AND THIRD. Dealer in all kinds of  
Wholesale and Retail Dealers in Havana Cigars, Cheering  
and Smoking Tobacco, Gill Edge Fine Cut Cheering  
Tobacco. 16-414

INTERSTATE COMMERCE.

A STRONG ARGUMENT AGAINST THE REAGAN BILL.

An Experiment That Has Been Tried and Failed—Its Injurious Effect Upon the Railroads—Some New Ideas.

The following interesting extracts are taken from an argument delivered by Hon. James F. Wilson, on the Reagan Interstate Commerce bill, before the Committee on Commerce of the House of Representatives, January 20, 1880:

Mr. Chairman: I will now proceed to submit a few observations relative to the fourth section of the bill. This section is a knifing in the dark, is sharp and long. It cuts clear through the railroad, especially those remote from the great market centers. It is harmful both to the railroad companies and the public. It is an unprincipled, unphilosophical, opposed to the best interests of the country and strikes the West a fearful discriminating blow. It is destructive to some principles of public policy. It is an abstract proposition, it has a certain attractiveness about it well calculated to mislead many minds. It was once popular in the State in this section. They put it into a law. The railroad companies put it into practice. The great portion of the State. It needed to be tried to cause a general demand for its repeal. It was repealed, and the Commission on Commerce in fact in its stead. There is a reason for this. One fact is of great practical value.

A THOUSAND OPPOSING THEORIES.

The lesson taught by this fact is that you cannot bring a good result out of a bad principle by legislative enactment. First, the Commission on Commerce in fact in its stead. It is another well laid fact that the legislative intention may be a bad principle, but it will produce a good result. It can prevent it. Another well laid fact that the legislative intention may be a bad principle, but it will produce a good result. It can prevent it. Another well laid fact that the legislative intention may be a bad principle, but it will produce a good result. It can prevent it.

THE PRINCIPLE OF THE LOW RATE FOR THE LONG HAUL.

It is the true one. It is the only one through which the railroad companies can longer preserve a good result. It is the only one through which the railroad companies can longer preserve a good result. It is the only one through which the railroad companies can longer preserve a good result. It is the only one through which the railroad companies can longer preserve a good result.

ANOTHER IMPORTANT APPLICATION.

By the railroad companies of the principle of the low rate for a long haul, which must disappear under the operation of the Reagan bill. It is the only one through which the railroad companies can longer preserve a good result. It is the only one through which the railroad companies can longer preserve a good result. It is the only one through which the railroad companies can longer preserve a good result.

THE ANNALS OF MANKIND.

Will furnish no parallel. Population, wealth and power will walk hand in hand in a procession of the world. They are in no inconsiderable part maintained by taxation of property persons who have no children to be educated for the education of the children of others who have no property to be taxed. Some of the States yield a net revenue to the Government from the postal service. Others fall short of paying the cost of the service. How would the people of the non-paying States be deprived of the service on that account? And yet what a continuance of these conditions but the taxing of those who do pay for the service, and who do not? And so, I might go on and on with a hundred illustrations quite as pertinent as these.

THE REASONING.

Which supports the principle of Section 4 and justifies legislation in support of it, would apply a repressive remedy in the other case. The principle is assumed as an element in a commercial code. The West and other remote sections of the country cannot afford to have it applied to transportation. The principle is assumed as an element in a commercial code. The West and other remote sections of the country cannot afford to have it applied to transportation. The principle is assumed as an element in a commercial code. The West and other remote sections of the country cannot afford to have it applied to transportation.

IT FILLS THE PURSUES.

And forces and rolling mills with orders. It depends and extends the mines, and creates a market for the products of the manufacturing localities with dense populations, and thus secures to the Eastern agriculturist a home market and good prices for all of the products of the West. It is every way it benefits the East. Does it harm the country at large? Look at the balance of trade against Europe in our favor. What would it have been but for the enormous crops of wheat and corn which the long haul which carried them to market? This was that brought the cattle, sheep, hogs, wheat, flour, corn, and other products from the remote West, and made them abroad to feed the people of the Old World. This was that largely made up our balance of trade. And brought home your goods from the remote West, and made them abroad to feed the people of the Old World. This was that largely made up our balance of trade. And brought home your goods from the remote West, and made them abroad to feed the people of the Old World.

A MONSTROUS WRONG.

In railroad management. Let me illustrate this. Suppose the greater distance over which a car load of freight is to be carried by 1,000 miles, that it takes 100 miles, and the car load of the same kind of freight is to be moved over the line a shorter distance of 500 miles, can \$100 be charged for that shorter haul? The answer is, of course, no. The construction of the section given by its author. Whatever is charged for the greater distance may likewise be put upon the shorter haul. If \$150 be charged for 1,000 miles, the same rate should be charged for 25 miles. And this is to have the sanction of law. Should a law be enacted which would permit so great an increase of rates for a shorter haul, and these constructions must be given to the section: Either it prohibits a low rate for a long haul or it authorizes an exorbitant rate for a shorter haul. It is a monstrous wrong. It is a monstrous wrong. It is a monstrous wrong. It is a monstrous wrong.

THE RESULT.

If Section 4 should be given the force of law and receive the construction which I have, with others who have addressed the Commission, given it, it may be asked, "Will the railroad companies consent to it?" They would not. They would not. They would not. They would not.

BEYOND THE PRIVATE ELEMENT.

Which the case must necessarily embrace and give attention to the public welfare. If this be not the character of our position, why is this question here at all? It is a question of public welfare. It is a question of public welfare. It is a question of public welfare. It is a question of public welfare.

THE REASON OF BIRDS.

May I tell a few facts to prove that birds can be like their human friends, but that is reasonable and unreasonable: 1. Several years ago a pair of my canaries built a nest in the corner of my room. They were intensely hot. She dropped, and I began to fear that she would not be strong enough to hatch the eggs. I watched the nest closely, and soon found that the bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care. The bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care. The bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care. The bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care. The bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care. The bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care. The bird was a devoted nurse. Helated in the fresh cold water I supplied every morning, then went to the edge of the nest, and the hen bird sat on it with her head buried in the nest. Without hands and without a sponge, what more could be done? The following spring the same bird was singing in my window with three other canaries. This was the result of the bird's care.
