LEGAL NOTICES
In Bankruptcy, No. 775.
In the Matter of
William Albert Jenness
Bankrupt.
To the Hon. James D. Elliott, Judge of the
District Court of the United States for the
Southern Division District of South Dakota
William Albert Jenness of Harrisburg in the
County of Lincoln and State of South Dakota
in said District, respectfully represents:
That on the 29th day of January, last past,
he was duly adjudged bankrupt under the Acts
of Congress relating to Bankruptcy; that he
has duly surrendered all his property and
rights of property, and has fully complied with
all the requirements of said Acts and of the
orders of the Court touching his bankruptcy;
WHEREFORE, HE PRAYS that he may be
discharged from all debts provable against his estate
under said Bankrupt Act, except such debts as
are excepted by law from such discharge.
Dated this 28th day of March, A. D. 1913.
WILLIAM ALBERT JENNESS,
Bankrupt.

Order of Notice Thereon.
United States of America vs.
District of South Dakota
On this 28th day of March, A. D. 1913, on reading
the foregoing petition, it is
ORDERED BY THE COURT, that a hearing
be had upon the same on the 28th day of May
A. D. 1913, before said Court, at Sioux Falls in
said District, at ten o'clock in the forenoon;
and that notice thereof be published twice
in Farmers' Leader, a newspaper published at
Canton, a newspaper printed in said District,
and that all known creditors and other persons
in interest may appear, at the said time and
place and show cause, if any they have, why
the prayer of the said petitioner should not be
granted.
And it is further ordered by the Court, that
the Clerk shall upon payment by the bankrupt
or his attorney of the actual expense thereof,
send by mail to all known creditors copies of
said Order and this Order, addressed to them
at their places of residence as stated.
WITNESS, the Honorable James D. Elliott,
Judge of the said Court, and the seal thereof,
at Sioux Falls in said District, on the 28th day
of March, A. D. 1913.
OLIVER FENDOR,
Clerk.

acre well improved farm for rent and
one 550 acre well improved farm.

Notice of Sale of Real Estate.
State of South Dakota vs.
County of Lincoln
In the matter of the Estate and Guardianship
of: Ruth M. Holmgren, Hjalmer F.
Holmgren and Helen Holmgren, Minors.
By virtue of Order and Decree of the
County Court of Lincoln County, South Dakota,
made on the petition of the undersigned
Christine E. Holmgren, Guardian for the
minors above named, for an order to sell the
real estate of said minors at the March term
A. D. 1913 of said Court, to-wit: on the 10th
day of March, A. D. 1913, the said Guardian
will on and after the 1st day of April, A. D.
1913, sell at private sale to the highest bidder,
one third cash and the remaining two-thirds
on two years time the real estate hereinafter
described: all offers or bids for said real
estate to be made and file before the said 1st
day of April, A. D. 1913 with the said Guardian
at her home in the City of Canton or with
J. V. Conklin, at his office in the First
National Bank in the City of Canton, to-wit:
Lots one (1) and four (4) of Block four (4) of
Highland's addition to the City of Canton,
according to the record plat thereof. The
purchaser to give security by a mortgage on
the premises sold to secure payment of the
balance of the purchase price for said lots.
Dated this 10th day of March, A. D. 1913.
CHRISTINE E. HOLMGREN,
Guardian for the minors above named.

STICK TO STANDARD VARIETIES
In selecting seed for planting it is usually best to stick to standard or thoroughly tested varieties, says Hanley Champlin, asst. Agronomist at the State College. Experimenting on a large acreage is too risky. Supposing one were to buy a variety of oats not adapted to his climatic conditions and plant forty acres of it. He would thus very certainly lose four hundred dollars or more.
The Experiment Station finds that in nearly every case the varieties that give best results are those that come from regions where climatic conditions are similar. Records have been established for a long list of varieties and the records of the best ones have been published. The ones that have the best records are the ones to use. Bulletins 110, 113, 124, 133, 135 give these records and can be had for the asking.
If seed of these varieties is not obtained, and other seed must be bought, try to get seed grown as near home as possible. Other things equal the chances are with the home grown seed. The point is don't buy seed just because it has a fancy name. Look up its record. An effort is being made to bring the best varieties into more common use, but it is a big job and the means for accomplishing it are inadequate but that is not saying that it can't be done.

High School and Agriculture
We commend to the attention of our readers and to the members of the various state legislatures which are now in session, the article which will be found in another part of this issue, on high school extension. It is by Professor Whitney, of the city high school of Grafton, North Dakota, and tells the story of what that particular high school is doing in agricultural work. In many of the western states, laws are being enacted to compel the teaching of agriculture in the rural schools of the state. Those who have given the most attention to the subject do not look with favor on these bills compelling the teaching of agriculture, but sentiment among the legislators is strong for them, and they will no doubt become laws in many states. Hence the necessity of agricultural work in high schools which will prepare teachers for the country schools who are competent to teach agricultural subjects.
—Wallace's Farmer.

CORN AS A FIELD CROP.
With us it is no longer a question "Can we grow corn?" but how much shall we put out this season. Has it been a profitable crop? Can it be made more profitable? are the questions that should decide largely what the acreage of corn or any other crop should be in a given season. Where livestock are kept on the farm, this crop can be utilized to the best advantage. We need it to finish out the cattle and hogs for market. What we need more is a cultivated crop, like corn, in our system of farming or crop rotation. Land tires of wheat, wheat, wheat.

Hatching Chickens By Wholesale.
There is now in operation at Port O'Connor, Texas, a machine that is capable of turning out a chicken every twelve seconds for twenty-four hours a day, and for three hundred and sixty-five days in a year, says a writer in Technical World for April. This mammoth hatcher is the third of its type built by the inventor, who was formerly a poultry expert for the Government. It is the second largest hatching establishment in the world, being slightly exceeded in capacity by a hatchery at Petaluma, California, which holds 165,000 eggs as against 150,000 in the Texas machine.
Perhaps the most remarkable feature of this plant is the fact that all the eggs, together with room for candling, chick packing, and all engines, fans and equipment, occupy but a single floor 16 by 50 feet. Furnished with common incubators, such a room would have just about the same capacity in three weeks as this plant has in a single day.
This wonderful economy of space and cost is attained by placing the eggs in superimposed trays like the type cases in a printer's case rack, or the trays in a fruit dryer. This idea has been tried before, but was not a success on account of the hot air rising. In the present instance, this difficulty is overcome by forcing a continual current of air from a centrifugal fan through the hatching chamber, which serves to keep it at an even temperature throughout. While this is quite an item of expense and would not pay with a small machine, yet in a big plant it is paid for several times over by the saving of the duplication of the small machines, as well as by the economy of the fuel and labor.
One of the unique improvements in the Texas plant is a turning system, by which compartments holding 10,000 eggs are swung on a pivot and the eggs turned by inverting the entire compartment. This enables one man to turn 100,000 eggs in less than two minutes. These eggs are ventilated and maintained at an equal temperature by an eight hundred pound centrifugal fan, requiring four horsepower to operate it, and the temperature is regulated to a tenth of one degree, while water sprays regulate the moisture to a similar nicety.
The eggs are not cooled from the time they enter the hatchery until they leave.

WHAT VARIETY?
The variety that will mature the greatest number of bushels per acre is the desirable one, with particular emphasis on the maturity. Stock does much better on well matured corn. This expression "off feed" originated with feeders of soft corn. The markets demand solid corn and let's see to it that it is produced. Minnesota No 13 and Early Nudrock are varieties of yellow corn that have stood the test of trial in different localities of Spink County, Wisconsin No. 7, Burdette White, and Spink County White dent are varieties of white corn that have proven to be early maturers and good yielders. These can be improved for your locality by careful breeding and selection. Almost as much stress should be placed on locality where seed is grown as variety name. If your neighbor has good seed corn of a tried variety, seek no further. Go North rather than South for your seed corn.

SEED CORN.
Use only well matured corn that will grow as proven by germination test for seed. The individual ear

G. M. Lee, Manager

In nearly every home there are one or several things that are still in good condition but never used. Most likely it is dumbly reposing in some odd corner of the room, or in the basement or the attic. It may be an old rocker, a table, a stove or what-not. Why not bring it out, brush off the dust, fix it up a little and advertise it in the LEADER Want Ad column? The prospective buyer is sure to read your ad if you advertise regularly and persistently. Our rates are very reasonable—5 cents a line for each issue, six words to a line. Use your phone and call us up—our number is 77

World's Only Successful Double Lever Disc Harrow
Most practical! Most durable! The only Double Lever Disc Harrow where the gangs can be set at different angles and still have the bumpers always bump.
Look into this remarkable tool at once. It puts the ground in better condition—does it easier, quicker. It increases your crop, cuts your expense. Mechanically perfect; so simple and so durable that it will stand years of use and abuse. Save trouble, expense and do perfect work. Use the
Bonanza Jr. Rock Island Double Lever Disc Harrow
Here is the great feature of this harrow: Instead of being angled from the center, the Bonanza Jr. gangs are angled from the ends. Instead of the side thrust falling on the boxings and bearings, it is delivered directly to the bumpers. No matter at what angle the gangs are set by the two levers, these bumpers always bump. They can't help it. Because the inner ends of the gangs are always together. They roll against each other at one rounded point. End thrust, so fatal to bearings and so hard on horses, is entirely neutralized by these bumpers. The only disc harrow built with this most important feature.
Least Friction—Longest Wear
No bumping up in middle. No scraping of one gang-disc against the other gang-bumper—no cutting out of bearings—no animal-tiring neck weight! Just an easy draft, smooth running harrow that cuts deep and prepares the ground for a maximum harvest of dollars at smallest expense.
Bonanza Jr. made in sizes cutting from 4 to 8 feet. Size of discs 16, 18 and 20 inches.
Don't lose money by waiting. Come in and look this harrow over. Come in today.
