made directly from the original masterpieces, is selected by art experts and should attract large crowds. A small admission will be charged, the entire proceeds of which, after deducting the expense of the exhibit will be used in the purchase of pictures for wall decoration. The purpose of the exhibition is thus clearly two-fold:

First—To give people an opportunity to see a collection of the world's masterpieces of painting, sculpture and architecture.

Second—To make it possible for the public schools to own a few of these pictures.

Why should this exhibit interest you?

Because, throughout the country, people are awakening to the importance and value of good art as creative of a refining influence and inspiring atmosphere—and just so surely as people become familiar with the best in art, just so quickly will the crude in art be displaced through appreciation of something better. It is, of course, idle to suppose that one shall become a competent judge of art simply through studying for a time photographs of prints.

But what can and should be obtained is a large measure of appreciation. A work of art which is really great will bear reproduction, and even though this may not possess the pleasure-giving power of the original in a gallery three thousand

miles away, that measure of power which it does possess is well worth taking.

One great object of picture study is that of opening the eyes to the beauty all around which an artist's trained eye perceives, while it is missed by others. This is the essential service of all great men—to draw us up in some measure to their own level of insight, enjoyment and inspiration.

These pictures are of interest to both young and old, and they are expected to attract and instruct large numbers of people. Everyone should come.

TO OUR PATRONS.

On our last shipment of Barber Argentine Ant Poison, a few complained, stating that it was not as good as previous shipments. We wrote the Barber Artomological Laboratories who advised the trouble was with the user who did not use enough poison to each can, one quart being necessary to every six cans, and suggested that we shake the contents of the barrel thoroughly as sometimes the solid substance in the poison settles. We have just received a new barrel of the poison and feel confident it will do the work if directions are followed.

CALOMEL SALIVATES AND LOOSENS TREETH

The Very Next Dose of This Treacherous Drug May Start Trouble

You know what calomel is. It's mercury; quicksilver. Calomel is dangerous. It crashes into your bile like dynamite, cramping and sickening you. Calomel attacks the bones and should never be put into your system.

If you feel bilious, headachy, constipated and all knocked out, just go to your druggist and get a bottle of Dodson's Liver Tonic for a few cents which is a harmless vegetable substitute for dangerous calomel. Take a spoonful and if it doesn't start your liver and straighten you up better and quicker than nasty calomel and without making you sick, you just go back and get your money.

Don't take calomel! It makes you sick the next day; it loses you a day's work. Dodson's Liver Tonic straightens you right up and you feel great. No salts necessary. Give it to the

children because it is perfectly harmless and can not salivate.—Adv.
