Oil Veteran Sees Rockport Section as Huge Oil Hole

George Wilkinson, one of the oldest oil men in the United States, spent several days in Rockport last week and while there toured the Aransas pass and the coast, and the Bailey county oil field. He said he was calling for the development drilling of two new oil wells. Mr. Wilkinson, who was present when the first oil well was brought in and who during his long life has made an intensive study of the great American oil fields, says:

"I have made a thorough investigation of the Texas oil fields, as I have been called upon to do in America and have in the World Petroleum convention. I have had one of the greatest oil fields in America within my control. My success in oil is due to the research of the great geologists who have gone before. We must continue to employ the best geologists we can get, and if we do this we will be successful. I have had the honor to be the president of the oldest petroleum association in the world, which will be celebrated
