Because the Weather Has Been Unusually Cool.

Cherries and Other Early Varieties Injured Very Materially—Grain Crops Doing Well.

Weather Bureau Director Barwick makes public the following summary of weather and crop reports for the week ending on the 27th: The average temperatures for the week ending Monday, April 27th, were as follows for the places named: Eureka 56 degrees, Fresno 48, Los Angeles 56, Red Bluff 50, Sacramento 52, San Francisco 50, and San Diego 56. As compared with the normal temperatures, there is shown a very great deficiency in heat and a very great excess in rainfall. The heat deficiencies are as follows for the places named: Fresno 16 degrees, Los Angeles 5, Red Bluff 12, Sacramento 9, San Francisco 7, and San Diego 8. The rainfall during the week was for Eureka 2.20 inches, Fresno 3.10, Los Angeles .20 of an inch, Red Bluff 2.50, Sacramento 3.16, San Francisco 3.10, and San Diego .10 of an inch. As compared with the normal precipitation, there is a very great excess shown, as follows: Eureka an excess of 1.40 inches, Fresno 2.86, Red Bluff 2, Sacramento 2.68, San Francisco 2.67, Los Angeles and San Diego show deficiencies of .13 of an inch and .11 of an inch, respectively. The climatic conditions of the week have been very unfavorable to the various crops.

**TEHAMA COUNTY.**  
Red Bluff—The frosts of the week have done severe damage to crops of all kinds. The weather has been cold for the time of year. Corn—The frosts of the week have done no very material damage, but the rains have been very beneficial to all crops. Vines—Crops are doing well under the good weather that has been experienced during the week.

**BUTTE COUNTY.**  
The cold weather has been detrimental to crops of all kinds. Highest lowest temperatures, 59 degrees and 35 degrees. Honey—Weather cold and disagreeable and not beneficial to crops. Palermo—Weather during the week very unfavorable to crops.

**GLENN COUNTY.**  
The rains have been beneficial to crops of all kinds. Elk Creek—The rain has been very beneficial to all crops. Stony Ford—The continued frosts have done much injury to fruit, and also to some young alfalfa. Sites—The frost has nipped early potatoes and other vegetables. Lowest temperature, 33 degrees; rainfall, 2.96 inches.

**COLUSA COUNTY.**  
Lowest temperature was 30 degrees, which did some damage to fruit and early vegetables, while the rainfall has been very beneficial to the grain and hay crops. Grand Island—The frost has damaged nothing, while the rainfall has been very beneficial to crops of all kinds. Highest and lowest temperatures, 62 degrees and 38 degrees, with 2.06 inches of rain.

**SUTTER COUNTY.**  
West Butte—The potato crop on the low grounds has been severely damaged by the frosts of the week. YUBA COUNTY. Wheatland—Several of the bottomland farmers have cut their first crop of alfalfa, which has not turned out very well. Barley sown for hay on the redlands is almost ready to cut. The grain hay crop this year will not be as large as last year, as there is very little barley but what can be cut for grain.

**PLACER COUNTY.**  
Newcastle—Highest and lowest temperatures, 60 degrees and 30 degrees. The high winds and heavy rains have done some damage by knocking fruit off the trees. Rainfall, 2.57 inches. Penryn—Owing to the cold, rainy weather, the fruit crop is backward. The frosts of the week have done but little if any damage. The rains have been very beneficial to new orchards. Roseville—Grain and grass have not advanced very much in the last week, on account of the cold weather; but the rain has been very beneficial to the growing crops.

**SACRAMENTO COUNTY.**

Heavy rains have retarded the ripening of cherries and berries. Grain and grasses are looking exceedingly well. Highest and lowest temperatures, 62 degrees and 39 degrees, with 3.16 inches of rain. Union House—The rains have been of great benefit, but have retarded summer plowing. Franklin—The rain has been beneficial to the crops. Elk Grove—The heavy rains have caused the creeks to overflow, thereby damaging alfalfa on the low grounds. There has been the hardest frost known for many years, as the thermometer went down to 28 degrees. Cherries are ripening, and are also being shipped to the various markets.

**YOLO COUNTY.**  
Capay—The rains have helped greatly the winter-sown grain; the rainfall amounted to 5.32 inches for the week. Citrona—The frosts of the week have about killed all the grapes in this vicinity, but those in the foothills escaped with but little damage. Davisville—The frosts have seriously injured young vegetables, but the fruit crop is too far advanced to be injured. Elmira—The frosts have done a great deal of damage to the orchards, vineyards and gardens of this vicinity.

**SOLANO COUNTY.**  
Davisville—The frosts of the 18th and 19th played havoc with the vineyards of this section. The first crop of grapes is not all destroyed, but there is not enough left to amount to anything. The tree fruit and the grain are O. K.; the vegetables were all killed, and a very large share of nursery stock was badly damaged. Highest and lowest temperatures, 52 degrees and 39 degrees, with 3.68 inches of rain. Elmira—Generally speaking, there has been no damage to crops by the frost, but there has been great benefit to grain, grass and hay by the heavy rains. Highest and lowest temperatures, 66 degrees and 47 degrees, with 4.66 inches of rain.

**CONTRA COSTA COUNTY.**  
The almond trees in the sandy lands will this year produce an enormous crop; even the very young trees are loaded down with fruit.

**NAPA COUNTY.**  
Napa—The early part of the week was frosty, but there has been but little damage reported. The rains have been very beneficial to grain, grass and hay. Highest and lowest temperatures, 65 and 32 degrees, with 2.92 inches of rain. St. Helena—Frosts have killed or very badly injured all the grape crops in the valley. The rainfall for the week was 4.38 inches, making 42.41 inches for the season.

**SONOMA COUNTY.**  
The heavy frosts have not damaged our vineyards, because they are mostly situated on the hillsides, and therefore the cold wave drops down below the hillside vineyards. Grainfields never looked better. Forestville—The climatic conditions have been very unfavorable for crops of all kinds. Highest and lowest temperatures, 70 and 32 degrees, with 2.10 inches of rain. Peachland—The cold west winds have kept back fruit and grain, and the frosts have done considerable damage to crops, but the rains of the week have gone a long way toward recuperating such as were damaged by the frosts of the previous weeks.

Healdsburg—The peach crop will be a light one. Prune-growers say bugs are doing a great deal of damage. Sonoma—The frost of the 20th caught this valley, with disastrous results to the wine grapes. It was the most serious frost of the season, the lowest temperature falling to 32 degrees, which is exactly the freezing point. It has played havoc with all the vineyards except those lying on the hillsides. Since 1886 there has not been so much rain in April. The rainfall at this time is 2.56 inches, which was precipitated in twenty-four hours, making 4.70 inches for the month and 28.25 inches for the season. Hay, grain and pastures never looked better, but the fruit crop will be a light one. Santa Rosa—Grapes in all the lowlands were nipped. In some localities, where cultivation advanced the growth, nearly the entire first crop was killed. In other places, even on the hills, more or less damage was done. So general is the damage to grapes, especially in Napa and this county, that very many will depend on a second crop for any money whatever. This largely applies to prunes, peaches and cherries.

**ALAMEDA COUNTY.**  
Irvington—The frosts of the week have done some damage to grapes on low ground; the heavy rains also injured grain by knocking it down where it was heavy. Livermore—Mr. Doty, one our most

prominent and intelligent vineyardists, says: "I believe that late pruning is a necessity in this valley, in order to escape late spring frosts. I pruned some of my vines in January, others in February, and the remainder in March. Those pruned in January came out early, and were injured by the frost in the latter part of March; those pruned in February were not out so much, and were not so badly injured as the former; those pruned in March escaped the frost of the 16th."

**SANTA CLARA COUNTY.**  
Gilroy—The frosts of the week have done serious damage to vines and all fruits, even in places where smudge fires were used for protection. Campbell—The effects of the recent frosts in our orchards are more serious than at first thought; both apricot and prunes have suffered severely. The cherry crop will be a short one, on account of the persistent dropping of the fruit; even the larger fruit is dropping. San Jose—The first of the week brought a severe frost, which has injured the fruit crop greatly. Santa Clara—The frosts have injured grapes very much, but the rains have done a great amount of good.

**SAN BENITO.**  
Hollister—The abundant rains during the week have made a great change in the crop prospects; farmers now feel confident of raising a good crop of grain and hay, but the fruit crop will be a very light one. Highest and lowest temperatures, 68 and 26 degrees, with 1.43 inches of rain.

**LOS PINOS.**  
The severity of our recent frosts had the effect of killing about one-half of our apricot crop and damaging, to a degree, various other fruits and green crops. San Juan—It is reported that prunes, apricots and peaches are about all killed by the late frosts.

**SAN JOAQUIN.**  
Lodi—The weather has been cool, cloudy and damp, with considerable rain during the week, amounting to 1.26 inches, which has been favorable to grain and grasses. The killing frost of the 20th about finished the grapes; as yet the fruit does not show any bad effect. Highest and lowest temperatures, 66 and 34 degrees.

**STANISLAUS.**  
Crow's Landing—The rainfall of the week amounted to 1.10 inches, and was just what the grain needed, and if very drying north winds do not follow rain, then a vast amount of good will be done. The early-sown grain will no doubt make a very good crop, but more rain will be needed for the winter-sown.

**TURLOCK.**  
The week has been favorable to all crops. The rains have been of the very greatest benefit; the total rainfall for the week was 1.57 inches. The frost of the week cut down the early vegetables, such as potatoes, beans and the first crop of grapes. Westley—The crop prospects are much lighter than last week, but the warm rains of the week have done a great amount of good.

**MERCED.**  
Volta—Light showers have been the chief feature of the week; while they have not been very beneficial, they have not been detrimental, because the cool and cloudy weather accompanying them was of great benefit to grain, grass and hay. Livingston—The rains of the week have been of the very greatest good, and all growing crops are in a very prosperous condition.

**FRESNO.**  
Huron—Very little, if any, grain will be cut this year in the Huron country; there will be some hay, but not a great deal. Ponton—Apricots are still dropping, but all other kinds of fruit appear to be in good condition. The vineyards were severely damaged by the frosts, and very few of them in this vicinity will amount to anything, as far as the first crop is concerned. The rains of the week have produced a very beneficial effect on all growing crops. Highest and lowest temperatures, 67 and 36 degrees, with 1.97 inches of rain.

**REDFIELD.**  
The rains of this week have been of the very greatest benefit to this county, and have improved the grain prospects very much. Highest and lowest temperatures, 72 and 48 degrees, with .75 of an inch of rain. Auberry—Crops were damaged by the heavy frosts, but benefited by the rains of the week. MADRERA. Madera—The very heavy frosts have killed all the apricots and severely injured the peach crop. All fruit in the mountains and foothills has been killed, or very badly damaged.

**TULARE.**  
Tulare—The rains have been very beneficial to all the growing crops. Highest and lowest temperatures, 80 and 32 degrees, with .64 of an inch of rain. Lime Kill—Weather very beneficial to all crops. Highest and lowest temperatures, 76 and 34 degrees. Travers—The frosts of the last week have damaged the first crop of grapes in this locality, but the damage is slight. Other fruit is all right yet, as the trees now show more sound fruit than they should be allowed to mature. Tipton—"Jack Frost" did not forget to call upon us during the week. Plums, prunes and the first crop of grapes were killed; some orchardists report peaches badly injured, while others say they were not hurt at all. Dinuba—Frost has done much damage in the vineyards in this vicinity; the young shoots were nearly all killed. Tulare—The last week's weather was cold and frosty, and very destructive to tender crops.

**KERN.**  
There will be but a small crop of grain raised in this vicinity. Bakerfield—The prevailing cool weather has been detrimental to growing crops. Grain is looking well, and some of the farmers are cutting hay. The first crop of grapes will be a small one, but the second crop is expected to be a very good one.

**SANTA BARBARA.**  
Ballard—Almost complete reversal of conditions of weather for the season, as we are now having storms that properly belong to January and February. The frosts of this week have been very detrimental to the vegetable growth, as well as to the vineyards.

**SANTA MARIA.**  
Highest and lowest temperatures during the week, 68 and 48 degrees, with 1.50 inches of rain. The fruit has been irreparably damaged, and the best weather in the world will not bring it to perfection. Guadalupe—The rains have been of great benefit to crops of all kinds. Carpinteria—The rains of this week have been of the greatest benefit.

**VENTURA.**  
Saticoy—The crop of barley will be a light one. Ventura—The weather conditions for this section at the present time have been the most unfavorable that the past thirty-five years have given us.

**SANTA PAULA.**  
The temperature has been considerably below the normal for April, although no damage has resulted to the citrus fruit. Near Piru it is reported that the almond crop is about ruined. Highest and lowest temperatures, 66 and 35 degrees, with 1.50 inches of rain.

**ORANGE.**  
Tustin—The weather has continued unseasonably cool; there has been frost on two mornings; no damage has occurred, except slight injury to potatoes planted on low ground. Apricots have set unevenly; some orchards are well set, while others are very poorly set. Barley has improved under the good weather conditions.

**RIVERSIDE.**  
Arlington Heights—Orange and lemons have been growing very little during the past month on account of cool weather. Compton—The prospects are very poor for good crops in this vicinity.

**SAN DIEGO.**  
Poway—The weather, on the whole, has been favorable to the growth of feed and grain. There has been slight injury by frost during the week. Highest and lowest temperatures, 65 and 42 degrees, with .09 of an inch of rain. Bernardo—Frosts have damaged corn, beans and fruit during the week.

**EL CAJON.**  
The weather for the past week has been cool, especially the nights. The rains of the week have helped the crops very materially. Otay—The weather has been favorable to crops. Picacho—April has been an excellent month for the growth of crops. Highest and lowest temperatures, 90 and 51 degrees, with no rain.

**HUMBOLDT.**  
Eureka—All vegetation backward, which is due to excessive moisture and lack of sunshine. Rainfall, 3.14 inches. MENDOCINO. Ukiah—The rains have knocked down some grain, but the absence of wind was an agreeable feature. Highest and lowest temperatures, 60 and 30 degrees, with 3.13 inches of rain.

**MONTEREY COUNTY.**  
Join—The weather has been favorable to the crops of grain, but the frost has damaged the fruit crop to a considerable extent. Lowest temperature, 28 degrees; rainfall, .91 of an inch. SANTA CRUZ COUNTY. Felton—The heavy frosts have damaged the fruit crop. The wind has done some damage to fruit. The hay and grain crops are doing well. Highest and lowest temperatures, 64 and 34 degrees, with 2.10 inches of rain.

**SAN LUIS OBISPO COUNTY.**  
San Luis Obispo—The frosts of last week were more injurious than at first anticipated. The rains of the week have been of very great benefit to late crops. The prune crop has been badly injured by the late frosts. Pastures have been greatly benefited by the rains. Paso Robles—There was a continuance of the low temperature of last week, which has been detrimental to fruit, but the rains of the week have been very beneficial to the growing grain and hay crop. Highest and lowest temperatures, 60 and 28 degrees.

**MODOC COUNTY.**  
Adin—The fruit crop has not been damaged by the cold weather. Buds on the trees have swelled some, but it is thought they were not developed enough to be hurt. SISKIYOU COUNTY. Yreka—Weather continues very cold and unfavorable. The probabilities are that the early fruit is about killed. Highest and lowest temperatures, 61 and 26 degrees, with 1.34 inches of rain.

**SHASTA COUNTY.**  
Shasta—Owing to so much cold and rain, vegetation of all kinds has made little progress. Grain and grass are looking well. Considerable stock has been driven to the summer ranges. Rainfall, 7.55 inches. Hotel Arrivals. Arrivals at the Golden Eagle Hotel yesterday: J. Hemingway, Chicago; J. Hennessy, S. Joseph; Jas. T. Anyon, New York; P. P. Payson, H. Y. Cook, J. Goldsmith, Jr., F. M. Sanger, E. D. Bates, New York; R. J. Prince, G. W. Cook, Boston; Wm. M. Purcell, Lodi; Frank Sandu, Fred C. Marx, New Orleans; A. W. Brown, Salt Lake City; W. S.
