**77 YEARS OLD**

I am seventy-seven years old, and have had my sight restored at least twenty years by the use of Swift's Specific. My face was a mass of running sores for two years, and physicians said it could not be cured. After taking fifteen small bottles S. S. S. there is not a sore on my body, and I have a new lease on life. You ought to let all sufferers know of your wonderful remedy.

IRA F. STILES,

# FOSTER'S WEATHER

## Storm Waves to Come During the Month of November.

## LOW TEMPERATURE ON NOV. 14

### Job and the Comet—What the Patient Man Had to Say About It—The Great Catastrophe. Traditions, Memories of the Human Race.

(Copyright 1892, by W. T. Foster.)

St. Joseph, Mo., Nov. 5.—My last bulletin gave forecasts of the severe storm wave to cross the continent from the 4th to 8th and the next will reach the Pacific coast about the 9th, cross the western mountains about the close of the tenth, the great central valleys from 11th to 13th, and the eastern states about the 14th. This storm will be at its greatest force in the eastern states.

The cool wave will give the lowest temperature of the fall up to that date, and will cross the western mountains about the 12th, the great central valley about the 14th, and the eastern states about the 16th. Sharp freezing may be expected in the western states before the close of November.

The fourth storm wave of November will reach the Pacific coast about the 15th, cross the western mountains by the close of the 16th, the central valleys from the 17th to the 19th, and the eastern states about the 20th. This will be an average disturbance in its entire route across the continent.

The cool wave will cross the western mountains about the 18th, the great central valleys about the 20th, and the eastern states about the 22d. A low temperature may be expected from this cool wave.

JOB AND THE COMET.

I make the following additional quotations from the book of Job, as evidence that the poem has reference to a great catastrophe by which the human race was almost totally destroyed by a great comet. Speaking of the comet Job says: "Out of his nostrils goeth forth smoke, as out of a seething pot or cauldron. His breath kindleth coals and a flame cometh forth out of his mouth. In his neck strength shall dwell, and want goeth before his face. His flesh being cast for him, as in a foundry immovable. He shall make the deep boil like a pot. The beast shall go into his covert, and shall hide in his den. He is seen under all the heavens, and his light is upon the end of the earth. Hear ye attentively the terror of his voice and the sound that cometh out of his mouth. With clouds he covereth the light and commandeth it not to shine by the cloud that cometh between."

Apply the above quotation to any other meaning than that a comet had struck and was revolving around and close to the earth and the text becomes a meaningless mystery, but apply it to natural laws as I have given and recorded 30,000 years ago and has come to us through history and the legendary memory of the human race and all is clear.

Job, speaking of the great catastrophe as an act of God, says: "He binds up the waters in his thick clouds and the cloud is not rent under them." Here the waters are not in the seas but above the clouds. And, further: "He holdeth back the face of his throne and spreadeth his cloud upon it. He hath compassed the waters with bounds till the day and night come to an end." That is, the evaporation caused by the comet has dried up the seas and daylight and the darkness, leaving only the clouds thus formed shut out the daylight and the darkness leaving only twilight, a natural effect because the earth like Venus, Jupiter and Saturn, was enveloped in thick and perpetual clouds.

Job further says: "The land out of which bread grew in its place hath been overturned with fire." Describing the condition of himself and people, Job says: "Darkness with want and hunger the gnawed in the wilderness disfigured with calamity and misery, they cut grass and the barks of trees and the root of juniper was their food; they dwelt in the desert places of torrents and in caves of the earth or upon the gravel. I was the brother of dragons and companion of ostriches; my skin is become black upon me and my bones are dried up with heat. He lifted up the drops of rain and poureth out showers like floods, which flow from the clouds that cover all from above."

How came Job and his people to be companions of beasts and the ostrich if they had not been driven into dens together by some great outward conflagration? What could be meant by the frequent reference to gravel, flints and gold falling from the heaven if not that which had fallen from the comet?

In Genesis we evidently find a misplaced text where the narrative says: "Then the Lord rained upon Sodom and Gomorrah brimstone and fire from the Lord out of heaven and he overthrew those cities and all the cities of the plain, all the inhabitants of the cities and that which grew upon the ground." This was the conflagration which caused Lot and his two daughters to live in a cave and they believed that the whole human race had been destroyed. This conflagration could not have occurred at that time, for Abraham and his people were near by and they were not destroyed. Nor is there any account of it in the Jewish history. It more probably has reference to the great disaster that occurred thousands of years of years before and which is described by Job.

As evidence in support of these ideas, so decidedly supported by Job and Genesis we find the same strong testimony in the traditions of every people on earth. The importance of traditions — upgrade—should not be overlooked. Errors cannot so easily creep into legends as into written history. An error in written history is not easily corrected, while errors in traditions will correct themselves. Among the millions who preserve their history by traditions it is not easy for one ingenious narrator to succeed in getting a whole nation to accept his inventions, but the historian who has the advantage of a written language may readily impose upon the generations that follow him.

At least it is fascinating to note the similarity of legendary histories found among people who have been, for time immemorial, separated never having had any intercourse or knowledge of each other. These traditions are counsels of the human race and should not be lightly dismissed.

Ovid, about B. C. 43, relates to Phaeton's conflagration which evaporated the waters of the Mediterranean sea, leaving its bottom a bed of dry sand. This probably relates to Job's catastrophe, having been brought down by tradition to the time of the Roman republic.

Among the traditions of the Druids or ancient Britons is the following: "The prodigies of mankind had provoked the great Supreme to send a pestilential wind upon the earth. A pure potent descended; every blast was death. At this time the patriarch distinguished for his integrity, was shut up, together with his select company, in the darkness with a strong door. (The ark?) Here the just ones were safe from injury. Presently a tempest of fire arose. It split the earth asunder to the great deep, the rain poured down from heaven and the waters covered the earth."

This was a tradition two thousand years ago much like Job's description of the great catastrophe.

## Best Oil.
(New York Sun.)

Some days ago we chronicled in our news column the dreadful voyage hither of a bark from India in charge of Captain Dunham, in which most of the crew were stricken with the disease known as beri-beri.

This disorder was called kak-ke by the Chinese over 2000 years ago, when it prevailed in their country extensively. Beri-beri is a Cingalese word meaning extreme weakness. Kak-ke is derived from two Chinese words signifying "legs" and "disease." The habitat of this disorder at the present day is chiefly in Japan, India, New Zealand, Ceylon, the South Pacific Islands and the Dutch East Indies, and it is much dreaded by mariners in these regions, although Europeans are not so susceptible to it as are the natives. The Dutch government has carried out a systematic investigation of beri-beri owing to its prevalence in their colonies, and it has been found to be an inflammation of the nerves, a multiple neuritis very much like that produced by alcohol, but caused in this case by a minute organism. It is probable that it spreads by the inhalation of air containing these germs in a dry state. Thus this disease, too, has been added to the long list of affections known to be due to our invisible enemies, the bacteria, who throng the air and fill our food and drink, ready to pounce upon and devour their human prey at every chance.

Sometimes beri-beri is very virulent, as in 1878, when nearly 40 per cent of the Japanese army was afflicted with it. Occasionally a vessel arrives at a European or American port with severe cases of beri-beri on board. We have had such cases though rarely, in our hospitals in New York and Brooklyn, but the disease never exhibits any tendency to spread much outside of the countries in which it prevails as an endemic. But as the duration of the affection is usually several months in those who recover, one might easily acquire it in the South seas and convalesce in some hospital at an American port.

Captain Durkee's description of the symptoms manifested by his sailors gives a vivid picture of the chief features of the disorder. It began with a numb feeling in the legs and a sense of general weakness in the whole body, making them want to lie down all the time. Then the legs swelled as if there was dropsy. These are, in fact, the important symptoms, for the neuritis is most marked in the legs.

This is one of the interesting bacterial diseases in which the germs have been found, isolated, cultivated in test tubes and then inoculated into animals. Repeated inoculations produce the characteristic phenomena of the disease. The fact that one inoculation does not suffice has led to the supposition that exposure to contagion on one occasion is not harmful, but to catch beri-beri a more or less protracted residence in an infected locality is necessary.

## MAIL BY ELECTRICITY.

### Novel Plan for Hastening Delivery During the World's Fair.

Washington, D. C., Nov. 1.—In anticipation of a large volume of mail and the value of quick transmission during the World's exposition at Chicago in 1893 the details of an elevated road were today submitted to the postoffice department by the United States Rapid Transit company, of Chicago. The plan is to erect this system between the exposition grounds and the Chicago postoffice and by means of an electric cable, situated high enough to clear all buildings along the route, attain a very high rate of speed—200 miles per hour if necessary. Several claims are put forth as to safety, security, low cost of construction and proof against fire or theft while in transit. The proposition of this company is voluntary on its part, and it can not yet be said what consideration will be given the matter by the people. The object of the system is to transmit the mails from the railway depots to and from the postoffices and to and from the World's fair, and also to and from all sub-stations, office buildings and hotels in the city. The system consists of elevated cables with a number of cars mounted thereon, sufficient that will enable them to make five or ten minute trips when necessary. The mail bags are sent up on an elevator, which is placed at each depot, and the bags are deposited on the reception floor, which is above the car as shown in drawings of the depots. When the car arrives and is stopped in position, the slide door is pulled from underneath the bags, which permits them to drop into the car. The car then proceeds on its return trip to the central postoffice. On arrival at its destination and position, the operator pulls the lever and the sliding door is opened at the bottom of the car, which allows the mail bags to drop from the cars into the sorting rooms of the postoffice, and the mail bags that have been sent up from the elevator in the central postoffice are dropped in the car in the same manner, and the car proceeds to deliver such sorted mail bags at the next depot or sub-stations, office buildings or hotels, where it deposits and receives the bags at the main office.

## THE NEGRO IN NEW ENGLAND.

### Statistics that Show a Falling Off of the Colored Population.

The colored race does not increase rapidly in New England says the Boston Transcript. Rhode Island is the only one of the New England states where the colored people were, in 1890, over two per cent of the population. Even there the colored population has, according to the census, fallen off from 2.40 per cent. of the population in 1850, to 2.21 per cent. in 1890. In Connecticut in the same period, the percentage declined from 2.07 to 1.72. In Maine the colored population in 1890 was less than a quarter of one per cent., a decline for the decade, but a slight, scarcely perceptible gain as compared with 1850. The same is true of New Hampshire and Vermont, where colored people make up only .18 per cent. and .39 per cent., respectively, of the population. There were in 1890, 1.05 per cent. of the population, against .91 in 1850. Massachusetts, as in all other New England states, however, their per centage declined during the preceding decade. The census enumerators found 22,578 colored people in Massachusetts in 1890, 1,823 in Maine, 690 in New Hampshire, 1,004 in Vermont, 7,647 in Rhode Island and 12,520 in Connecticut. There is no indication of the forcing of the color line in New England politics in these figures, but there is, on the other hand, the suggestion of a physically decadent race, or at least one that is not holding its own in its social isolation.

### Tried to Leave His American Wife.

About a year ago Camille Barcenas came from South America and took up his residence in Philadelphia. Barcenas is about 25 years old and dresses well. He appeared to have plenty of money. It was understood that he had inherited a large fortune from his mother, and that his father, who is still alive in South America, was a very wealthy man. Yesterday the young man was arrested just as he was about to board the steamer City of Paris bound from New York south, and he is now in Ludlow street jail, where he will remain until he furnishes bail in the amount of $10,000 in an action brought by his wife, Cora A. Barcenas, for separation on the ground of abandonment. The order of arrest was obtained by Charles Heinzelmann, counsel for the complainant, from Judge Montague in the superior court, upon an affidavit that the defendant was about to leave the country.

### Too Much of a Bad.

It is not unusual for colds contracted in the fall to hang on all winter. In such cases catarrh or chronic bronchitis are almost sure to result. A fifty-cent bottle of Chamberlain's Cough Remedy will cure any cold. Can you afford to risk so much for so small an amount? This remedy is intended especially for bad colds and croup and can always be depended on. For sale by N. E. Grammer and J. P. Nicks & Co., druggists.

The Chinese value an old pair of boots which have been worn by an upright magistrate, and the custom of wishing a friend a "happy foot" is still observed all through Europe.

Vile cod-liver oil has lost its vileness in Scott's Emulsion and gained a good deal in efficiency.

It is broken up into tiny drops which are covered with glycerine, just as quinine in pills is coated with sugar or gelatine. You do not get the taste at all.

The hypophosphites of lime and soda add their tonic effect to that of the half-digested cod-liver oil.

## AN IMPORTANT STEP.

### What is Proposed in the Line of a Texas Exhibit.

World's Fair Headquarters, Austin, Texas, Nov. 5.—A most important step has been taken within the past week, and one of the greatest moment to Texas. Mrs. Tobin had been conferring with the County Exhibitors association, and the result of the conference was that she went to Chicago and obtained a valuable concession from the directory, the permission for the county exhibitors to build an annex to the Texas Building, to place their exhibits there and maintain them, and to distribute printed matter descriptive of the resources of Texas.

On her return from Chicago Mrs. Tobin stopped over in Dallas and completed complete her arrangements with the county exhibitors. There is now a complete understanding, and Captain Sydney Smith, Mr. Wynne ..... of the Arkansas Pass and Mr. Roesler of the Texas and Pacific are appointed an executive committee to arrange all details. The exhibits already prepared are very fine, and an effort will be made to induce every county in the state to prepare an exhibit and join the association.

Mr. Carl F. Brake, secretary of the Lumbermen's association, has turned over to Mrs. Tobin the notes and subscriptions of the Lumbermen's association to the Texas world's fair fund. These subscriptions amount in all to $3001.10, and are still to be collected.

Since the last report was made to the press, the ladies of Granbury, through Mrs. E. A. Hannaford, have sent in $100. The ladies of San Antonio, through Mrs. Helen Quinlin, sent in $100, and through Mrs. Laura E. Foote $100. The T. P. A., through Vern W. Jones, $45.25. Mrs. Ledbetter, of La Grange, sent $2 the remainder of the collection made in that city.

Miss Kate Rogely, of Matagorda, sent $3.55, the amount of the Columbus day collection in the Matagorda schools.

The State university gave $10, as its contribution to the statue fund. Miss Arta Numbers' bright little kindergartners sent $2.50 for Columbus day. Miss Hallie Halbert sent $6.70 from the public schools of Corsicana. Prof. James E. Rinkler sent in $14.90 from the schools of Columbus. Mrs. E. G. Owens of Nacogdoches sent $1, a personal contribution. Mrs. Henry G. King, of Caldwell, sent $15.50, as a first installment from the ladies of Caldwell. Mrs. E. W. Merrington, of Floresville, sent $24.05, and wrote "We were compelled to labor under difficulties, nevertheless we will continue to do our best."

Miss Mary Croft sent from the schools of San Diego $2.90, the contribution of the San Diego children. An unusual interest attaches to this contribution, in that it comes from the section that has so long been devastated by drouth, and the poverty is so great that many of the children have not even copy-books. Miss Croft adds that most of the children who contributed this money are Mexicans. This little sum, raised amid such circumstances and given so freely for the glory of Texas, should serve as a sharp rebuke to those more prosperous portions of the state which have done so little.

St. Mary's academy of Austin, sent in $16 as a Columbus day collection. Mrs. Juliette Rosch sent in the collection for the Houston statue from the Huntsville public schools.

Mrs. L. J. Story, of Lockhart, sent $50 from the ladies of that town.

I sent $35.25, collected in the public schools, Miss Lillie Shaver, of Greenville, on the 21. Jos. C. Watkins, superintendent of the Paris schools, sent $12.50, collected on Columbus day.

Julia Truitt Bishop, secretary.

### TERSE VERSE ON LOUISE.

Texas has a great big Hog,
His fleece don't look like wool,
And everywhere she throws a crumb
This Hog is sure to root.
This Hog is fond of rolling stuff
And eats it with much ease
That every time he takes a pinch
His freckles all will sneeze.

He took a pinch not long ago
In a Southern Texas town,
Its effects were felt in Wilmsboro
In the town of T. J. Brown
This Hog got the state house way
In spite of Democratic rule,
It made the people laugh and shout
To see a thing so cute.
He has stood up the state house park
And still he lingers near,
Quite scared to death at Warwick Clark,
Who has him by the ear.
The gate's ajar thro' which to jog,
For him we have no use
Warwick Clark will kill this Hog
And "save poor Texas loose."

### A Reliable Man.

M. J. Griner, justice of the peace at Print, Michigan, says one bottle of Chamberlain's Colic, Cholera and Diarrhœa Remedy saved his life. He had been down with bloody flux for three weeks when he commenced using this medicine. It soon cured him and he believes saved his life. He also says it saved the life of three railroad men in that vicinity. Squire Griner is a reliable and conscientious man, and whatever he says can be depended upon. For sale by N. E. Grammer and J. P. Nicks & Co., druggists.

Recent experiment has proved that if a delicate piece of lace be placed between an iron plate and a disk of gunpowder and the latter be detonated, the lace will be clearly stamped on the iron.

The Annex for lace laundrying is fast making its way to the hearts and purses of the Fort Worth and Texas people. Some of our best citizens will cheerfully testify to the superior merits of this new enterprise. Its connection with the Mending Bureau is a sufficient guarantee of its worth.

The honor of the invention of printing has been claimed by Mentz, Strasburg, Haarlem, Venice, Rome, Florence, Basle and Augsburg. The first three only are entitled to consideration.

Try a regular dinner at Lang's restaurant to-day. We guarantee satisfaction. Game of all kinds. Fresh oysters and all delicacies constantly on hand. Special attention paid to theater parties.

A ten-pound cannon ball was recently dug up at Lakeside, Ind. It has been identified as a relic of the times when Mad Anthony Wayne was in command thereabouts.

Prof. Hirschfeld, 511 Houston street, extends a cordial invitation to everybody to examine his fine new stock of pianos. No matter if you buy or not. By doing so, you can save from $50 to a bill $150.

The wealth of the Russian state church is almost incalculable. It could pay the national debt, some three billion and more dollars, and still be enormously wealthy.

None but ten years' old Belle of Nelson whiskey served over the Mansion bar.

The nearest approach yet to perpetual motion is the discovery of a European clockmaker who has invented a clock that will run for ten years without winding.

Has moved into the brick block on Houston street two doors north of H. W. Williams wholesale Drug Co., Fort Worth, Texas.

The condor soars higher than any other bird, spending nine-tenths of its time floating in the rarified atmosphere at a distance of three miles above sea level.

## NO MORE GIRLS AT CENTRAL.

### The New Automatic Switch System is Successfully Operated.

Laporte, Ind., Nov. 4.—The new telephone exchange just completed in this city and known as the Stroager automatic telephone system, is now in successful operation. The system differs from the old in that it does away with the "hello girl," the switching being operated and performed automatically. Laporte has the honor of being the first city in which the system has been introduced.

Readers and friends of THE GAZETTE will favor this paper by patronizing those who advertise in it. Do not fail, therefore, to give advertisers in this paper preference when placing your orders.

Old shoe throwing is done for many purposes. In Ireland the election of a person to almost any office is concluded by throwing an old shoe over his head.

Is your blood poor? Take Beecham's Pills.

For several months a pair of gray squirrels have been making daily visits to the house of a farmer in Lower Creek, N. J. They would pick up crumbs about the yard, and after a few visits they were not the last concerted by the family and seemed as tame as if they had always been household pets. A few days ago they appeared at the house with two of their young, which at first were rather shy but now are as tame as the old ones.

Best equipped shops in the city. Manufacturing and fine repairing a specialty. J. E. Mitchell, jeweler.

The first high hat ever worn was carried upon the head of a nobleman whose portrait appears among Albert Durer's marginal illustrations of the celebrated prayer book of the Emperor Maximilian. In Jost Ammann's "Book of Esquires," published in 1580, a high hat forms the crest of a nobleman.
