

MEN WHO MAKE THE WORLD

Men who make the world of today are making The Youth's Companion what it is today. It is very much more than The Companion you may remember; no higher in purpose, but more lavish in material—large and improved with special Family Pages, Boys' Pages, Girls' Pages, and a constant supply of serials and shorter stories.

The editorial page of information, comment, science and events will keep any man well informed, while the Family Page helps on home improvements and ideas, and both boys and girls have special pages for themselves.

You do the family a good turn when The Youth's Companion "as it is today" is sent to the home. Fifty-two issues a year—not twelve. More reading than is found in any monthly magazine at any price.

You may not know The Companion as it is today. Let us send you three current issues free, that you may thoroughly test the paper's quality.

DR. SINCLAIR OF MONTREAL HERE

Dr. S. B. Sinclair of Mcdonald College, Montreal Canada, paid a visit to the Williams School on Thursday and visited a number of the classes. Dr. Sinclair is devoting the year to a study of educational institutions in the United States.

He expressed himself as greatly pleased with the work he saw and thought the people of Williams were to be congratulated on their educational progressiveness in the construction of such a fine building and in securing such an efficient staff of teachers.

He also said that in his opinion no better investment could be made than the establishment of a good High School where boys and girls from thirteen to seventeen could obtain the most valuable of all gifts, a sound practical education which would equip them for life in the best possible way.

The paper used by the government printing office each year requires approximately 125 million pounds of rag pulp.

A Winter Cough

A stubborn, annoying, depressing cough hangs on, racks the body, weakens the lungs, and often leads to serious results. The first dose of Dr. King's New Discovery gives relief. Henry D Sanders, of Cavendish, Vt., was threatened with consumption, after having pneumonia. He writes: "Dr. King's new Discovery ought to be in every family; it is certainly the best of all medicine for cough, colds or lung trouble" Good for children's coughs. Money back if not satisfied. Price 50c. and \$1.00 At all Druggists.

FOREST NOTES

F. A. Elliot, state forester of Oregon, says that cooperative fire patrol associations among lumbermen for prevention of forest fires have proved their worth.

Of 606 fires last year on the national forests of Arizona, New Mexico and Oklahoma, more than one-half were caused by lightning. Campers set about one-tenth, and railroads one-twentieth.

Roadside signs, each containing a single catchy sentence in large type, are proving effective in warning against fires on western forests. They give the essentials and tell the importance of protection against forest fires.

\$100 Reward, \$100

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.
Address: F. J. CHENEY & CO., Toledo O.
Sold by all Druggists, 75c.
Take Hall's Family Pills for constipation.

RANGE CAN BE RESTORED WITHOUT CLOSING IT

That a serious decline in the carrying capacity of vast areas of western grazing lands, due largely to the fact that stockmen fail to give range plants a chance to keep growing, can be remedied without closing these areas to cattle and sheep, is the statement made by the department of agriculture in a bulletin recently issued on range improvement. Excessive grazing in the spring before the forage crop is mature, and such grazing continued year after year, says the department, are the main causes of range deterioration.

On the national forests, the department points out, where the government is doing away with these evils and stock is handled under government regulation, the range lands have improved to a point where it is again possible to market large numbers of beef and mutton animals directly from the range.

In the "free for all" period of early days, the department goes on to say, the most palatable forage plants were so closely cropped that they were unable to develop the necessary plant food, and so literally starved. In addition, the roots were frequently injured by trampling or killed by exposure. As a result the best kinds of vegetation grew weaker from season to season, and where the practice of early and close grazing was continued, the range at last became practically denuded.

The vegetation which furnishes the grazing crop has much the same growth requirements as a farm crop.

No farmer who hopes to realize the best returns from a permanent hay meadow, it is stated, would think of harvesting the crop as soon as it is tall enough to cut, regardless of whether or not it is mature. Nor would he graze a permanent pasture closely from the time the growth begins until it ceases, for he knows that this will result finally in killing it out. And since climate and soil conditions over much of the western grazing lands are less favorable to plant growth than those on the average farm, even greater care must be exercised in utilizing the range crop than is necessary with that on the farm.

The remedy suggested for range deterioration is a system of deferred grazing. Under such a plan an over grazed portion of the range, sufficiently large to supply the forage from the time of seed maturity until the end of the grazing season, is protected from stock until the seed crop has matured.

Upon maturity of the seed crop the forage is grazed during the first season, but not to the extent of injuring seed plants. The same area is protected in the same way during the second and, if necessary, subsequent seasons, or until the new plants have been securely established. When the area has been thoroughly reseeded it can be again grazed early in the season, and a second area, large enough to accommodate the stock from the time of seed ripening to the end of the season, is protected until the forage is mature.

By this method of alternating late grazing from one area to another, weakened vegetation can recover its vitality without the need of having the land closed to grazing the entire year.

We have received a copy of The Rev. Irl R. Hicks Almanac for 1914. It is a most popular and splendid book on storms, Astronomy and Weather. No family, farmer or business man will begrudge the price of this wonderfully valuable and well-known book. Only 35c mailed to Word and Works Publishing Company, 3401 Franklin Ave., St. Louis, Mo., will bring you this fine Almanac, and a sample copy of The Rev. Irl R. Hicks Magazine, Word and Works.

Dietetic Value of Beer
From a German Medical Opinion

The intoxicating action of beer is very much less than that of wine and whiskey; and as it gradually tends to suppress the use of the latter, it accomplishes a high mission in the history of civilization. The intoxicating action of the small quantity of alcohol (in beer) is neutralized by the carbonic acid and the malt extract. Hops in small quantities stimulates the appetite and promotes evacuation, (or acts as a laxative.) Beer is very nutritious when consumed with meat, cheese and bread and it is greatly undervalued as promoting health and robustness. —DR. KIRBACH
