PRINCETON - - - MINNESOTA

The Famous CHEVROLET Four-Ninety

The car has the following exclusive features, and differs in many respects from all other automobiles, irrespective of price:

It has shock absorbing, duplex front springs (patent pending) and is the easiest riding car for its size in the world.

It has a self-lubricating clutch collar, eliminating clutch collar troubles, such as friction, heating and wear (patent pending).

It has the rear wheel bearing carried on the wheel hub, just the reverse of the ordinary construction, the bearing being three times the size used in ordinary axles. This extra large bearing carried in the axle housing takes the load—the axle shaft carries no load.

It has a compound steering gear, composed of spur gears and sector, attached to body, simplest and safest ever invented. It is adjustable for wear. (Patent pending).

It has a unit power plant carrying transmission on open brackets (patent pending) which gives accessibility to clutch and allows removal of transmission, if necessary, in twenty minutes.

It has a special brake arrangement (patent pending), which insures powerful, quick acting and smooth brakes. Emergency brake internal expanding. Service brake external contracting.

It does not have a single hinge joint to squeak or a spring shackle to rattle and only six grease cups will be found on the entire car.

The Model "FOUR-NINETY," price \$490, is equipped with electric lighting and starting system at \$60 extra. When so equipped, electric lamps with dimming attachment and electric tail lamp are used.

THE MOTOR—Is of the celebrated valve-in-head type. It is different from ordinary valve-in-head motors. It has a detachable head which contains all the valve mechanism that can be easily disconnected, permitting the grinding of valves and removal of carbon at the bench. It is different from ordinary valve-in-head motors in design, balance, proportions and accuracy of timing, resulting in a motor which produces more power for its size and weight than any other motor in the world. It is different from the ordinary valve-in-head motor in that it has a very much smaller cylinder bore; but with proper port areas, perfect vaporizing of fuel, and our peculiar method of vacuum exhaust, we obtain an average of better than twenty-five miles per gallon of gasoline. It is different from the ordinary valve-in-head motor in that it has the utmost accessibility to all parts and is very simple.

Call and see a demonstration of this Wonderful Car and get information as to its superior equipment.

IT WILL BE A PLEASURE TO SHOW YOU.
