

WHY NOT GET A GUARANTEE?

Every Article of Merit That is Sold These Days is Guaranteed—No Guarantees Often Means Poor Quality.

There is very little excuse for any person to claim that he has been "stung" on a purchase. Fifty years ago the buyer had to look out, but today it is unusual to find a merchant who will not return the money for any article that has proved unsatisfactory.

An excellent example of this kind of fair dealing is shown by the clean-cut guarantee that City Drug Store gives on Dodson's Liver Tonic.

These people tell us that any person who pays 50c for a bottle of Dodson's Liver Tonic and does not find it a harmless, but a sure reliever, of constipation and a perfect substitute for calomel, can get his money back just as quick a stby can get it out of the drawer.

Dodson's Liver Tonic has practically taken the place of calomel. It is absolutely harmless, sure in its action and causes no restriction of habit or diet.

PASS IT ALONG! YOU WANT A HOME!

BOGALUSA, LA., the "Magic City" of the South. 6 1/2 years old. POPULATION 10,000

Located on the New Orleans Great Northern Railroad. This railroad runs north from New Orleans, La., and connects with the Illinois Central R. R., at Jackson, Miss.

BOGALUSA is only 70 miles north of New Orleans. Largest saw mill in world employing 1500 men. Large paper mill employing 1000 men. Railroad shops employing 250 men. Creosoting plant employing 50 men. Steam laundry employing 25 men. Other industries employing 500 men. Twenty-five-ton ice plant.

Fine high school. Churches of every denomination. Two banks. Fifty stores. Y. M. C. A. Large hospital.

This town is located in the "Cotton Belt," the "Corn Belt," the "Truck Growing Belt," the "Ozone Belt."

Farming and grazing land in the vicinity of this growing town is offered by the GREAT SOUTHERN LUMBER Co., at from \$5 to \$10 per acre. Liberal terms and material advanced to settlers. These lands are going! These prices cannot remain in force for a very long period. Investigate today. Tell your friends. Write to the

Great Southern Lumber Company

(Cut-Over Land Department)

J. K. JOHNSON, Supervisor.

BOGALUSA, LOUISIANA.

Your House Is Larger

at certain times than at others. You don't notice it, but it is. The surface of your house contracts with the cold and expands with the heat. If the paint on your house does not contract and expand with the surface it will crack. One should therefore be careful about the paint used.

Red Seal White Lead and Pure Linseed Oil

make ideal paint. White lead is made from metallic lead, one of the most pliable of metals. It will contract and expand with the surface painted. Be sure the white lead is pure. We sell Collier White Lead and Dutch Boy Linseed Oil.

The Dutch Boy trade-mark is a guaranty of absolute purity and highest quality. We also sell varnishes and other paint supplies. Ask us for our "Painting Helps."

ALEXIUS BROS.

How the Fly is a Real Menace to Health, Why We Should Get Rid of Him, and some of the Best Ways to Do It.

By Mrs. W. N. Hutt, of Raleigh, N. C.

If I may judge from the letters I have received during the last few weeks, there are two classes of people, i. e., those who do not realize the danger of flies and those who wish to get rid of them. There was a time when we thought of them as scavengers, or, perhaps, as a nuisance, but it has remained for the perfection of the microscope and research to learn that they really carry the germs of tuberculosis, typhoid, second summer sickness and many other diseases. If you ever have the opportunity of seeing a fly through a microscope, you will be surprised to see that it is not hard and smooth like a beetle but looks more like a porcupine, and in the thousands of little hairs or bristles many disease germs can be carried.

The feet are soft pads and carry germs as does the sucking mouth. Even if they speak have bacteria in them. If anyone today doubts the deadliness of flies, it is because he has not had the opportunity of seeing for himself. It has been estimated that flies have killed more people than have been killed by all the wars and snakes and wild beasts in the world. Because their ways were indirect, we did not know it.

Dr. Cyrus Thompson says: "The housewife would be ashamed to have a bedchamber in her house, yet it is a clean, pleasant little creature compared with the fly."

The flies which we see in the spring have survived the winter in some sheltered place and come forth on the first warm days to lay their eggs in manure or any other decayed material. These eggs hatch out into little white maggots and they change into brown-shelled little creatures, like the buds of the balm of Gilead or Carolina poplar, and are called pupae. From them come the full grown flies.

Screen the House.

It is evident that if we wish the quickest way to get rid of flies, it is to get rid of their breeding places—that is, to allow no rubbish of any sort to be around and to keep the manner well cleared away from the barn. Now that it has been proven that there is less loss in manure when it is spread on the fields at once, than when allowed to lie in piles, we have no excuse for letting it become a fly breeder. Keeping the manure in bins has not proven very effective, even though the bins were screened.

Screening the house is almost necessary if we would prevent much sickness. Where the house can be well screened with wire screening it is best to have it. Cotton screening is cheap and will last a season. It can be tacked on the outside of the window, or, if there are blinds, a very simple frame can be made, the mosquito netting tacked or sewed to it, and kept in place by a couple of

nails. I know a back porch that has been screened with two bolts of mosquito netting, at 55 cents a bolt, for three years. The first screening did not take quite all the material and it has been used for protecting the last two seasons. If care is exercised in sweeping it will last a long time.

Fly Poison, and Fly Swatters.

Granted that the flies are here, how shall we get rid of them? The most effective means I know is formaldehyde. Get formaldehyde, 10 per cent pure (take no patent preparation, as the flies will not touch it—even flies object to their medicine being of the patent variety), put it in a saucer or in a nicked bottle inverted over a saucer, as we fix the drinking water for chickens.

Flies do not like kerosene. An excellent method employed by some shopkeepers is to have a small tin trough along the bottom of the window. The flies seem to hate the kerosene and they fall into the trough.

Such fly-killers as Black Flag are good. Most of them are made of pyrethrum powder. It can be bought at the drug store, made into little cakes with water and set on fire or it can be thrown on a hot shovel. The fumes stun the flies which should be swept up and burned before they revive.

A tablespoon of carbolic acid on a red-hot shovel is deadly, but must be used by some one who can back out of the room with expedition, and close the door with alacrity. Keep it from the children.

Fly traps catch many. The cone-shaped wire ones are best.

Fly poison and fly pads are good for those stray flies that elude screens and poisons and traps. One might as well hope to dip up the sea with a spoon, however, as to rely on the swat, if no other precautions are taken. To make the swat, secure a piece of wire, screening 425 inches in a roll of a piece of wood, at least a foot long, by several tacks. They are cheap and work like magic. We Can Get Him of Them.

Do not say "What is the use of my taking precautions? My neighbors will not." They will in good time. The fly nuisance is not hopeless. Asheville, N. C., is known as "the flyless town." France and Germany have very few and many whole provinces have none. They were exterminated in Panama in three years. If others can do it, so can we. Whatever we do, let us keep our food screened, keep flies away from the sick, and remember that cleanliness is next to godliness.

Dr. E. L. Demaree DENTIST
