FIGHT FANS MIGHT ORGANIZE FOR SELF PROTECTION ALSO

PROMOTERS HAVE THEIR ASSOCIATION AND SO HAVE BATTLERS RECENTLY BANDED

Dopester Menke Relates "the Funniest Baseball Story," one of a Piney Owner and Other Sport Items

(By Frank G. Menke.)

NEW YORK, September 1.—How about the fight fans organizing for the purpose of protection?

The promoters recently organized primarily for the purpose of protecting themselves from the rapacity of the money-mad battlers. And now the battlers are speculating to find the promoters organization.

The idea itself is not any odd form in combination isn't will bring about some happy results to sport lovers.

Where the Money.

Can You Beat This One?

The Boston Herald's sport staff, how good they are indicated by contents of the Hub of the baseball world's team.

"It happened in 1906, pennant time. It was playing with the Giants on their home against the Brooklyn. Long ago. Mathewson had the ball in hand. The Giants had a lead. The game was nearly over. Mathewson was in the pitcher's box. Another ball was put into play in the usual way and the batter hit it a long drive toward the outfield and up to bat in left.

"I mean the ball go high in the heavens and kept it up. It went wild and he was unknown. In the meantime the third baseman had recovered from his fright and had thrown home. In the interval the first baseman received and after starting toward home the runner had been first and second. The umpires ordered the other runners back after the runner was well toward home and he was called out. Mathewson, the pitcher, who was trying to get to third, Meyerle, the catcher, hurried toward the home plate in an effort to confound the base runners who had broken up some made and another who was coming. The upshot was that no runs came out.

A $1,000.00 Dinner.

A great named pacer is about being a home named The Dinner is one of the selling horses at the Spencer, N. Y., meeting. Although owned the horse is home and from a "name one" entered in the run from The Dinner wasn't of much account.

Mathews paid $1,000 for the horse, a large sum for a "name" horse. Little did he know that the horse would cost The Dinner cost of much account.

The very next day The Dinner was entered in a race and won it with ease. The purse amounted to $1,000. There was a bid for $1,000 was another one, with $1,000 point attached. And about that the owner of the horse has turned down a offer of $5,000 for his animal.

In other words a horse Mathews paid $1,000 for in purses and $1,000 in purses has turned from value to $10,000 in the same time.

Darcy Was a Blacksmith

Joe Darcy, the Auburn Hub, who lasted a short month were the top of 1906, Mathewson is now 19 years old. He used to be a blacksmith. He was the farm about a year and then decided he was cut out for a horse in the racing game.

Darcy's first job was shoeing horses three last August. He was in a position to his boss horse and he replace another could not do well and so the position came open and Darcy was in the position mentioned and kept at it all time.

A COUGH REMEDY THAT RELIEVES.

It's pleasant to take the healing Pine Balsam, Tar and Honey, and mixed in a pleasant, soothing Cough Remedy called Dr. Bell's Pine-Tar-Honey. Thousands have benefited by its use—no need of your enduring that annoying Cough or risking a dangerous Cold. See Dr. Bell's on your druggist's shelf today. Get a 25c bottle today. Insist on Dr. Bell's Pine-Tar-Honey, start using it once and get rid of your Cough and Cold.—Advertisement.

HOW TO ENRICH YOUR FLOWER GARDENS WITH TULIP AND THE LIKE

UNITED STATES DEPARTMENT OF AGRICULTURE GIVES SOME DIRECTIONS FOR CULTIVATION

WASHINGTON, D. C., Sept. 1.—If you would have rich beds of tulips or give the nods or the corners of your lawns a beautiful spring-like yellow or white show of narcissus, daffodil and scilla, you must begin to think of the early spring appearance of your garden in the fall, for the bulbs of these two flowers must be planted in the fall before the ground is frozen. In fact, this work should be undertaken as soon as or before a nearly frost has begun to make the annual flowers in the beds look weakened. In dealing with narcissus, which is the family to which the daffodil and jonquil belong it might be well to think of trying to naturalize the narcissus to grow and blossom on the lawn much as do the wild flowers. How to plant and handle the bulbs as well as the best methods of getting them to become spring residents of grassy corners, are described in the following article of directions issued by the bulb specialist of the United States Department of Agriculture:

"These bulbs should be planted in light, rich soil that has been dug to a depth of at least 10 inches. The tulip bulbs should be set 5 inches apart and 4 inches deep and the narcissus bulbs about 10 inches apart and 5 inches deep.

"If they are to be grown in pots or window boxes, light, rich soil should be used. Place 1 to 2 inches of stones or broken pots in the bottoms of the pots or boxes to insure good drainage. After planting, place the pots or boxes out of doors and cover them with about 4 inches of ashes or sand; or they may be placed in a dark, cool room or cellar for a few weeks until the bulbs have formed a quantity of roots. They may then be brought into the light and hurried for flowering. Keep the soil well moistened from time of planting but avoid overmoistening, for if kept too wet the bulbs will decay.

Cultivation

"If planted in beds, the surface of the soil should be loosened after each rain and the beds kept free from weeds. In the late fall or early winter months it is well to cover the beds with a light mulch of straw or leaves to prevent injury to the young roots from the alternate freezing and thawing of the soil. This mulch should be gradually removed in spring, as soon as growth appears above ground. The bulbs are quite hardy and are not injured by severe cold if the soil is well drained.

Lifting and Dividing.

"Tulips and narcissus plants are perennial, and if given proper care and grown under suitable soil and climatic conditions will increase and multiply from year to year. The bulbs may remain in the ground two or three years, or until the clumps begin to crowd. After blossoming in the spring, from six to eight weeks should elapse to allow the foliage to die partially down, when the bulbs may be lifted with a spade or fork. Shake the soil from the roots and store the bulbs in a cool shady place where they will ripen and cure. When the old leaves and roots are thoroughly dry they may be easily rubbed off and the cluster of bulbs divided. The bulbs may then be planted in the same manner as the original bulbs. In this way the stock may be increased in a few years.

Naturalizing the Narcissus.

"The narcissus often becomes naturalized when planted in the sod or partial shade, where it will continue to grow, blossom and multiply for many years without further attention. Simply make a small hole in the soil 5 or 6 inches deep, insert the bulb pointed end up, press the soil over the top, and nature will do the rest. For naturalizing avoid planting in rows or rigid geometrical figures. A good plan is to scatter the bulbs like seed and plant where they fall. This method of planting is extensively followed in the home grounds and parks of England and other countries of Europe. In portions of North Carolina, on large estates along the James river in Virginia, and in old gardens in New England, narcissus that were planted over half a century ago are still growing vigorously and every spring produce beautiful clusters of blossoms.

FIGHT FOR DARDANELLES CONTROL MOST DRAMATIC PHASE OF THE WAR

HARRY GRISWOLD DWIGHT SAYS NO SOLUTION WILL EVER BE FOUND BY WHICH ONE NATION WILL BE ABLE TO CONTROL THE BOSPHORUS AND THE DARDANELLES

WASHINGTON, Sept. 1.—With the narrow-lanes battle-theatre of the Turks proclaimed by the war-prophets as that where the deciding master strokes in this most titanic-line of all struggles are to be delivered, a sketch of this remarkable region's past prepared by Harry Griswold Dwight for the National Geographic Society is of more than usual interest. Here the West won its self-confidence, and this confidence has borne fruits with splendid richness for longer than 1,000 years. Here the course of civilization has been changed and modified several times, and here, again today, the attention of the world is fixed in the belief that the future of Europe will once more be determined by events about to transpire. To the bulletin just issued by the National Geographic Society, Mr. Dwight tells about "The Gates to the Black Sea."

"There is something alluring in the shape and position of these inlets—the Black Sea and the Sea of Marmora—separating as they do the two most fascinate continents of our globe, and nonconnecting with each other and with the outer seas by openings that seem miraculous. And these landlocked waters have been from earliest times, as they happen again to be today, the theatre of epic events. For us of the West its legends are older than those of Troy and Ilion, of Thyrsus and Helle, of the Trojan war, of Jason and the Argo, which commemorate the earliest voyages into the Great Lakes of the Levant.

"Of the two, the Marmora—the Propontis, if you prefer to be classical—is far the smaller. Not much more than 165 miles long and some forty miles across at its broadest part, it is about the same size as Lake Champlain. The Marmora has much of the softness of our vividness of color, and beauty of scenery that we associate with the Hudson and Indian lakes. Through the narrow slit of the Bosphorus, however, and you pass into an entirely different world—sterner, larger, rougher, colder.

"If the Marmora may be compared to Lake Champlain, the Black Sea is about four times the size of our greatest lake. Lake Superior is 412 miles long by 161 wide, while the Black Sea has a length of 750 miles by a breadth of 295. Yet there is something stark and austerely alone in it, quite unlike any other lake of the world. It would long ago have become a place of pilgrim for pastoralists and romancers, as happens to it transiently on land and wind, is simply crowded with bays, capes, islands, promontories, forests and all other accidents of shore that make glad the hearts of the amateur explorers. As it is, the Marmora remains strangely wild for a sea that has known so much life. More numerous than the settlements of today are the cities of yesterday. About no body of water in the world, of equal size have there been so many stately cities. It is almost impossible indeed to give any coherent account of the story of Marmora, so much history and legend have crowded its shores.

"The true question of the straits arose as early as the fifth century B. C., when Alcibiades of Athens reminded the people of Chrysopolis, the modern Scutari, of the northeastern extremity of the Bosphorus, to take all toll of passing ships," but the Ottoman regulation of the straits has been far more jealous than anything attempted by the ancients. "The Turks have allowed no foreign men-of-war to enter the Marmora," the writer continues, "unless under rare and special circumstances; and not only do they exercise surveillance over the traffic in the straits, but twice during the last four years they have closed the Dardanelles to merchantmen of any flag."
