ONLY A COLD BUT DON'T NEGLECT IT

A cold is an acute catarrh which can easily become chronic. A great many diseases may be traced to a catarrhal condition of the mucous membranes lining the organs or parts.

PE-RU-NA
AN IDEAL EMERGENCY REMEDY

Just a few doses taken in time have saved thousands from serious sickness. For fifty years Pe-ru-na has been the popular family medicine for coughs, colds, catarrh, stomach and bowel disorders and all diseases of catarrhal origin.

SAVINGS SERMONETTE

Number Twenty-Two.

THE NEWLY WEDS

A happy future is assured to those who commence their married life with a savings account. It provides for emergencies which are bound to arise at times in every life. Prepare for these emergencies by putting aside a portion of your income regularly. Be frank with your wife; tell her exactly the amount of your salary or income and ask her to help you to set aside a certain sum to be saved every month. Get in the habit of feeling that this amount must be saved. The time will come, as it does in every one's life, when a good savings account will enable you to take advantage of an exceptional opportunity or enable you to meet trouble bravely.

Don't put off starting your savings account—do it at once, and by this time next year you will have an account to be proud of.

We invite your account and will be interested in its growth.

SHERIFF'S SALE.

I. B. Rennyson vs. Succession of Mrs. Annie B. Koepf Rivers, wife of Grover C. Rivers.

Firestone

Why did sales of Firestone 3½-inch tires increase 96% the first six months of this year?

The motoring public found in the product exactly what it demanded—a *balanced* tire—uniform service.

You, multiplied by thousands, getting your most miles per dollar expended for tires, demonstrated the efficiency of the *balanced* 3½—the Firestone.

Firestone built a single plant (Plant No. 2) to specialize in tires for small cars and got results which have been passed on to you at low cost—most miles per dollar.

It is *more* than thickness of tread, the mystery of rubber compounding, the size of the breaker strip, the number of plies of fabric, the heavy cushion or the greater air displacement that has put greater tire mileage—more economy—more comfort at your call.

It is the *balanced* co-ordination of all parts of the Firestone 3½ by specialists who have given eighteen years' study and practice to tire needs. Ask your dealer.

TIMOTHY HAY IN ROTATIONS

Farmers Find Crop Good Stand-by Where Alfalfa and Clover Fail to Make Good Stands.

Farmers who have begun to find difficulty in getting stands of clover and alfalfa find timothy hay a stand-by with which to round out their rotations and which assures a crop without demanding much labor.

WHITE SWEET CLOVER CROP IS PREFERABLE

Breeding Is Much Easier Than With Red Variety.

Interesting Facts Brought Out by Recent Experiments Conducted by Department of Agriculture and Iowa State College.

Red clover, recent investigations have shown, is practically self-sterile; that is, under the influence of its own pollen a very small number of seeds on a given plant will set. In this respect it differs from white sweet clover, which tests have demonstrated will set nearly as many seeds under

the influence of its own pollen as it will with the pollen of another plant. This makes the breeding of white

Cutting Clover for Seed With Grain Binder.

sweet clover a much more promising undertaking than the breeding of red clover. These facts have been brought out by recent experiments conducted by the United States department of agriculture in co-operation with Iowa State college. The federal department's investigators plan to follow up these discoveries with the selection and breeding of white sweet clover for increased forage and seed production.

It was also found that sweet clover needs a great deal of moisture to mature the seed properly. This is one of the reasons why the second crop of sweet clover sometimes has a better seed yield than the first. There being a smaller amount of growth on the second crop, the plants do not draw on the water supply so strongly and there is more water left for the maturing of the seed.

BIG FACTORS IN TRAINING COLTS

Future Value and Usefulness Depend Greatly on Management While Young.

FIRST GET HIS ATTENTION

Education of Horse is Based on Reward and Punishment—Many Animals Made Vicious and Unreliable by Carelessness.

The breaking and training of colts is of prime importance, because their future value and usefulness depend to a great extent on whether or not they are well broken. By a broken colt is meant one that is safe to handle in the stable or on the road and that will promptly obey the orders of the driver or rider.

Memory and habit are the two main factors with which we have to deal in training horses. A horse acts through instinct and habit, and one of its greatest characteristics is uniformity of conduct. What a horse is once trained to do he will nearly always do under like conditions.

Education of Horse.

The first thing in training a horse is to get his attention. The second is to make him understand what is wanted. The education of the horse is based on reward and punishment. The reward, a pat on the neck, etc., should immediately follow the act of obedience. The punishment, to be effective, must immediately follow the act of disobedience.

Few horses are inherently vicious. Many horses are made vicious and un-

reliable by the carelessness or unnecessary brutality of their trainers. If a horse kicks because the harness hurts him, or shies at something of which he is afraid, punishment is not justifiable. If, however, after being stopped, a horse starts before receiving the command to do so, he should be punished. Horses are naturally obedient, and when thoroughly trained their conduct is uniformly good.

Best Training of Horse.

A horse should be trained so that he thinks there is no limit to his power to do the things required of him, and believes that he has no power to do that which is against the wishes of his driver. Above all, never ask of a

Work Horses Should Be Given Liberal Amount of Grain and Hay—Water is Also Important.

horse something he is unable to perform and then punish him because it cannot be done. If during the first year of his work a colt is hitched only to loads that he can pull, he will develop into a good work horse, while if he is overloaded a few times he may become balky and worthless.

All horses cannot be treated alike. A high-strung, sensitive horse must be treated gently, the dullard sharply. The same force applied to the sensitive horse that is necessary to make the dullard act would be likely to cause the high-strung horse to rebel, while gentleness would obtain obedience.

To train horses successfully a man needs to exercise great patience, gentleness and firmness. If you are training a horse and lose your temper, you had better put the horse into the stable until the next day, for further work at this time will be worse than useless and may undo the work already done.

KEEPING UP SOIL FERTILITY

Provision Must Be Made for Maintaining Production by Fertilizing and Liming.

A noted agricultural scientist once said that it is the business of every farmer to reduce the fertility of his soil by removing the largest crops of which the soil is capable of producing, but ultimate failure results unless provision is made for restoring and maintaining production by fertilizing and liming the soil until it becomes better rather than worse.

DAMAGE BY POOR SIRE

"A few poor cows may do a little permanent harm to a dairy herd, but a poor sire will do untold damage. One thousand pounds of milk per year is a conservative estimate of the improvement of the daughter's production to credit of a good sire."

—Prof. W. J. Frazor, University of Illinois.

Fender Noise.

When vibration has caused a more or less extensive crack in a fender there results a sharp, cracking noise that is very annoying and often is difficult to locate.

CAUSE OF POUNDING ENGINE

If Regular and Continuous It is Likely to Be From Lost Motion in the Bearings.

If a pound in the engine is regular and continuous it is likely to be from lost motion in the bearings. If it is irregular and occasional it is more likely to be due to preignition caused by incandescent carbon or from imperfect electrical connections. If the pounding is accompanied by occasional missing, especially if the missing is more frequent when the engine is idling, it is more apt to be due to imperfect electrical connections.

ESCHEW CHEAP GREASE CUPS

More Than Likely to Become Worthless in Short Time When New Ones Must be Bought.

Cheap grease cups are more than likely to become worthless in a short time. It is almost impossible for the ordinary man to turn one of these cups down, and even if he is able to, the operation may not send the grease home where it is needed. The only remedy for this condition is to install really efficient grease cups or get a lubrication system of the kind that puts grease in the bearings under high pressure.

TO REPLACE VALVE SPRINGS

Good Plan to Compress Each in Vise Until Short Enough to Go Easily Into Place.

An easy way of replacing valve springs consists of compressing each spring in a vise until it is short enough to go easily into place and allowing the holding key to be inserted, and, while in this compressed condition, tying it with wire so that it cannot expand. After it is in place and the key is put in the wire is clipped and removed.
