Wheeler, an Irish land agent, has been shot dead near Oola, Limerick county.

During October 61,812 immigrants arrived in the United States.

The town of Koochie, Louisiana, was utterly demolished by a recent cyclone.

The Second Chamber of the States-General of the Netherlands, by a vote of 41 to 29, has refused to re-establish capital punishment.

Fighting continues along the Russian line in the Tarkoman Steppes. General Skobeleff proposes to declare a state of siege in the Trans-Caspian region.

It is said that the Shah of Persia has appealed to Russia for help against the Kurds. The Government has consented to give help under certain limitations.

Rumors of another Nihilist conspiracy, even more terrible and more carefully organized than any of the plots hitherto discovered, are afloat.

A fire damp explosion occurred in a coal pit near Mowbray, England, for the twenty-seventh time in the pit at the time, of whom 15 have been recovered more or less injured.

Small-pox is sweeping off by hundreds the Canadian Indians on the north shore of the St. Lawrence, and such is the panic that those not afflicted flee from the dead and dying.

Lord Clancarty has taken a house at Mowbray, Leicestershire, England, for the winter. The effect of his leaving Ireland will be to deprive labor of employment to the extent of \$20,000 a year.

The epidemic is spreading to an alarming extent among the homes in Montreal. The disease is more severe than on any previous occasion. The deaths, already numerous, are spreading most among heavy draught horses.

Gonzalez, President elect of Mexico, has arrived at the capital. It is rumored that he will leave matters as before the election, almost all the officials retaining their posts. The public debt of Mexico amounts to \$144,000,000.

Capt. Jas. B. Eads, accompanied by his wife and daughter and others has gone to Mexico. The mission is to make a survey of the Isthmus of Tehuantepec, to determine its adaptability for an interoceanic ship railroad.

The Land Leaguers at Cork are reported as saying that they have no intention of doing well to poison all game covers, and thus spread consternation among the land gentry thereabouts. The report in all probability originated with the landlords themselves, or with the correspondents of English papers.

News is received from the West Coast of Africa of the death of Chas. Governor of Wydhams. His funeral was to be celebrated by a massacre of natives, after which the King had announced his intention of holding an annual celebration in memory of his father. The celebration will last four months, during which 200 chiefs will be beheaded. The English have refused to go to the celebration.

The American cattle trade, notwithstanding that all arrivals must be slaughtered where landed, continues to progress. From New York, Boston and Baltimore, during the last three months, 16,769 head were landed, as against 10,205 for the same period last year. The severe weather lately recorded has caused the losses on passage to be heavier than last year—the numbers being 1,115 head, or 6.92 per cent., as against 253 head, or 2.48 per cent., in 1879.

The Congress of San Domingo has passed a decree, considering the proofs sufficient that the remains found in the cathedral on September 10th, 1877, are the remains of Christopher Columbus, a monument to enshrine them shall be erected at the capital. All the American Governments are solicited to contribute to the fund. The Government of Santo Domingo gives \$10,000.

A Petrified Squaw.

Alonso Zaleito, an Italian fisherman, recently discovered a petrified woman at Cascade Lake. He was going out to fish at the time, and, when pushing off his boat, struck his oar against something which attracted his attention. He investigated the matter and found a petrified hand protruding from the sand and pebbles on the beach. In a short time he had unearthed a woman in a complete state of petrification. The body was small, brown and scrawny and emaciated. The petrification had a hideous appearance, and the body originally must have belonged to a shrewd, healthy woman. The left breast was well developed, but the arms and legs were not much larger than the bones would have been, and the fingers of the right hand were gone. The petrification weighed nearly two hundred pounds, and a more unlighty object could not well be imagined. It was brought down to Lake Tahoe in the afternoon, and L. J. Wilson, of San Francisco, has offered \$100 for it, as he wished to present it to the Academy of Sciences. In all probability the body is that of an Indian woman. There is a tradition that years ago the Indians had a battle at Cascade Lake in which the squaws joined, and the dead were buried on the shore of the Lake. The finder wishes \$150 for his prize, and it is probable that the sum will be paid by the Academy, and the curiosity be sent to San Francisco.

Curious Custom.

An English gentleman, who has lately traveled in Palestine, recently gave a description of the curious scenes that are enacted in the church of the Holy Sepulchre. He said when you first entered the church you would be surprised to see a party of soldiers, with their swords by their sides, and their guns stacked within reach. It seemed a sacrifice in such a holy place, and struck one rather unpleasantly. But he soon found out the necessity for it; according to the laws of the country, every sect is allowed to worship there; and it is considered equally sacred both by Christians and Mohammedans, all wish a time for their mode of worship.

The law allows them an hour each. They commence at six in the morning. At that hour those who have the first privilege enter, bringing whatever is necessary to conduct their particular rights. They go through their prayers and chants, and all is very quiet till about a quarter to seven, when those who have the privilege of the next hour begin to arrive.

At first all is decorous, but presently the rowdiness begins to show itself, and as their number increases, and they become stronger, they push and crowd, and, as

the time lessens, they get more and more bold. A few minutes before seven they proceed to more forcible demonstration. They think if they can clear out these blasphemers a few minutes before the time, they have done so much good work, while the worshippers, on the other hand, think if they can keep possession a few minutes after the time, they have done an equally good work.

As some of these sects use torches, wax-candles, staves, or crooks, in their worship, they proceed to use them as weapons of offense or defense, and a free fight ensues. Then come in the soldiers, who separate the combatants by filing in between them, turning out those whose hour is up, and leaving the place in the possession of the last comers. If blood is shed, the church is closed for the day. Such scenes are occurring all day long, and the presence of soldiers is absolutely necessary.

The Journal of the Future.

The newspaper of the future—and the not distant future—will be independent of the politicians. The experience of newspapers which have been sincere in their expressions, which have refused to shield the corrupt and vicious in any party, has been altogether encouraging. Independent journalism does not mean indiscriminate abuse; but in this day it means either a neutral or a vigorous fighting of the evils in all political parties. And here is where the properly independent journal is sometimes misunderstood even by intelligent men. A calm and temperate argument, in which the effort to appear fair gives roguery almost a certificate of good character, cannot be effective in a warfare upon rogues; yet the newspaper that takes a rogue by the collar and lifts him up to the public gaze, really is, in some cases, called abusive, malicious, personal. Consider the condition of our politics in the hands of the men who are responsible for what is bad in the press; men with an inordinate greed for office, ready to sacrifice anything to secure office and then to use it in the interest of self and party; consider the false issues with which the people are deluded, the injuries that are inflicted upon the country by partisan legislation, the corrupt bargaining by which the best sentiment among the people is outraged—imagine where it will lead—and then say, whether calm and temperate discussion of principles will correct the evils. But there are men who will denounce a vigorous war upon political misleaders as abusive—just as they declare that a preacher who battles bravely against a gigantic error has none of the humility of religion about him.

The public is fairly ready to welcome a genuinely honest newspaper, though with not unanxious suspicion. Newspapers are no longer supported by the people simply because they are party organs, and the man of foresight can find in this the beginning of a sentiment that will eventually demand of the press sincerity. A newspaper that endeavors to be just will make errors—human judgment is not infallible, and the only safety from error lies in strict neutrality or impartiality—but it will also make a place for itself in the community to which a mere party organ may aspire in vain. As this truth becomes more generally recognized, and as the influence of the professional politician over the people wanes, the subservience of newspapers to party leaders will vanish, and that only will live that endeavors to be just in its treatment of all questions. —Milwaukee Sentinel.

The "Mee-Foo."

The new C. M. S. N. Co.'s steamer that will shortly run on the China line in conjunction with the Hoching, is named the Mee-Foo. She went on her trial trip on the 13th October. The *Starbuck Courier* gives the following description of her hull, and fittings generally: Her draught of water, was 10 feet 10 inches forward and 13 feet 2 inches aft—a very light draught considering the tonnage of the vessel. She has been fitted with compound double inverted cylinder engines of 150 nominal horse power, her length over all, 295 feet; length of main deck 271 feet; beam amidships 33 feet; depth of main deck 7 feet 3 inches; depth of lower 'tween deck 6 feet 6 inches; depth of lower 'tween deck 6 feet 6 inches; total depth 35 feet 3 inches. Her tonnage is 1,745 tons and 1,284 net. She carries 200 tons of coal in her bunkers, her estimate consumption being 12 tons a day. Altogether the vessel is constructed to carry 850 Chinese passengers, 350 of whom can be accommodated on the main deck whilst the lower 'tween deck can be used either for passengers or cargo, as occasion may require. Her only drawback, perhaps, is the weakness of her engines, as they hardly seem powerful enough for a ship of her size and build. She would have stood engines at least another 50 horse power with great advantage. If she is to go to San Francisco, a speed of, at any rate, ten knots an hour should have been secured. She made an average of 60 revolutions a minute, or from 8 1/2 to 9 knots with slack tide and head wind; and then it must be remembered that she did not have an eighth part of her cargo on board which she is intended to carry. She has eight boats, three being life boats fitted with air tanks and four being provided with patent tripping gear; and so simple is the apparatus for releasing them that six can be lowered in about three minutes. A house has been constructed 11 feet 4 long 13 feet 4 wide and 6 feet 6 high on the upper deck for the use of Chinamen wishing to smoke opium.

N. NEUFELD, GRAND SQUARE AND UPRIGHT PIANO-MAKER, BERLIN. B. Hackfeld & Co. Agents for the Hawaiian Islands. The Sydney Mail, Saturday, January 17, 1890, page 117, 118. Pianofortes in the Exhibition. In our previous notice of the Pianos in the Exhibition (No. IV) in connection with those of the German Court, we were enabled to mention that eminent exhibitor of L. NEUFELD, of Berlin, and that summer of the year was a most successful one. Since writing that notice, the Sydney agents, Messrs. Balgove, Fox & Co., have given us an opportunity of seeing the instruments of which four are exhibited instead of two, as formerly stated. The first is a grand piano, 5 1/2 octaves overstrung, an acoustical metal frame in a cast-iron casing, the action is perfect unaltered repetition. All the modern improvements are applied, the instrument is covered in walnut, of the tone and light touch, and being in addition by far the most extensively sought to command the most ready market. No. 2 is an upright cottage grand with iron frame overstrung, well finished, and cased in a handsome frame in the Louis Quinze style. No. 3 is an upright cottage grand, simpler in the exterior, but with substantial metal frame, and all the evidences of thorough care in the internal construction. No. 4 is an overstrung upright cottage grand of very agreeable tone. Having thoroughly examined the workmanship and construction, and tested tone and touch, we are able to speak with confidence on the sterling merit of these instruments, especially when we compare the price with those of other exhibitors. We compare the price on exhibition at the store of B. HACKFELD & CO. 104 FORT STREET, N. Y.

THE AIR SPACE. YUCCA BOILER COVERING. Patented January 16, 1890. Has been victorious over all other devices for covering boilers with which it has been brought into competition, both in Europe and America. For the past twelve years, endorsed by the Scientific American and London Engineering everywhere as being the best Non-conductor, the most Reliable, the most Economical. THE AIR SPACE. The "Air Space" is a mechanical device. The old method of covering boilers, steam and other hot pipes, was to smear a coating of plaster over the boiler and pipes, and directly in contact with the hot surface, a common sense teaches that any compound thus applied would, when subjected to the heat of the boiler, and the expansion and contraction of the metal over which it is smeared, will cause it to loosen and crack, so that it will, after a time, fall off. Besides this, experience has proved that the lime and other compounds used for this purpose, when applied directly to the boiler surface, corrodes the boiler so as to greatly injure them. The "Air Space" serves a twofold purpose. First, it provides a stratum of air entirely around the boiler, which is the best known non-conductor of heat. Second, it provides a surface which is entirely independent of the boiler surface upon which the covering compound is placed, and the surface being formed of wire cloth, it is not liable to crack, because the steel allows a substantial movement without disturbing the surrounding wire and cover. Application and practical tests have demonstrated beyond a doubt that the reduction of heat from a boiler is less than that from a boiler with any of the other well known boiler coverings; consequently there is a saving of fuel. A proof of what is said about the superiority of the "Air Space" is given in the Scientific American, Dec. 1, 1887, and London Engineering, July 12, 1887. G. C. POWELL, Sole Owner for Pacific Coast. H. HACKFELD & CO., Agents. 104 FORT STREET, N. Y.
