Pure Water a Necessity

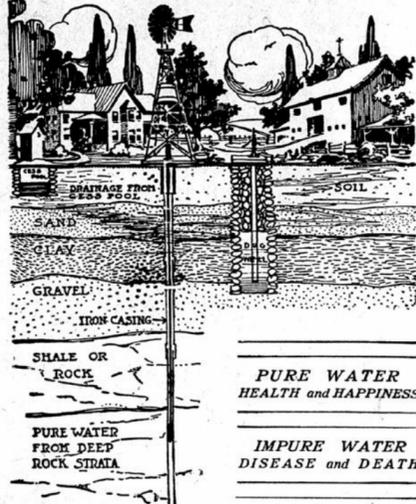

No man can afford to gamble on the water used from a dug well. It may contain typhoid or other disease germs for several years and not hurt you or your family; but tomorrow, next week or next month your system may be just right to propagate those germs and you have to fight for your life with great odds against you.

The human system contains a large percentage of water. It is estimated that 87 percent of typhoid is caused by impure water, 5 percent from milk--incidentally impure stock water. Milk contains mostly water, so it is just as important to have a pure water supply for your stock.

Every man owes to his family and himself the protection which a pure water supply affords. Do not put it off until tomorrow as you may regret it all your life.

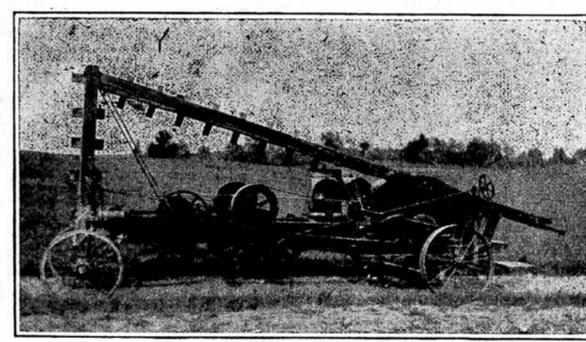

PURE WATER

IS ONE OF THE PRIMARY NEEDS OF HUMAN LIFE AND IS NO LESS ESSENTIAL THAN AIR OR FOOD

Study this picture--A printed volume could not say more. Statistics show that 87 percent of all typhoid is due to impure water.

The Drilled Well the Only Sure Sanitary Water Supply

You have undoubtedly figured on having a well drilled this fall. Why not let that well contract now, and have your job done before the fall rush instead of taking chances on the old well which may run dry this winter, when you most need

the water for your stock. Hauling water during winter is a very unpleasant job. A drilled well will prove a profitable investment from the start giving yourself and family, also your stock the protection which a pure water supply affords. Will supply an abundant amount of clear sparkling water through dry seasons as it is not dependent on wet weather ooze and surface seepage.

Just phone or write us and we will be glad to have the opportunity to call on you and talk the matter over without the least obligation to yourself. We are able to give you prompt service and make you a better price per foot by letting your well job now instead of letting it go until the snow flies.
