SILK WEAVERS REFUSED

Ask 15 Per Cent. Wage Increase, Which Windham Company Will Not Grant—Bad Time for Such Request.

Wednesday morning a committee from the weavers' union went to the officials of the Windham Silk company to receive the company's answer to their request for a 15 per cent. increase in wages.

Mr. Cunningham, who is acting as John Golden's representative in the city at present, telephoned to Mr. Golden, who was called to Boston Wednesday morning to attend a conference. The latter is to come to Willimantic and meet with the silk weavers and outline a plan of action.

The weavers seeking the increase belong to a local union that is affiliated with the Textile Workers of America, of which John Golden is the executive head.

The claim is made that the demand for the increase is unusually dull at present. The local weavers have been given practically steady employment, when many others of their craft in other places have had to work on short time.

The officials are not giving out any statements for publication, but it is claimed that the officials of the company did not refuse to grant the demand for a 15 per cent. increase without becoming thoroughly convinced of conditions in other places throughout the state and country.

Investigation resulted in finding that the Windham Silk company was at present paying its weavers at a higher wage rate than any similar company in Connecticut and that the wages paid the weavers by the company are higher in an average instance than practically any mill in the country, when the lack of lost time is considered.

The officials of the company would not be adverse to closing down the plant for a period of six weeks or two months and long resisted all attempts of the silk business just at present, and therefore it is hard to see how the weavers are to be benefited by urging a strike to obtain their demands.

Helps A Judge in Bad Fix. Justice Eli Cherry, of Gillis Mills, Tenn., was plainly worried. A bad sore on his leg had baffled several doctors and long resisted all attempts of the medical profession.

Mrs. Ben Meyerkin, Clymer, N. Y., read of Foley's Honey and Tar Compound just at the right time. She says: "I received Foley's Allmane from our druggery and read of Foley's Honey and Tar Compound. I got a bottle at once and gave some to my little girl. It saved her from the cough which she would have surely had but for Foley's Honey and Tar Compound."

DAVID A. WELLS. the famous free trader, once told a friend, "If I had left my money in the Savings Bank I would be worth a great deal more."

Evidently he made some investments that did not turn out profitably. Thousands upon thousands have had the same experience. Mr. Wells probably had an acquaintance with as many men of affairs in his day as any citizen of the country, so if he would have been "worth a great deal more," isn't it a good plan for you to leave your money in the savings bank.

This bank solicits deposits and guarantees the depositors a safe, sane and conservative management, according to the law.

Savings banks can only invest in such securities as stipulated by law.

RUTHLESS DESTRUCTION OF GAME BIRDS FOR FOOD

Shown in Report Presented to Congress by Senator McLean. (Special to The Bulletin.) Washington, May 1.—Senator McLean has presented in the senate the favorable report of his committee on the bill introduced by him for the protection of game birds. The report shows that under the supervision of the United States biological survey the crops of 5,500 birds were examined in 1909, and 250 caterpillars were found in the crops of cuckoos. In the crop of a night hawk were found 60 grasshoppers and in another 300 mosquitoes. 25 cut worms were found in the crop of a blackbird; 70 canker worms were found in the crop of a robin. Professor Schude estimates the diet of a song sparrow at 1,500 larvae per day. It is estimated that a single yellow throated warbler will consume 18-

000 aphids or tree lice in a day. Scarcely a day has passed since the warblers have been seen to eat 25 grasshoppers a minute for 15 minutes at a time.

Senator McLean said in closing his report that "in a single county in Nebraska in one autumn not less than 30,000 birds must have been destroyed. Supposing that each of these birds ate 150 insects daily, we then have 4,500,000 insects per acre. In enormous number of 128,000,000 insects were in this one county in one month, that ought to have been destroyed. The annihilation of birds, the killing of such birds is not a local, it is a national, a continental loss."

Collier's Weekly, in its issue of September 2, 1911, published an article entitled "Here Are Foods That Are Pure," by Margaret Wagner. There was printed in this article "A List From Which Housewives May Choose Without Doubt or Hesitancy." This list was the result of several years analytical work by the pupils of the State Normal School at Westfield, Massachusetts, under the direction of Professor Lewis B. Allen. KING'S PUREMALT is mentioned among the food products of absolute pure quality. The endorsement of this preparation and the publication of the article by Collier's Weekly was unqualified by the manufacturers.

been enormous and ruthless during the past forty years. It quotes the report of the commissioner of agriculture in New York for 1904 to show that "one dealer in New York was known to have received 20 tons of prairie chickens in one consignment, and some of the larger poultry dealers are estimated to have sold from 150,000 to 200,000 game birds in six months."

In estimating the value of insecticides, the report states that as long ago as 1904 Dr. C. J. Bartlett asserted that the loss to the agricultural industries in that year, caused by insects alone, could be conservatively placed at \$75,000,000, and this estimate does not include a dollar for insecticides. It is estimated that during the last year insect pests destroyed agricultural products to the value of \$300,000,000.
