# HAWAII WILL ERECT PEACE PALACE AT PANAMA-PACIFIC EXPOSITION

Council Chamber for Nations Upon the Shores of Pacific Ocean—Wonderful Aquarium With Strange Fish from the Tropics—Sea Water Will Be Carried from the Farallones—Palms to Be Used in Construction of "Hague of the Pacific"

[Special Star-Bulletin Correspondence] SAN FRANCISCO, Aug. 12.—Plans for the erection of a unique and beautiful Pan-Pacific pavilion on the Panama-Pacific International exposition grounds, to be built by the people of Hawaii and donated to all the countries washed by the Big Western Ocean, to be used as "The Hague of the Pacific," have reached San Francisco on the steamship Matsushita. The tentative plans have been submitted to the exposition officials by A. P. Taylor, resident representative of the Hawaiian exposition commission.

The idea of the proposed auditorium is as novel as the plan of the building is distinctive. It is designed to be used as a common council chamber for representatives and visitors from all countries in and bordering upon the Pacific, including Hawaii, Australia, New Zealand, Samoa, China and the Philippines, representatives of all these countries having approved the scheme. It is also supported by the "Hands-Around-the-Pacific-Club" of which ex-Governor Walter F. Frear of Hawaii is president, by the Hawaiian Promotion Committee, and by such well-known men as J. P. Cooke, the sugar magnate, who have guaranteed the cost of the pavilion. Sneaking of the design of the proposed Pan-Pacific pavilion, Commissioner Taylor said: "The building as planned will follow the tropical lines of the old-time Samoa council house, with graceful fold drapes of the regular tan cloth of the south seas, in lieu of walls. It will be about 100 feet long and 60 feet wide, with the towering conical roof of palm or coconut thatch. The Samoa council chambers were considered neutral ground, where all the tribes were wont to gather to settle differences and to promote the general welfare. And so the design is peculiarly appropriate for a pavilion planned to house the council of commercial bodies and clubs of all the Pacific peoples. It will be appropriate also at this time of European strife, as the peace pavilion for the exchange of methods and the cooperation of the Pacific communities in everything that will draw the world's attention more generally to the wonderful resources and products of this half of the world. It is the idea of Alexander Hume Ford, editor of the Mid-Pacific Magazine, who has just returned from a tour of all the countries included in the interest of the 'Hands-Around-the-Pacific Club.' This club is offered by such well-known men as Wm. Cameron Forbes, ex-Governor general of the Philippines; Andrew Fisher, prime minister of Australia; Sir Joseph Ward, prime minister of New Zealand, and Chancellor David Starr Jordan, of Stanford, if the plan is approved by the exposition officials. The structure will be donated by the Hawaiian people to all of the Pan-Pacific countries for their common use during the ten months of the exposition period."

The Pan-Pacific Pavilion although the contribution of the leading business men of the Hawaiian Islands, is distinct from the official Hawaiian building whose ground-breaking celebration occurred on July 7, and which will be used as a combined club house and exhibition building. For its official headquarters building and display, the Hawaiian territory has appropriated \$100,000. This building, now under process of construction, is designed with the idea of creating the charm and atmosphere of modern Hawaii. "The Paradise of the Pacific," while the pavilion proper is the Dan-Deffen, council chamber will look back to the old-time architecture of the old kings of Samoa.

The Hawaiian building will be completed in December, at which time the secretary of the territory, W. W. Thayer, and Chairman H. P. Wood, of the Hawaii exposition commission, will come to San Francisco formally to take over the building from A. P. Taylor, the present representative of the commission. The architecture follows the low-lying tropical type so common in Honolulu. The exterior will be of stucco, tinted to harmonize with the imitation Travertine-marble effect which prevails throughout the exposition. The roof is of red tiles. The main entrance leads through a pergola and open "lanai" into a tropical garden, reception room, rest rooms, etc.

Across from the rotunda will be the great aquarium, while at either side will be the large exhibition rooms. In the angles of the Kings will be two principal domes, consisting of artificially illuminated scenes of typical spots in Hawaii. One of these shows the famous Paoli or precipice near Honolulu, from which is obtained a view of the entire side of the island of Oahu. It was at this Paoli that Kamehameha the Great, more than a

century ago, defeated the Oahu army. In the rot the Oahuans plunged in a mass over the precipice to death 1000 feet below.

The aquarium, 66 feet by 30 feet, will be the most interesting feature of the building. The glass tanks will be filled at intervals with pure sea water obtained from near the Farallones by steamers and brought to the exposition grounds, and there pumped to the Hawaiian building. It will be stocked with the rarest and most beautiful fish of the mid-pacific ocean, brilliant of color and grotesque of shape. It is being laid out under the direction of Prof. Kofoid, of the University of California, who has an international reputation as a specialist in aquariums. In the exhibition wings will be graphically depicted the two great industries of the islands, sugar and pineapples, besides exhibits of historical relics and others illustrating the life of natives. Around the rooms will be handsomely executed casts of Hawaiian fruits. These by Sculptor Usborne will be very attractive in form and coloring. There will also be handsome kiosks of koa wood (Hawaiian mahogany) containing large transparencies and meteorological data.

In the center of the main hall will be the native singing boys, whose fame as vocalists has spread around the world. The peculiar pathos of the heart-tugging melodies will be heard, as well as those of "letter vein." The Hawaiian music has the peculiar power of interpreting the varying moods of the people, from deepest pathos to bubbling laughter. A special feature will be the lecture room arranged for motion pictures in colors, and stereopticon slides. The wall of the stereopticon room will carry a fine display of enlarged photographs and paintings of island scenes. All in all the territory described by Mark Twain as "the finest little fleet of islands in the world" will make one of the most interesting displays of all the 42 states and 40 foreign countries which have committed themselves to the erection of buildings and the installation of exhibits at the Panama-Pacific International exposition.

STOMACH TROUBLES DUE TO ACIDITY SO SAYS EMINENT SPECIALIST. So-called stomach troubles, such as indigestion, wind, and stomach-ache, are in probably nine cases out of ten simply evidence that fermentation is taking place in the food contents of the stomach, causing the formation of gas and acids. Wind distends the stomach, and causes that full, oppressive feeling sometimes known as heartburn, while the acid irritates and inflames the delicate lining of the stomach. The trouble lies entirely in the fermenting foods. Such fermentation is unnatural, and acid formation is not only unnatural, but may involve most serious consequences if not corrected. To stop or prevent fermentation of the food contents of the stomach and to neutralize the acid, and render it bland and harmless, a teaspoonful of bisulphated magnesia, probably the best and most effective corrector of acid stomach known, should be taken in a quarter of a glass of hot or cold water immediately after eating, or whenever wind or acidity is felt. This stops the fermentation, and neutralizes the acidity in a few moments. Fermentation, wind and acidity are dangerous and unnecessary. Stop or prevent them by the use of a proper antacid, such as bisulphated magnesia, which can be obtained from any druggist and thus enable the stomach to do its work properly without being hindered by poisonous gas and dangerous acids.—M. F. For sale by Benson, Smith & Co., Chambers Drug Co. and Hollister Drug Co.—advertisement.

JAMES J. HILL PLANS TO IMPROVE BREED OF CATTLE IN NORTHWEST [Associated Press] LONDON, Aug. 17.—For the purpose of improving the breed of cattle in the Pacific northwest, some important purchases of English cattle have been made here for James J. Hill. One shipment is of 50 dairy Shorthorn bulls, which will be given away to as many counties in that section of the country. Each one of these bulls is born of a cow with a milk record of 10,000 pounds or more the year. Besides the gift of these blooded animals to the farmers of the northwest, a herd of ten cows and a bull of South Devons, the first to be imported to America, will be sent to Hill's Minnesota farm as well as two prize-winning dairy Shorthorns to his North Dakota farm. The purchases were made by Prof. Thomas Shaw, the well-known expert of Minnesota. According to Eugene Grubb, the United States livestock commissioner now in England, this is the most important shipment of blooded cattle ever made to America from England and will mean a great improvement in breed in the northwest both for milk and beef purposes.

## DEPARTMENT OF AGRICULTURE WILL HAVE CLASSES IN DOMESTIC SCIENCE

[By Latest Mail] WASHINGTON, D. C.—A plan whereby ten or more farmers or farm women can form home classes in agriculture or domestic science and receive the textbooks, lectures, lantern slides, laboratory and cooking equipment necessary to conduct them has been devised by the U. S. Department of Agriculture in cooperation with agricultural colleges of certain states. The object of the plan is to make accessible at home, to men and women who have not the time or means to attend the regular courses at the colleges, practical short courses in agriculture and home management specially adapted to their districts. These courses, which will consist of 15 to 20 lectures, and will consume five or more weeks, can be arranged to suit the spare time and convenience of each group of people. The courses to be offered at first are poultry raising, fruit growing, soils, cheese manufacturing, dairying, butter making and farm bookkeeping; and for the women especially, courses in the preparation, cooking and use of vegetable and cereal foods. The department will supply lectures and lantern slides covering these subjects, and the states which have agreed to cooperate in the plan will lead to each group laboratory and cooking apparatus valued at \$100 and a reference library. The textbooks and lectures will be made so complete that each group can safely appoint one of its members as study leader to direct the work of the course. When a group has decided to take up the work the state which cooperates sends an agent with the department's representative to organize a sample class and assist the leader whom they elect in laying out the work and in showing him the best methods of procedure. The classes commonly are held from 8:00 to 12:00 in the morning, two or three days each week. The sessions are not held every day, so that the members will have time to attend to their farm duties in between the sessions, as well as before and after the instruction period. The classes meet commonly at the most convenient farmhouse. During the morning hours text book work is done. In the afternoon laboratory work is conducted, and the women who have elected to take the domestic science courses have practical lessons in cooking. As soon as a class is established, the state organizer withdraws to start a class in some other district. The work thereafter is left in charge of the leader, who receives assistance by mail from the college or the department in carrying on the work. As there is no regularly paid instructor, classes can be carried on all over the state as rapidly as the college organizer can visit the groups, and as quickly as the laboratory sets supplied by the college become available. The local leader will preside during the reading of the lectures and references, for which full texts and lantern slides are supplied by the department. He will also be responsible for the laboratory equipment. Every one who completes the course will receive a certificate from the state college.

Not all of the states have yet agreed to cooperate in this plan. Last winter experiments along these lines were carried out successfully in Pennsylvania, and this has stimulated an interest in the method in other states. In one of the Pennsylvania classes more men applied than could be accommodated, and all of the 20 men and 15 women who began the course completed it. Pennsylvania is now arranging for more classes, while Massachusetts, Michigan, Vermont and Florida expect to take up the work. Other states such as Maine, New York, New Jersey and Delaware have signified their willingness to cooperate. Ordinarily a college in a state usually applies to the department seeking its cooperation, when sufficient interest has been shown in the plan in several communities where ten or more people have sought the instruction. For financial reasons, certain colleges are not so able to engage in the work as are others. The advantage claimed for the new home courses with local leaders and laboratory equipment over the ordinary correspondence courses is that only a small percentage of those who take the individual correspondence course finish it. Studying in a group, with laboratory work and leader, seems to stimulate the interest and add a social feature which lead the members of the group to follow the work conscientiously and complete it. Experiments with free correspondence courses show that while many individuals gain advantage from them, many others, because the material is furnished free, do not feel the same obligation to complete them as they do when they pay a substantial sum of money for the instruction.

## NATIONAL FLAG IS ADOPTED BY ICELAND

COPENHAGEN, Aug. 17.—A band of Icelandic patriots have designed a national flag which they propose to fly not only over Iceland but on all vessels registered in that country. If they had been content to make their flag a strictly local affair, for which permission had already been granted by the Danish king, all would have been well. But the Danish parliament has now taken up the question of the marine flag on account of the activities of the Icelandic "independence" party. The people of Denmark are of a divided opinion as to Iceland. Some feel that the Icelanders are acting in a very ungrateful way in view of past favors, and others that to give Iceland its freedom would rid the country of a source of useless expenses. Iceland's new flag is of a navy blue field, marked with a white cross whose arms extend to the four sides, and a cardinal red cross of half the size set within the white. It was not until after the state council approved the Icelandic home flag, following negotiations between the Icelandic minister and the Danish prime minister, that the agitation was taken up by the patriots for its use as a commercial and marine emblem. The Icelanders cannot have their new colors recognized by foreign powers as a national flag without the consent of the Danish parliament.

## GERMANY'S POPULATION NOW ABOUT 65,000,000

It is pointed out to the Star-Bulletin that an article recently published from the San Francisco Chronicle referred to Germany's population as 32,040,166. This is clearly a mistake; as Germany's population is around 65,000,000.
