Mines and Mining Stocks

SAYS ELY BOOM IS WARRANTED

Recent Events Enhance Fortunes of the Smaller Companies, Says Levy.

The new movement in the cheaper stocks of Ely is not only fully warranted, in the opinion of S. M. Levy, general manager of the Ely Consolidated Mining company, but it promises to gather momentum as the situation becomes better understood. The movement had its real inception, he believes, from the showing of extremely low cost production made by Nevada Consolidated. That was what first set investors thinking of Ely. Then came the discoveries of direct smelting ore in the lime-porphyry contacts and the taking over of more properties by the Cole-Ryan interests to add to the conviction that Ely is permanently on the map as a great copper camp.

"The opening of ore bodies in the contact veins is highly important, as affecting the future of the district," said Mr. Levy. "It eliminates the almost prohibitive constructive cost which confronted many of the smaller companies before they could hope to place their properties upon a paying basis. Market is already at hand for the direct smelting ores without the enormous expense of building large mills in a country in which water and fuel are scare commodities."

The ore encountered on the 400 level of Ely Consolidated company's Brilliant shaft is a chalcopyrite carrying from 3.25 to 4.25 per cent copper and from $3.15 to $5.40 in gold. The drift had been run 125 feet alongside of the ore body when, just before he left camp, Mr. Levy gave orders for the driving of a crosscut and a raise into the ore. Both faces were in the ore fully as strong as ever when he left.

Has Ruth Porphyry.

The vein is in a contact between limestone and quartz porphyry. The porphyry is the same as that in the Ruth mine of the Nevada Consolidated, except that it does not carry commercial values. The drift in which the strike was made is being run to intersect a cross fissure in the lime, about 150 feet ahead of the present face. The cross fissure is making for the contact, affording the best possible opportunity for the making of a large ore body at the intersection.

The showing in the Brilliant workings led Mr. Levy to resume operations in the Zack shaft. Work has been started on the 400 level of the Zack, just above the water, where a body of nice looking copper ore had been disclosed before work was shut down.

The advance of something like $00 per cent in the market value of Ely Consolidated stock, made in the last month, is justified, Mr. Levy says. The company has an excellent chance of opening a paying mine, and its financial condition is good. Enough money is on hand to continue working at the present rate for several months, and in the treasury is a block of more than 100,000 shares of treasury stock with which to meet emergencies.

COLORADO DOES TOBOGGAN ACT

Old-Time Leader Is Forced Down to $1.10 by Professional Work.

Yesterday it became Colorado's turn to do an extra stunt on the toboggan. Starting at $1.30, which nearly everyone believed to be the bottom price, it was forced down to $1.10 on the morning call. In the afternoon it sold as high as $1.20 and closed at $1.15.

Asked how this could be done when a stock was already admittedly selling far below mine value, and with no unfavorable developments in the mine, a member of a leading brokerage house declared that it was easy.

"A certain crowd on the exchange simply decides that a certain stock is to be pushed down," he explained; "concerted, persistent offerings quickly break the price a few cents, in the absence of support; then the margined stocks are called in, and there is virtually no bottom to the market.

"Precisely the same tactics by the same crowd killed our market following the boom of seven and eight years ago," he added. "The people who are doing it apparently care nothing for the future; they are satisfied with the scalps that they are enabled to take from day to day, and those who attempt to do a legitimate brokerage business are the sufferers—with those, of course, who have bought stocks for investment upon mine showings, and such mine operators as may need to raise money for development. Considerations involving the life of the exchange or the welfare of the mining industry have no part in the operations of the professional scalper."

Iron Blossom was active and reasonably strong at prices a little above the new low level of 65c which it touched the day before. Columbus Consolidated, which on Thursday dropped from 80c to 70c, was permitted yesterday to climb back to 84c. Sioux Consolidated was strong at 69c to 68c, and new demand for Utah Consolidated made that issue active at 7¼c to 9¼c.

Total number of shares sold, 94,193; value, $40,594.47. Closing quotations and the day's sales:

IRON BLOSSOM ORE TURNS WEST

Will Extend to No. 1 Shaft, Is the Declaration of Prof. Jones.

Prof. Marcus E. Jones, well known geologist, who has made a close study of the Tintic formation, scoffs at the report that Iron Blossom is out of ore. He visited the mine within the last few days. He declares that the ore body has turned westward, following the limestone; that it may extend as far as the No. 1 shaft—not alway carrying high values, as a matter of course, but yielding well enough to make Iron Blossom a good producer for a long time to come.

"The only reason that they are out of ore is that they are driving into the porphyry," said the professor, "and that is not at all necessary. It was plain from the first that the porphyry would be encountered where it has been encountered, and it was a foregone conclusion that the ore would not make in the porphyry. But there is plenty of room for it to continue to make in the lime, and it is making there. The only thing required is to follow it in its more westerly course.

"There is no reason to be afraid of Iron Blossom. It has ore in sight to pay dividends for a long time to come, if it is properly managed, and its prospects for opening more bodies of pay ore are bright, indeed. On the 1,100 level of No. 1 shaft is a streak of ore which runs about 20 per cent copper, some of it going as high as 50 per cent copper. On another level of the same workings I saw a nice body of shipping ore which at this time is not being touched."

Black Jack Continues Good.

Highly favorable conditions were found by Professor Jones in the Black Jack mine. He believes that it would be possible to place that mine upon a paying basis within three months. On the 1,400 level, he says, are fine bodies of sugar quartz and oxide of iron, carrying some copper values, with unmistakable evidences that the major portion of the values has been leached to yet greater depth. He believes that sinking a few hundred feet more will result in bringing in a big mine.

SUNSHINE PRESIDENT HERE.

Performance of Mercur Mine Pleases Boston Man.

A. W. Chesterton of Boston, a director of the Consolidated Mercur Gold Mines company and president of the Boston Sunshine Mining company, operating in Mercur camp, arrived in the city yesterday to look after his Utah interests. Naturally, Mr. Chesterton is pleased with the record which is being made by his Boston Sunshine company. Organized about one year ago, when the public was offered its treasury stock at 20 cents a share, that company has for the last six months been mining and treating 125 tons of ore a day and the last three months has been paying dividends at the rate of better than 80 per cent a year on the promotion price.

The first dividend paid by the company was at the rate of three cents a share, and the two subsequent payments have been two cents a share each, with every prospect of monthly distributions at that rate being continued indefinitely.

ELYS ARE CLOSELY HELD.

Local Unlisted Stocks Are Given a Turn on Market.

Unlisted mining stocks were less active yesterday than at any time since was begun the movement in the cheaper Ely issuse, which are evidently being held for higher prices. Sales: Ely Witch, 900 at 25c; Bingham Central Standard, 300 at 37c; Opex, 1,500 at 18c to 20c; Uintah Treasure Hill, 2,000 at 10c; Bingham Standard, 500 at 18c. Closing quotations:

SILVER ISLAND'S NEW STRIKE IS RICHEST YET

Assay returns received yesterday from the newest strike in the property of the Silver Island Coalition Mines company show total values of $371.32 a ton, there being 555.18 ounces of silver, 28.56 per cent copper, 18.5 per cent lead and 40 cents in gold.

The strike was made on the south end of the Emancipator vein, in a tunnel just started northward, which had passed through several feet of wash and broken ore to find the vein in place. The high-grade streak at that point is eight inches wide. At other points where the vein has been opened the streak is 15 and 18 inches wide, but the values from the narrow place are the highest yet shown. Six sacks of the high-grade ore were taken out the day the strike was made, and indications were that better results would be obtained as the tunnel was pushed further into the hill. A second tunnel is to be started at once at 60 feet lower vertical depth than the one in which the strike was made, soon affording about 160 feet of stoping ground.

Work is being continued in several other places in the property, all in shipping ore. Teams are due to commence today hauling the ore to the railroad for shipment.

SALT LAKE MEN WILL PUSH NATIONAL LEASE

Interested with R. M. Edmunds and E. Reinhart in a lease in the high-grade camp of National, W. J. Blake of this city has gone to Nevada to confer with his associates concerning future operations. The lease in which Mr. Blake is part owner is on the Mayflower, which is about midway between the property of the National Consolidated company, which has made many shipments of phenomenally rich ore, and that of Brown & Cundy, on the same vein, where a strike was made last week. Mr. Edmunds has charge of the work on the lease, and it is the intention to push developments during the winter months.

Mining Notes.

W. H. Tibbals and D. P. Rohlfing expect to leave tomorrow for Seven Troughs district to formulate plans for future operations in the property of the Seven Troughs Monarch Gold Mining company.

Robert N. Bell, former state mine inspector of Idaho, is in the city from his home in Weiser to look after his Utah mining interests.

George H. Dern, general manager of the Consolidated Mercur Gold Mining company, came in from camp yesterday.

OPOHONGO HAS FINE ORE BODY

Strike in Neighbor May Mean Much for Black Jack Mine.

In the Opohongo mine, which is being worked by William Hatfield from the 200-foot level of the Black Jack mine, has been opened a fine body of copper ore. When Professor Marcus E. Jones visited the mine a few days ago the new ore body had been opened for 20 feet on its strike, eight feet in height and to the width of six feet with neither wall encountered. The ore averages from six to ten per cent copper. It is getting better as the drift is run south, Professor Jones says, making a good outlook for the Black Jack company, whose ground it must enter.

The Opohongo is on the Mammoth-Grand Central belt of mineralization, and its present showing gives excellent ground for belief that in it will be developed some of the resources which have been characteristic of those famous producers.

CHAFEY LEASERS ARE MAKING GOOD RECORDS

The camp of Chafey is brightening perceptibly, it is said, despite the attention which is being attracted by its more spectacular neighbor, Bannock. Leasers are doing good work in Chafey—work which promises to make the camp a heavy producer. The McCarville lease is making regular shipments of a good grade of ore to the custom mill. Leasers on the Auburn mine have just received returns from a trial shipment of 12 tons of ore which ran better than $50 a ton. Other leasers on Monroe hill and several in Barber canyon are getting some good ore and should be on the shipping list very soon.

The Black Hole mine is making its regular production of about 50 tons of ore a day, which keeps the company's mill running at capacity.

Wm. Grimsdell

Is again in the job printing business, under the name of Imperial Printing Co., at 37 Postoffice place. Both phones 610. Some jobs too LARGE, but none too small to secure his personal attention.

COPPER FIGURES MAKE SURPLUS

Consumers, Seeing Hand of Producers, Let Them Carry the Load.

While acknowledging that value attaches to the printing monthly by the Copper Producers' association of statistics relating to copper stocks, a member of the firm of Phelps, Dodge & Co. is quoted as saying that were it not for the figures thus presented there would be no surplus of copper.

"Formerly," he says, "brass and wire manufacturers were willing to stock up for a few weeks ahead of their requirements, but now that they know as much about copper as do the producers they are working from hand to mouth on the smallest stocks ever known, and are permitting the producers and selling companies to carry the load."

An official of the Amalgamated Copper company, who was asked concerning a possible combination of copper producers, said: "I can only say that, with one exception, the producers and sellers of copper are today working together more harmoniously for the good of the industry than ever before. If I should make the statement that no negotiations were pending, the events of a week might prove the falsity of my assertion."

It is the opinion in New York copper circles that the so-called invisible supply of copper on the other side of the water is being rapidly depleted. A few months ago this supply was placed by the Rio Tinto Copper interests at 100,000,000 pounds. The belief is now entertained that it does not amount to over 25,000,000 pounds, if it is even as large as that figure. The reduction in the visible supply—copper carried in second hands, by merchants and dealers—is advanced as explaining in some degree the steady increase in the visible supply in London warehouses.

GIROUX READY FOR BIG MILL

Cananea Expert Is Called to Look Into Concentrator Problem.

Needs of the Giroux Consolidated Mining company in the matter of concentrating facilities for its Ely properties are being looked into by David Cole, assistant general manager of the Greene-Cananea Copper company. Mr. Cole is a specialist on concentrating methods; he has been an important factor, it is said, in bringing the Greene-Cananea company's works from a state of inefficiency to one of the highest efficiency.

T. F. Cole, it is known, has the greatest confidence in the Cananea man's ability to work out ore dressing problems, and his having been called to Ely at this time is believed to indicate that the Cole-Ryan people are ready to take the preliminary steps in the providing of large concentrating works for their Ely ores.

UTAH GOLD & COPPER HAS GALENA IN WINZE

Pure galena ore, the richest material yet found in the property of the Utah Gold & Copper company, in Beaver county, has been encountered in the winze, sunk in the first vein encountered in the crosscut tunnel. The winze was sunk by Manager J. T. Breckon for the purpose of testing the vein—to ascertain whether the ore goes down—and the result is, of course, highly encouraging. Drifts have been run on the ore both ways on the tunnel level, with a good showing in both directions, but with the ore getting stronger toward the south.

Ores and Bullion.

Smelter settlements yesterday reported by McCornick & Co.: Ores, $90,000; bullion, $80,000.

Ore at Samplers.

Ore receipts, by carloads, reported yesterday by the samplers: Pioneer—Utah, 5; Taylor-Brunton—Utah, 10; Nevada, 1.

Ore Shipments.

(Special to The Herald-Republican.)

Eureka, Oct. 22.—Shipments of ore from the Tintic district during the week were as follows:

Centennial Eureka, 42 cars; Ridge & Valley, 2; Grand Central, 4; Victoria, 2; Ajax, 1; Bullion Beck, 2; May Day (crude ore), 3; May Day (concentrates), 1; Uncle Sam, 4; Eagle & Blue Bell, 3; Iron Blossom, 17; Colorado, 12; Sioux Consolidated, 18; Beck Tunnel, 1; Opohongo, 1; total, 113 cars.

One car of copper matte was shipped from the Tintic smelter to the Valley during the week.

San Francisco Mining Stocks.
