STRONG

Sales of Sioux and Tintic Central Heavy at Bargain Prices.

The mining stock market yesterday suffered another slight relapse. The new buying movement which was in evidence the first of the week failed to hold, and with the falling off of orders the small gains were in many cases lost. Several large lots of Sioux Consolidated changed hands at the bargain prices of 63c to 61c; Grand Central was in light demand at $2.57½ to $2.52½; Iron Blossom sold from $1.17½ down to $1.10 and closed at $1.12½; sales of Tintic Central were heavy at 7⅜c to 7c; Dragon Iron saw new activity at 25c to 22c, and sales of Mineral Flat were recorded at 5c to 4¾c. Iron King was reasonably strong at 17½c, as was Daly-Judge at $5.25 and $5.30, while Crown Point was in some demand at 8¼c to 8½c.

There was little bidding for unlisted stocks, with virtually no price changes. The sales included 500 shares of Uintah Treasure Hill at 10c and 500 shares of Ely Witch at 12c.

Total number of shares sold, 136,445; value, $36,544.15. Closing quotations and the day's sales:

SPIRO'S MINES SHOW RESULTS

Nice Ore Bodies in Little Bell and the Silver King Consolidated.

Important results attending development in both the Silver King Consolidated and the Little Bell mines of Park City are reported by General Manager Solon Spiro. Ore is being followed both east and west on the contact vein recently opened on the 1,600-foot level of the Silver King Consolidated, and within the last day or two the expected widening of the ore body has taken place. Ore is in both sides and roof of the drift now, Mr. Spiro says, and it is making strong into the bedding planes in the lime.

One of the surprising features is the large gold contents of the ore. Material in the bottom of the drift shows values of $16.40 gold and 64 ounces in silver, while in another place is one foot of gangue material which gives assay returns of $20.40 gold, 27.8 ounces in silver and 11.8 per cent lead and 1.75 per cent copper. In the raise which is being driven is ore which goes $23 gold, 38 ounces in silver and 28.3 per cent lead.

Where the ore body is widening the ore is strongest and the highest values are shown.

The Little Bel lore body, first opened by a winze sunk 250 feet from the 700-foot level, is proving up handsomely. The drift which is being run on the contact shows the ore opening extensively on the contact, on the hanging wall and in the bedded planes.

The Little Bell ore body, first opened by the Little Bell has been settled for upon controls showing 80 ounces in silver, 23 per cent lead, 2.3 per cent copper and 85 cents in gold—approximately a $60 product. The second lot is on the way to the smelter, and as only ore taken out in doing development work is being produced, the outlook for future earnings is flattering.

COLUMBUS CON. HAS NEW ORE BODY ON 400

A new body of ore in entirely new ground is being opened on the 400-foot level of the Columbus Consolidated company's mine at Alta, according to information released yesterday by General Manager Tony Jacobson. The strike has been made in a drift started on a contact about midway between the main shaft and the big west ore body. The contact is being followed in a southeasterly direction, and it looks as though the ore might be continuous to the intersection with the big vein, nearly 300 feet distant. Should this be the case it means a very important ore body, and its development will be watched with much interest.

Shipments continue to be made by Columbus Consolidated at about the usual rate of approximately 50 tons a day. The company has between the sampler and the smelter 25 carloads, or about 1,000 tons of ore, which, of course, is unsettled for. And it has received returns of $8,000 for ore since the first of the month, thus showing a volume of business which is not half bad.

Tribune-Reporter Printing Co., 66 West Second South. Phones 718.

ELY PROPERTIES PLEASE ECCLES

Railroad, Mine and Smelter Are All Making New Records.

That the Nevada Consolidated Copper company and the Nevada Northern Railway company are breaking records at a rate which is pleasing to S. W. Eccles, their executive head, is evident from the conversation of that gentleman yesterday upon his arrival in this city from Ely.

With three engines and three train crews, Mr. Eccles said, the Nevada Northern railroad is handling 6,000 tons of ore every day in the week. This is work which he believes has not been duplicated. The Nevada Consolidated is producing all of that ore.

Another accomplishment regarded as important is that represented by the fact that the Steptoe smelter is so nearly completed that it is expected to be in full commission not later than Jan. 15. The plant comprises five blast furnaces and five reverberatories and the completing of the great plant within three years' time is without doubt a record.

Mr. Eccles declined to say just when Nevada Consolidated would pay its initial dividend, but he declared that the date was not far ahead.

TINTIC SMELTER TO CLOSE ABOUT OCT. 1

That the Tintic smelter will be closed about Oct. 1, to remain closed indefinitely, was announced yesterday by officials of the company. Ores of the Knight mines are to be diverted to the United States company's smelter at Bingham Junction. Inability to obtain the kind of ores required for fluxing the silicious ores of the Tintic district is the reason given for shutting down the plant at this time. It is intimated that should it be possible in the future to contract for delivery of the kinds of ore required the furnaces will be blown in again. It is asserted unofficially that one of the reasons for closing down is the large amount of money required to be tied up in ore advances without adequate return. In other words it is another example emphasizing the fact that a small custom smelter is not likely to pay. Mr. Knight finds that he can make more money when patronizing other smelters than his own.

BOSTON IS EXCITED BY COPPER RUMORS

Exciting rumors affecting the copper metal market were reported to Pollock & Co. yesterday by Paine, Webber & Co., of Boston. One of the reports was that a sale of copper amounting to 150,000,000 pounds had been made, and another was that the copper production is to be curtailed and the price advanced immediately to 15 cents a pound. While authentic information appeared to be absent, the tape, it was said, indicated a betterment of the copper situation and higher prices for the stocks. A block of Arizona Commercial had been purchased at private sale and it was believed that the stock would cross 50, with other coppers advancing in sympathy.

PIOCHE KING IS MAKING MINE

Surer Than Ever of Opening the Prince Ore Bodies Are the Owners.

More confident than ever before that the Pioche King Mining company is to pick up extensions of the great ore bodies in the Prince mine, adjoining, were John A. Kirby and W. H. Webber upon their arrival home yesterday from Pioche, where they had been occupied several days making a close inspection of the Pioche King workings.

"In the face of the west drift the formation changed yesterday," said Mr. Webber, "and the shale is identical with the formation in which the east-dipping fissures occur in Prince Consolidated. The ground is heavily mineralized and looks right for ore. There are no visible faults or displacements in evidence either underground or on the surface between the Prince shaft and the Pioche King shaft. We made an extensive trip through the Prince and found the ore and indications showing strength on all levels driving north toward the King endline, and there is no reasonable probability that the fissures will not continue into the King or that we will not encounter and develop such a series of ore shoots and ore bodies in the Pioche King as they have in the Prince. Mr. Lloyd, superintendent of the Prince Consolidated, insists that we are sure to do so and Mr. Kirby and I feel much encouraged by conditions as we find them underground in the King.

Can Save Ore on 200 Level.

"The bedded vein encountered on the 200-foot level is showing up strong and well defined, with a tendency to widen as the drift is extended westward on the fissure. Galena and much carbonate are scattered all through the quartz and I think we can save the ore to good advantage.

"The cross-cut on the 300 level is out 290 feet and although several small fissures have been cut on the way the face is in the most encouraging formation yet encountered. It appears possible that we shall not have to drive so far as we had figured to cut the big fissures.

"At a point 200 feet in the east cross-cut Mr. Kirby has decided to drift both ways on a large and heavily mineralized fissure. It shows much manganese and a little lead. A bedded vein intersects the fissure, the hanging wall of which shows just above the floor of the cross-cut. This bed seems to be raising to the north and east. By driving along the fissure we will prospect the bed and the fissure and I would not be surprised if we opened up an ore body or a series of them as we drive.

"The Prince ore zone is being prospected and developed in a systematic manner for a distance of over four miles and I predict good, substantial results in the near future all along the big fissure, which is known to extend for that distance.

"The Pioche Metals company is making a splendid showing at the Point property. A winze sunk sixty feet below the 100-foot level is in ore continuously, some of it high grade shipping material. The winze is being continued and is going down in solid ore, the high grade occurring on the hanging wall and showing in places over three feet in width, with values running high in silver, lead, copper and some gold. The balance of the vein varies from three to ten feet in thickness, being a lower grade manganese ore. A shipment of the best ore is piled in the bins.'

Ores and Bullion.

Smelter settlements yesterday, reported by McCornick & Co.: Ore, 820,- 960; bullion, $60,000.

Ore at Samplers.

Ore receipts, by carloads, reported yesterday by the samplers: Taylor-Brunton—Utah, 3. Pioneer—Utah, 4.

Mining Notes.

Patrick Ryan has gone to Duluth, Minn., on mining business.

Howard Tibbals expects to leave next Monday for Oberlin, O., to enter upon his senior year in Oberlin college.

William H. Tibbals will go to Seven Troughs district next week, accompanied by Engineer D. P. Rohlfing, to outline a development campaign for the Seven Troughs Monarch Mines company.

The Bingham Butte Mining company has made the first substantial payment upon the adjoining property which it recently took over and it is said that it is being financed for an aggressive campaign. P. J. Donohue is in New York in the interest of the company.

Train Will Leave Salt Lake at 1 P. M.

Via O. S. L., effective Sept. 12, to connect with overland trains at Ogden.

LUCY L. MAKES TUNGSTEN FIND

Strike in the Deep Creek Mine Is Believed to Be Very Important.

A most important find of tungsten ore has been made in the Lucy L. company's mine in Deep Creek, according to advices and samples received from camp yesterday by Manager Frank L. Wilson. In the upper side of the big copper vein which courses through the property have been found outcroppings of the tungsten ore twelve and twenty feet in width, and trenching indicates that the ore is getting stronger at depth. The tungsten vein appears to be making in the copper vein, which is 250 feet wide and shows a world of concentrating ore.

Samples of the tungsten ore, analyzed here, show contents of 66.6 per cent tungsten acid. Some of the samples are pure crystal, of too high grade to need testing by the assayer. The high grade samples are found in gangue material, which itself bears evidence of carrying tungsten, and Mr. Wilson believes that he is about to open one of the most important bodies of tungsten ore ever found.

The only important producers of that mineral in this country are those near Boulder, Colo., and a few mines in California. Use of tungsten having been recently greatly extended by the perfecting of tungsten light, the price of the material has advanced considerably, and experts predict further advances. At present prices the richer of the ore uncovered in the Lucy L. would be worth more than $600 a ton.

Cafeteria.

All tourists eat at Kniefel's Cafeteria, 117 South Main.
