BROWN CHEMICAL CO.
Baltimore, Md.
See that all Iron Bitters are made by Brown Chemical Co. and have crossed red lines and trade mark on wrapper.
BEWARE OF IMITATIONS.

THE LIFE OF ITS FUNCTIONS.
It has been demonstrated that the larger portion of the blood of the family is subjected to the action of some derangement of the Liver. This is not only the largest, but the most important of the organs of the body. It is the seat of the circulation of the blood, and it is from it that the life of the body is sustained. It is also the seat of the elimination of the waste products of the body, and it is from it that the life of the body is renewed. It is the seat of the production of the bile, and it is from it that the life of the body is nourished. It is the seat of the production of the sugar of the blood, and it is from it that the life of the body is energized. It is the seat of the production of the heat of the body, and it is from it that the life of the body is warmed. It is the seat of the production of the motion of the body, and it is from it that the life of the body is animated. It is the seat of the production of the life of the body, and it is from it that the life of the body is sustained.

PROF. W. SEWELL,
Baton Rouge, La.

ST. TAMMANY PARISH. ITS LOCATION—HEALTH—PRODUCTS—MANUFACTURING AND AGRICULTURAL ADVANTAGES, ETC.

St. Tammany parish is located twenty-two miles north of New Orleans. Covington, the county site, is ten miles further north, in the interior, and is delightfully located on the Bogue Falia.

IMMIGRANTS,
with a small amount of capital and a fair supply of industry and perseverance, cannot possibly do better than locate in our parish. The climate is as fine as any in the world. The winters are generally mild, and snow rarely falls. Spring opens early in February, with blossoms on the peach and quince trees, and vegetation comes rapidly forward. The heat of summer is moderate, and the unfailing breezes of the evening refresh man and beast after the labors of the day.

THE SOIL
is very productive, and admirably adapted for raising sugar cane, cotton, oats, corn, rice, peanuts, etc. The vine is indigenous, and yearly bears large harvests of delicious fruit—Oranges, pears, peach, plums, quinces, figs and pecans thrive well.

CATTLE AND SHEEP
graze upon our pine lands throughout the year, and seldom are fed in winter, thus making St. Tammany the stock-grower's home. Farming and stock lands can be purchased at rates varying from \$1 to \$5 per acre, and Government lands to actual settlers.

WATER POWER.
There is an abundance of water

the attention of manufacturers. We have no doubt a small factory, such as already abundant in Alabama and Georgia, for the purpose of converting our cotton crop into yarn, would prove a paying investment.

FIRE CLAY
is found in abundance, as well as clays suitable for pottery ware of the very finest texture, purely white, and free from sand or grit. Persons having a practical knowledge of such business would soon realize a fortune in manufacturing and shipping such wares to the New Orleans market.

MANUFACTURE OF GLASS
Sand suitable for the manufacture of glass is also abundant all along the banks of the Bogue Falia, above the town of Covington. It has been practically tested by Pittsburg manufacturers, and found to contain all the necessary properties to produce the finest glassware.

COVINGTON,
the county site, contains about eight hundred inhabitants; and is the best business point in the parish, commanding much of the trade of both St. Tammany and Washington parishes. The mail from New Orleans arrives three times a week, per steamer New Camelia, and there is some talk of building a telegraph line.

At present there is no mill or manufactory of any kind in Covington. Building sites for manufacturing purposes can be had on the most favorable terms, and every facility will be offered for immigrants to this parish.

To all honest and industrious immigrants who may wish to settle in St. Tammany, a hearty welcome is extended and protection guaranteed in their respective occupations.

BADEN-BADEN.—Thousands of Americans seek health during the summer months by quaffing the crystal waters of some fashionable springs, while just as many sufferers remain at home through sheer necessity. The Baden-Baden Springs, of Germany, are perhaps the most noted in the world. The water of these springs is Aperient, acting pleasantly and gently upon the stomach, bowels and kidneys. The active principles of these celebrated springs have been combined, forming a beautiful white salt, which has been bottled up for family use, and is now offered the American people under the name of

Bailey's SALINE APERIENT, at 50 cents per bottle. The salt possesses all the qualities of Baden-Baden water, is very pleasant, effervescent and sparkling, relieving constipation, sick headache, sour stomach, etc., at once.

THE COMET.

Says the New York Sun: Everybody who can command the use of a telescope ought to get at least one look at the new comet before it becomes visible to the naked eye. It is a sight to be remembered, especially if the comet should make as great a display within the next two months as the astronomers predict it will. Remembering that this gives promise of being one of the grandest comets ever seen, it is interesting to look at it in its babyhood. It is far from possessing anything imposing in its appearance. The inexperienced observer has to look twice before seeing it at all, especially if the telescope he is using be of small aperture. Yet anybody can see that it is an infant Hercules. It has a head like a star, compact and brilliant, and it trails behind it in its million-mile-a-day flight, a little, straight, bright tail, bigger already, away out there in space, than most comets are able to display at their perihelion. Looking at this little comet in the telescope, it is difficult to realize its power and possibilities, or comprehend the speed with which it is darting toward the sun.

The later measures confirm the first indications that the comet will go extraordinarily close to the sun. No astronomer has succeeded in identifying it with any previous comet, and it is probable that this is its first visit to the solar system, at least since men have made records of celestial phenomena. It is not impossible that it last exhibited the glories of its train to the inhabitants of the worlds revolving around some distant fixed star.

The question is frequently asked, "How large will the comet be?" It is impossible to say more than that, judging from the brightness of its nucleus, and the present rate of increase in the size of its tail, it ought to be a more brilliant comet than that of last summer. But nobody can promise that it will be, because the nature of comets and the laws that govern the development of their tails, are not well enough understood to enable astronomers to make positive predictions concerning their appearance.

This comet's position when nearing the sun will not be such as to give us the best view of its tail. The comet of 1858, like this one, was watched from the time that it appeared as a faint object in the Western heavens, it seemed to span half the arch of the sky, making the autumn evenings brilliant with its light. By the 1st of May this comet should be conspicuous to the naked eye.

All sorts of sleeves are admissible for ladies' dresses, but the coat sleeve, around the waist, is still the favorite.

No one loves to tell scandal, except to him who loves to hear it.

When physicians have made use of a prescription for years in their private practice with certain success, it is a duty they owe to mankind to put such remedies within reach of all, and this is done by "copyright,"—such is the case with Dr. Sherman's PRICKLY ASH BITTERS, and they have proved to be a blessing to mankind.
