Baltimore, Md., U. S. A.

Woman can sympathize with Yoman.

LYDIA E. PINKHAM'S VEGETABLE COMPOUND.

Is a Positive Cure for all those Painful Complaints and Weaknesses so common to our best female population. It will cure entirely the worst form of Female Complaints, all ovarian troubles, inflammation and irritation, Falling and Displacements, and the consequent Spinal Weakness, and is particularly adapted to the Change of Life. It will dissolve and expel tumors from the uterus in an early stage of development. The tendency to cancerous humors there is checked very speedily by its use. It removes faintness, flatulency, destroys all craving for stimulants, and relieves weakness of the stomach. It cures Bloating, Headaches, Nervous Prostration, General Debility, Sleeplessness, Depression and Indigestion. That feeling of bearing down, causing pain, weight and backache, is always permanently cured by its use. It will at all times, and under all circumstances act in harmony with the laws that govern the female system. For the cure of Kidney Complaints of either sex see this Compound.

LYDIA E. PINKHAM'S VEGETABLE COMPOUND is prepared at 53 and 55 Western Avenue, Lynn, Mass. Price \$1.00 per bottle for 60 cents by mail in the form of pills, all cure diseases of the stomach, on receipt of price, 50 cents per box for 60 cents. Mrs. Pinkham freely answers all letters of inquiry. Send for pamphlet. Address as above. Mention this Paper.

No family should be without **LYDIA E. PINKHAM'S LIVER PILLS**. They cure constipation, biliousness, and torpidity of the liver. 50 cents per box. Sold by all Druggists.

Veterinary Carbolisolve

Cures Collar and Saddle Galls, Scratches, Cuts, Wounds and Old Sores, quicker than any other remedy. It leaves no scum and the hair always comes in its natural color. It will cure diseases of the feet and crown a clean, tough hoof in a short time. Large size (one pound), \$1.00; small size, 50 cents. Sold by all Druggists, who will mail on receipt of price. J. W. COLE & CO., Sole Proprietors, Black River Falls, Wis.

HOLMAN'S PAD CURES Simply Without MEDICINE by Absorption

The Only True Malarial Antidote.

DR. HOLMAN'S PAD is no guess-work remedy—no feeble imitative experiment—no polluted hodge-podge of some other inventor's ideas; it is the original and only genuine curative Pad, the only remedy that has an honestly-acquired right to use the title-word "Pad" in connection with a treatment for chronic diseases of the Stomach, Liver and Spleen.

By a recently perfected improvement Dr. Holman's Pad has greatly increased the scope of the Pad's usefulness, and appreciably augmented its active curative power.

This great improvement gives HOLMAN'S PAD (with its Adjuvants) such complete and unflinching control over the most persistent and unyielding forms of Chronic Disease of the Stomach and Liver, as well as Malarial Blood-Poisoning, as to amply justify the eminent Professor Loomis' high conclusion: "It is NEARLY A UNIVERSAL PANACEA THAN ANYTHING IN MEDICINE!"

The success of HOLMAN'S PADs has inspired imitators who offer Pads similar in form and odor to the genuine HOLMAN PAD. Beware of these HOGS and Imitation Pads, gotten up to sell on the reputation of the GENUINE HOLMAN PAD.

Each Genuine Holman Pad bears the Private Revenue Stamp of the HOLMAN PAD COMPANY with the above Trade-Mark printed in green.

FOR SALE BY ALL DRUGGISTS, Or sent by mail, post-paid on receipt of \$2.00.

HOUSE AND FARM.
Housewives' Scraps.

The lustre of morocco leather is restored by varnishing with white of egg. Old wall paper may be very much improved by simply rubbing it well with a flannel dipped in oatmeal.

The best duster with which to clean carved furniture is a new paintbrush; you can remove absolutely all the dust with it.

An economical housewife will always buy her soap in large quantities, cut each bar in square pieces and store in a dry place. It lasts better after shrinking.

Mix a little carbonate of soda in the water in which flowers are immersed, and it will preserve them for a fortnight. Common saltpetre is also a very good preservative.

The yellow stain made by the oil on sewing machines can be removed if, before washing in soap, the spots be rubbed carefully with a bit of cloth wet with ammonia.

Flies are said soon to disappear from a room containing a plate of the following mixture: Half a teaspoonful of black pepper in powder, one of brown sugar and one of cream mixed together.

Simple and tasteful table-covers for bedrooms may be made of pale blue canton flannel trimmed with antique lace, or with velvet ribbon feather-stitched on, and finished with fringe made of blue split zephyr or Shetland wool.

Take one ounce of spermaceti, and one ounce of white wax, melt and run into a thin cake on a plate. A piece the size of a quarter dollar added to a quart of prepared starch gives a beautiful lustre to the clothes and prevents the iron sticking.

Stove lustre, when mixed with turpentine and applied in the usual manner, is blacker and more glossy than when mixed with any other liquid, and the turpentine also prevents rust. If stoves are rubbed with kerosene when put away in the spring they will not rust.

An ingenious mother, who has long been bothered by the fastidiousness of her children at table, has at last discovered a way of circumventing them. She places what she wants each child to eat before its neighbor at table, and of course each cries for what the other has, and the ends of justice are promoted.

The poets, the truly great poets, have a mighty influence on the lives of even the humbler classes. Shakespeare, for instance, touches all grades of experience and lights the labors of mental servitude. Where can you find a better receipt, in nobler language, for the proper preparation of a beefsteak than he gives in the immortal words:

If when 'twere done, 'twere well done,
Then 'twere well it were done quickly.

A "mother's loaf" of bread, the work of careful and sympathetic hands is far better than any to be purchased at the baker's. Real family cooking is also individualized cooking. Something in every dish thus prepared; some peculiar flavor is imparted to it by the maker. All people of sensitive tastes can testify to that certain monotony of flavor which at last prevails the best hotel or boarding house cookery. It is there a matter of necessity that a mechanical routine in the preparation of food must be maintained.

One of the wealthy ladies who occupies a cottage at one of the Eastern watering places had a box made for her jewelry in imitation of a Bible. While absent one day some one entered her house and carried off her silverware, but her box of jewelry was undisturbed. Even a robber won't steal a Bible.

A Berlin millinery establishment has come to grief in a queer way. The proprietor sold to the nearest grocer his old order books, oblivious of the various notes on customers they contained, such as "Countess—, exacting, stingy, but a good buyer; Countess N., dress to be well padded in front; Baroness L., care must be taken to show off her arm, which she piques herself on," &c. Somebody got hold of these and made mischief.

Personal Items.

A. D. Jessup, whose death is announced in London, always spent his summers at Newport, R. I. He was the gentleman who purchased the villa owned by the Peruvian minister, Francis L. Barrota, for \$100,000, and who in less than one year disposed of it to John Jacob Astor of New York for \$201,000. His daughter was married at Newport about a year ago to an officer of the English army.

The will of John S. Cobb, late of Weymouth, Mass., gives to the American Seaman's Friend Society \$3,000; to the American Board of Commissioners for Foreign Missions, \$5,000; American Home Mission Society, \$2,000; American Tract Society, \$2,000; to the Union Congregational Society of South Weymouth, all real estate owned by him and situated outside of that town, together with considerable personal property.

A rather notable student finished his course at the Yale Law School last week, graduating third in his class. This was Peter Doyle, ex-secretary of the Yale Law School. Mr. Doyle is now forty-five years old and has been a successful lawyer and politician in Wisconsin. Being conscious of some defects in his legal education he determined to remedy them at an age when most men would not feel like "going to school." He worked hard while at the Law School, and was popular with his teachers and professors, and one at least of the latter expects to see him a member of congress.

It appears that Silas M. Waite, now serving a term of imprisonment for defalcation while president of the Brattleboro (Vt.) bank, actually contributed \$100,000 of his own money for dividends to the stockholders. Although the concern was bankrupt, and the stockholders were not allowed to receive their dividends, and paid them out of his own pocket, his motive is not clear, but it is certain that his falsity impoverished many depositors. He is about to sue the stockholders for a return of the dividend money.

The Rev. John Canning, D. D., who has just died, and who for nearly fifty years has preached to a wealthy, fashionable, and intellectual congregation in the Scotch church in Crown Court, in the center of London, was in many respects a remarkable man. Very eloquent and highly-finished in style, he had the Scotchman's love of argument and controversy, with very decided views on prophecy, the papacy, and the end of the world, which furnished his usual themes. He was the successor of the famous Edward Irving, and had been among the best known and most influential clergymen of the past two generations. It has long been customary for Americans visiting London to repair to his chapel in Covent Garden, and hear him as one of the lions of the metropolis of the same rank with Spurgeon, Punshon and Martineau. He was very earnest in a quiet way, exceedingly interesting, and often poetical.

Cooking Meat.

Dr. Leids of Philadelphia, one of the greatest authorities on all subjects relating to parasitic entozoa, says that with meats properly cooked there can be no danger from trichinae. But he also says that he is uncertain how far salting and smoking meats will secure complete exemption from parasites in all cases in which the meat has had an opportunity of containing parasites, they were always dead. Through cooking is doubtless a certain preventive against injury from all entozoa of a similar nature to the trichinae.

The Preservation of Eggs.
From the Scientific American.

The question, "How can eggs be preserved for market?" just now engages the attention of many of our readers. The following will prove of timely interest to many.

In the common "liming" process a tight barrel is half filled with cold water, in which are stirred slaked lime and salt in the proportion of about one-half pound for every pail or bucket of water. Some dealers use no salt, and others use a small quantity of nitre—one quarter pound to the half barrel of pickle. Into this the eggs which must be perfectly fresh and sound, are let down with a dish, when they settle to the bottom, small and down. The eggs displace the liquid, so that when the barrel is full of eggs it is also full of the pickle. Eggs thus pickled, if kept in a cool place, will ordinarily keep good for several months. Long storage in this liquid, however, is apt to make the shells brittle and impart a limy taste to the contents. This may be avoided in great measure by omitting the eggs all over with lard before putting in the pickle. Eggs thus prepared are said to keep perfectly for six months or more when stored in a cool cellar.

A much better method of storing eggs is the following: Having selected perfectly fresh eggs, put them, a dozen or more at a time, into a small willow basket, and immerse this for five seconds in boiling water containing about five pounds of common brown sugar per gallon of water. Place the eggs immediately after on trays to dry. The scalding water causes the formation of a thin skin of hard albumen next the inner surface of the shell, the sugar effectually closing all the pores of the latter.

The cool eggs are then packed, small end down, in an intimate mixture of one measure of good charcoal, finely powdered, and two measures of dry bran. Eggs thus stored have been found perfectly fresh and unaltered after six months.

French authority gives the following: Mix four ounces of clear beeswax in a porcelain dish over a gentle fire and stir in eight ounces of olive oil. Let the resulting solution of wax and oil cool somewhat, then dip the fresh eggs one by one into it so as to coat every part of the shell. A momentary dip is sufficient, all excess of the mixture being wiped off with a cotton cloth. The oil is absorbed in the shell, the wax hermetically closing all the pores. It is claimed that eggs thus treated and packed away in powdered charcoal in a cool place have been found after two years as fresh and palatable as when newly laid.

Paraffine, which melts to a thin liquid at

a temperature below the boiling of water, and has the advantage of being odorless, tasteless, and cheap, can be advantageously substituted for the wax and oil, and used in a similar manner.

Thus coated and put into the lime pickle the eggs may be safely stored for many months; in charcoal, under favorable circumstances, for a year or more.

Dry salt is frequently recommended as a good preservative packing for stored eggs, but practical experience has shown that salt alone is but little better than bran, especially if stored in a damp place or exposed to damp air.

A mixture of eight measures of bran with one of powdered quicklime makes an excellent packing for eggs in transportation. Water glass—silicate of soda—has recently been used in Germany for rendering the shells of eggs non-porous. A small quantity of the clear syrupy solution is smeared over the entire surface of the shell. On drying, a thin, hard, glassy film remains, which serves as an admirable protection and substitute for wax, oil, gums, &c. Eggs thus coated and stored in charcoal powder or a mixture of charcoal and bran would keep a very long time.

In storing eggs in charcoal the latter should be fresh and perfectly dry. If the eggs are not stored under any circumstances. A broken egg stored with sound ones will sometimes endanger the whole lot. In packing, the small end of the egg should be placed downward; in charcoal or other material, it should be packed so that the shell of one egg does not touch that of another, the interspaces being filled with the powder.

Under all circumstances stored eggs should be kept in as cool a place as possible. Frequent change of temperature must be avoided.

Warm Milk as a Beverage.

From the Medical Record.

Milk heated to about 100 degrees F. loses for the time a degree of its sweetness and its density. No one who, fatigued by over-exertion of body or mind, has ever experienced the reviving influence of a tumbler of this beverage, heated as hot as it can be sipped, will willingly forego a resort to it because of its having been rendered inferior to the palatable. The promptness with which its cordial influence is felt is indeed surprising. Some portion of it seems to be digested and appropriated almost immediately; and many who now fancy they need alcoholic stimulants when exhausted by fatigue, will find in this simple drink an equivalent that shall be abundantly satisfying, and far more enduring in its effects.

UP IN A BALLOON.

The First Particulars of the Expedition from Minneapolis to New York City—Interesting Letter from Prof. Samuel A. King, the World-Famous Aeronaut—Seventeen Hundred Miles Whirled Through Space in a Monster New Air-Ship.

THE LAST SENSATION.
From the Minneapolis Tribune, July 20.

For several years past the darling wish of every noted aeronaut has been to make the journey from New York to London in a balloon, and two years ago and last year meetings were held in New York city looking toward extending help to Prof. Lowe to make the trip. The idea was to utilize the so-called western trade currents by starting from New York in September, and many scientists declare it possible to reach the other side in safety through the aid of these winds. For some reason unknown or forgotten by us, the scheme was abandoned. About a year ago, Prof. Wise, with whom the writer made two unimportant ascensions, constructed an air-ship in St. Louis in which he fondly hoped to cross the broad ocean. He made a preliminary trip from St. Louis, taking with him three or four prominent citizens of that place, and from that fated day to the present time no tidings have been received from the balloon or the daring aeronaut, not even a rope or strip of silk having been seen to tell the tale. An opinion has been given that the balloon, which was filled with hydrogen gas is still wandering through space with its freight of dead men.

THE MINNEAPOLIS SENSATION.

In casting about for a supreme attraction for the great Minneapolis fair beginning Monday, September 5, Col. W. S. King decided upon securing the first ascension and a long voyage across the ocean, under the learned direction of Prof. Samuel A. King, the greatest and most successful aeronaut now living. The papers eastward west have been teeming with preliminary articles on the thrilling voyage, and from a mere theory and dream it has become a reality. The first voyage in the air ship will take place Wednesday, September 27, the balloon leaving the Minneapolis grounds at 4 o'clock p. m., bound for New York. If the voyage is made safely Prof. King will start from New York for London at the height of the September trade winds. As the great enterprise is to have birth in Minneapolis the Tribune on July 7 made application, through one of its city editors, for passage to New York, and on Wednesday following the interesting letter and grant of the application was received:

LETTER FROM PROF. KING.
PHILADELPHIA, July 17.—CHARLES M. FAYE, Esq.—Dear Sir: Your favor of the 8th instant came to hand in due season but I have found it impossible to answer sooner. My whole time is occupied in preparing for the grand voyage from Minneapolis in September. I am making an air ship of unusually large proportions, and new principles are involved in its construction so that, though I have plenty of help my own attention must be constantly given to it. You would like to know something of the ideas which govern me in the proposed grand continental voyage, and I will give them. Dr. Winslip—the famous storm man—once said to me, "If it is possible for a human being to fly with the aid of artificial wings, I am prepared better than any one else to accomplish the feat," and though he never made the attempt to fly, the strength left no doubt of the correctness of his assertion.

Now, it is asserted by some that a balloon is but a useless toy, fit only for the amusement of the crowd. I object to this! I object to the notion that because the aerial globe cannot be governed like a railroad car or steamboat and made to carry its freight from one given point to another, that therefore it should be considered as good for nothing. It is true the aeronaut must be content to float upon the cloud-billows, drifting whithersoever the wind listeth; but, what of that? Instead of being an objection, it has just this advantage that no other known method can accomplish the same thing. That the balloon has its own particular province with regard to scientific research there can be no doubt and in this it is most valuable—it can be made to lie regarding the course of the wind waiting it's earth or sea, and it is the study of these currents of air, high and low, that is so all important to meterology.

All great efforts require preparation. I believe it is possible for any one to dominate the truth of the New York Herald's theory of ocean storm-currents by crossing in them from America to Europe. I believe that one, yet I feel the need of such experience as I have not yet been able to obtain—a voyage over land which shall partake of many features of the ocean voyage itself. I count upon the coming one (from Minneapolis to New York) to be the most extraordinary of air voyaging, and I hope thereby to demonstrate the entire feasibility of the other across the Atlantic.

Col. W. S. King has promised to enable me to inflate at immense expense by hydrogen gas so that with the enormous crowd that shall be able to leave terra firma with the greatest number of persons and the largest quantity of ballast that ever ascended into the air. This at the start, after the first day my party will be reduced to a minimum; all parties ascending with me must bear this in mind and accept cordially such rules as I may find necessary to adopt.

Col. King has written me recommending you very highly. So I take it for granted, with that you say yourself, that you will very kindly, if you shall be pleased to hear further from you, and will endeavor to answer any inquiries you may wish to make. Yours truly,
SAMUEL A. KING.
SEVENTEEN HUNDRED MILES THROUGH AIR.

That Prof. King will be able to complete his journey successfully and safely there can be no reasonable doubt under ordinary circumstances. To be sure, 73 per cent. of the balloons leaving the earth are wrecked or never heard from again, but with the approved apparatus now building it is believed the chances are reduced to an even per cent. for and against safe landing. To no more learned, practical and brave a gentleman could the great task be committed than to Prof. King. He has made more than 260 ascensions safely, and this great feat of going from Minneapolis to New York and thence across the Atlantic is to the cap-sure of famed achievement.

The party going up with Prof. King will consist of five persons, all newspapermen, from New York, Philadelphia, Boston, Chicago and Minneapolis. The Tribune sending Charles M. Faye, of the city department, as its representative.

At first it was arranged for 100,000 cubic feet of coal gas from the Minneapolis Gas Works to inflate the balloon, but this was found inadequate, as it possessed a buoyancy of only 13 pounds to the 1,600 cubic feet, or 1,300 pounds for the entire 100,000 cubic feet. As a substitute, hydrogen gas will be used, which has a buoyancy six times greater than coal gas—the relative buoyancy being: coal gas, 2.1-2; hydrogen, 15. So it is learned that 100,000 feet of pure hydrogen gas will take up 7,800 pounds. The proportion of buoyancy is given on a basis of atmospheric air. Special gas works must be constructed on the fair grounds in which to make the gas, and men must come from New York city to build the works, the expense of which will be thousands of dol-

"Cutting a Swath" in Journalism.
From the New Haven Register.

Young Fitzlamode has just entered journalistic life, and is going to "cut a swath." He believes in putting in a good day at the star, and prides himself on the mellifluousness of his work. He sharpened up a couple of pencils at both ends this morning and began:

"We regret to inform our readers that the estimable Miss Jones, of Jonesboro, daughter of Congressman Jones, and granddaughter of the well known founder of the village of Jonesboro, has met with a fearful accident, and she was driving along the boulevard, at the speed of the wind, a horse, a half brother of Maud S. and full sister of St. Julien, became suddenly startled by the uprising of a covey of partridges which are unusually numerous in that section this season, and promise a great deal of fun for the sportsmen who are in the law, and as they circled the frightened steed tore down the avenue like mad until stopped by the gallant hand of Officer 73 of the Ninth ward. Her injuries were a contusion of the ankle which did not amount to a fracture, and the unfortunate girl was carried home to her grief-stricken parents and sympathizing friends.

The city editor at this point was anxious for "copy," and glancing at what rapidly crumbled in his hand, remarking, "Fitzzy, you have struck the realm of fancy soil! This department is the domain of fact." He then scribbled:

"The daughter of Congressman Jones was run away with by a spirited horse on the avenue yesterday afternoon. Injuries nominal."

Schlegel: Literature is the immortality of speech.

ars. Col. King is bound to make the balloon ascension one of the most sensational features of the fair, and it is expected at least 100,000 people will witness the departure from earth of the aerial monster.

[La Fayette (Ind.) Sunday Times.]

Our City Druggists report an immense sale of St. Jacobs Oil, saying the demand is based upon the popularity of its success. Where-ever it has been used, it has proved its value a thousand fold, and receives its best encomiums from those who have tried it.

Several Texans are in jail at Leadville. We have always observed that no matter where Texans may be, they move in the very best society the place has.

[Albany, (N. Y.) Daily Press and Knickerbocker.]

Abandoned.

We perceive by one of our Massachusetts exchanges that Dr. Lorenzo Waite, of Westfield, an eminent physician of Berkshire Co., strongly indorses St. Jacobs Oil. With it he cured a case of Sciatica that resisted all regular professional treatment, and that had in fact been abandoned as incurable.

The lawyers who contested the forged Whitaker will, at Philadelphia, have brought in bills aggregating \$102,000. Fortunately, the estate is nearly valuable enough to pay them.

"My Back Aches So."

I feel miserable," said a hard-working man. The doctor questioned him and found that he had been habitually costive for years, and that his kidneys were disordered and his system deranged. Kiney-Wort was recommended and faithfully taken and in a short time every trouble was removed. The cleansing and tonic power of this medicine on the bowels and Kidneys is wonderful.—Congressionalist.

A Brooklyn sensation was the wedding of two deaf mutes. Persons who made any allusion to unseparable happiness were immediately bounced out of the church and served their right.

Troublesome Children.

That are always wetting their beds ought not to be scolded and punished for what they cannot help. They need a medicine having a tonic effect on the kidneys and the urinary organs. Such a medicine is Kiney-Wort. It has specific action. Do not fail to get it for them.—Exchange.

With the death of his son, Sir Percy Shelley, the poet, will, in common with Byron, have no descendant of his name.

This is the season for Bowel Complaints; unripe fruit and exposure produce them, and Perry Davis's Pain-Killer cures them. It acts with wonderful rapidity, and is perfectly harmless. No family should be without it. For internal and external uses it has no equal.

Prof. Tice, of St. Louis, who had a wide reputation for his rapidly acquiring benefactor Venner came into favor, is very ill.

Mrs. Lydia E. Pinkham, 253 Western avenue, Lynn, Mass., has rapidly acquiring an enviable reputation for the surprising cures which daily result from the use of her Vegetable Compound in all female diseases. Send for her pamphlets.

It takes eight hundred full blown roses to make a teaspoonful of perfume, while ten cents worth of cooked onions will scent a whole neighborhood.

Dr. Holman's Pad, composed of harmless tonic and antiseptic vegetable ingredients, designed by Nature to act by absorption, in harmony with Nature's Laws, is the only true, rational and invariably successful treatment for Malaria.

AN ENORMOUS TRAFFIC Pittsburgh boasts that 849,746 bottles of CARBOLINE have been sold within the last six months. This shows that the great army of baldheads will soon be reduced to a corporal's guard.

"Sellers' Liver Pills" have been the standard remedy for many a liver complaint, costiveness, or for fifty years.

"Female complaints" are the result of impure blood. Use "Dr. Lindsay's Blood Searcher. Sure cure.

"Rheumatism"

New, quick, complete cure 4 days, urinary affections, smartings, frequent or difficult urination, kidney diseases. \$1. Druggists. Noyes Bros. & Cutler, St. Paul.

A most remarkable cure for dyspepsia "Wells' Health Renewer." The greatest tonic, best bilious and Liver Remedy known. \$1. Druggists. Noyes Bros. & Cutler, St. Paul.

Teedles Alw. y. Kept a Coffin in his house. Had he lived now he would have kept Warner's Safe Kidney and Liver cure.

For Dyspepsia—Indigestion, Depression of Spirits and General Debility, in their various forms, as a preventive against Fever and Ague, and other Intermittent Fevers, the "Ferro-Chloride of Iron and Quinine," made by Caswell, Hazard & Co. of New York, and sold by all druggists, is the only tonic; and for patients recovering from Fever or other sickness, it has no equal.

Toomb's Fee and What He Did For It.
From the Augusta (Ga.) Chronicle.

General Toombs was in Atlanta attending to business one day when he was called by a delay. He says he has given up law practice, but he does not want, as he is "ashamed of the facility with which he can make money." To illustrate some of these oddities, he told us that a widow came to him recently and asked advice concerning a son who was on bail and charged with some serious felony. Toombs put her off; said he would not say anything to do with the matter; was not practicing law, etc. She in-

LIEBIG'S CORN REMOVER!

For complete removal of Hard or Soft Corns, Bunions, Callouses, Warts and Moles. Endorsed by Gen. R. W. Johnson, U. S. A., L. Fletcher & Co., Clark & Linton, T. S. King, of Pioneer Printing.
