DRILLING REPORTS—MONTANA and ALBERTA

GET ACQUAINTED WITH THIS PAGE OF INFORMATION

Time and space do not allow weekly summary of activities of every structure in the news columns, but the information is always contained in this column.

Information regarding well depths is secured, as a rule, from the operators themselves.

The structures here listed are considered "active" where drilling is in progress or plans have been made to make further tests.

Readers are invited to point out to us any errors in location or depths.

Operators are urged to send in correct information regarding depths of drilling wells. This column is made up every Thursday night. Telephone or telegrams must be received at this office before 10 p. m. Thursday.

Owners of Platt maps or Government Contour maps can correct them up to date by noting the wells under Kevin-Sunburst heading "Add These New Locations" and "Add These New Producers."

HOW TO LOCATE THE OIL FIELDS
(Maps referred to in the text below are now out of print)

Subscribers of the Montana Oil & Mining Journal have been supplied with a keyed map of the State of Montana, showing recognized oil and gas structures. Here's how to use the map:

The key numbers appear with the name of the field in the column herewith.

Note that across the top and bottom of the map are the letters of the alphabet from "A" to "Q". Vertically, along the sides of the map, are the numbers "1" to "12".

The key numbers appearing with the name of each field in the columns below readily show the location of the field.

As an example: to find Kevin-Sunburst field. The Key Number is "F-2." Touch "F" at the top of the map with the forefinger of the right hand and touch "2" on the left hand side of the map with the forefinger of the left hand. Draw the finger of the right hand downward until it is straight across from the finger at "2." The point where the finger stops is on Kevin-Sunburst field.

This method makes it possible to quickly find the proximity of the structure. By reference to the township and range numbers it is possible to find the exact location of the test. Where domes do not appear at given locations, we are not sufficiently familiar with structure, if any, to indicate the existence of a fold.

ALBERTA OPERATIONS

ALDERSYDE

Ranchmen's ... 16 15-20-29-4W Drilling 5365

BEAVER DOME

Madison No. 1 ... 10-24-2-11W4 Shut down 1900
