HOW TO HELP THE BABY.

Dr. Hanford, in "Health Talks," tells of the Pink and White Tyrant's Needs.

"The fact that about fifteen infants to every hundred births, die during the first year," says Dr. Hanford in his Health Talks, "and nearly one-half fail to live to the age of five, is significant and lamentable. It speaks sadly of adverse influences, most of which are unquestionably connected with feeding."

"The true and natural food is mother's milk, yet her health is often such that this nourishment is positively a dangerous and causes serious sickness. In such cases the ignorant and reckless use of cow's milk, which differs so widely from mother's milk, is a deplorably destructive of life."

"In all cases where it is not desirable to use the mother's milk, and such cases are many, an infant food that resembles healthy breast milk is the only food that is safe to give to the infant. This should be given with great regularity, once in three hours and once during the night the first six months, gradually diminishing the frequency afterward."

"Of the many artificial foods that are seen on the shelves of our drug stores, I prefer the lactated food. I have long been familiar with its use and am decidedly of the opinion that its general introduction would materially diminish the death rate among the little ones in the summer season."

"This lactated food, prepared from the cream, with wheat barley, to which sugar of milk has been added, so that it is a perfect substitute for mother's milk. No prescription is necessary to obtain it, as most of the druggists in this country have it for sale. A twenty-five cent package makes ten pints of food, so that this great blessing for mothers is not at all expensive."

"Everything in our store will be sold at auction. 134 Monroe street."
