ELECTRIC LIGHTS ACCOMPLISHED IN PAST TWO WEEKS WITH ENTIRE DEPENDENCE ON UNCAS POWER STATION.

The changes at the electric light plant have been made so that if actually required the steam plant could be started, but in a day or two everything will be in readiness for starting it whenever it is needed. For the past two weeks the fire have been running the boiler and the steam piping down because of improvements at the plant, so that entire dependence was placed upon the Uncas power station for the electric current. There is a large volume of water there and electrical storms have not interfered, so that no trouble has been experienced with the operating of the electric lights and the furnishing of electricity for power about the city during the past two weeks.

The new smoke flow, of brick from the boiler to the stack, has been completed. This is a large room which permits getting at the pipes easily, has been tested out and found to be all right, so that with the completion of a few other small changes the present equipment of the steam plant will be in readiness for use.
