

# HIGH COST OF SLEEPING CARS

Palatial Home Could be Built for Cost of One Observation Car on Chicago, Milwaukee and St. Paul.

## ARE \$30,000 STRUCTURES

Nine New Cars Being Put Into Service on Road—Finest Materials Are Used Throughout.

The new through observation sleeping car line inaugurated by the Chicago, Milwaukee & St. Paul railway between Sioux City, Mitchell, Aberdeen and the Pacific coast provides daily service leaving Sioux City at 7 p. m., reaching Mitchell shortly after midnight, and arriving at Aberdeen to connect with the Columbian, the "Milwaukee's" through all steel transcontinental train.

It would take a pretty evenly poised globe trotter not to gasp if a hotel were pointed out with a 14 foot frontage, 20 feet height and 72 feet depth that would cost \$30,000. Yet this broadly outlines the dimensions and the value of each one of the nine observation sleeping cars that the Chicago, Milwaukee & St. Paul railway is putting in this new service.

Unless one is in the car building business, the traveler has but little conception of the thousands of items used in constructing such a piece of modern traveling machinery.

To begin with, the steel frame of a modern car is fitted and welded together more substantially in proportion to its size than the steel work of our highest skyscrapers.

The lighting and wiring plans are all installed by the most skilled mechanics. The intricacies that make it possible to shed that brilliancy of light throughout the car and even to the privacy of the berth, are taken from a wiring system that must lend itself to both dry battery and dynamo power.

The fans, heaters and curling irons are also connected in some way with the maze of wiring that the designer carries concealed perhaps above the roof, under the floor or along the sides of the car.

For the interiors, the most highly polished mahoganies, pleced and set by cabinet makers who could design and execute creations in furniture which would ornament the finest parlors or most exclusive hotels.

The umbrella rack is not forgotten; neither is the hook for the razor strap. No accessory, in fact, that can be calculated to add to one's comfort is overlooked.

There are sleeping sections, compartments, library, writing desks, lounging parlor and roomy observation platform.

One gets a much better conception of what the expense means by contemplating what it is possible to do with \$30,000 used in the building and furnishing of a home—yet this represents the amount of money spent by the Chicago, Milwaukee & St. Paul railway for each one of the nine new sleeping cars they are putting into this new service to the Pacific north coast.

That America leads the world in high class transportation facilities is conceded, and while the traveling public receive and demand fast-flying palaces of this kind, there is little room to doubt that this country will remain pre-eminent so far as transportation is concerned.

## WEDDING SOONER THAN EXPECTED

(Continued from page 1.)

again cheers rang about them. Before the special pulled out of the station the president shook hands with a number of friends who had come down to see him off and thanked the police officers who attended him.

As the train pulled away, the president and his family went out on the rear platform and waved a cheery farewell to the crowds. In one hand he held the baseball which he had thrown out on the diamond to start the game today. This had been presented to him at the conclusion of the game by Manager Moran of the Phillies.

The president gave it to Mrs. Galt as a little souvenir of the auspicious occasion. The party fired after the day's festivities were over, were served tea in the president's private car by Mrs. Galt.

In the Hall of Fame. HUNTINGTON, W. Va., Oct. 9.—If Mrs. Norman Galt will remember little Freddie Updyke when she passed out those invitations to her strictly private wedding to President Wilson, it will be a fair swap for those red apples Freddie used to smuggle into Edith Bolling's desk at the White House, Va., school, back in the days when F. J. Updyke and the president's fiancée were just kids and sweethearts. Updyke claimed a little niche in the Hall of Fame tonight. He was

## Piles Cured at Home by New Absorption Method

If you suffer from bleeding, itching, blind or protruding piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment for trial, with references from your own locality if requested. Users report immediate relief and speedy cures. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P, Notre Dame, Ind.

Mrs. Galt's first sweetheart, he said, and his friends who knew both Updyke and the soon-to-be first lady of the land, he met his claim.

## WHAT THE WAR MOVES MEAN

(Continued from page 1.)

burg's army continues to try its strength against the Dvina line, but there is little doubt this marks the final effort of the invaders for the time being.

The campaign against Petrograd has apparently been abandoned and Von Hindenburg can seize the Dvina line, he may be expected to venture no further. With Von Hindenburg's operations now becoming the only offensive that must be seriously resisted, the chances should favor Russia's retention of all the Dvina positions between Riga and Dvina.

A renewed French offensive in Champagne this week pierced the German second line about midway between the two extremes of the active Champagne battle front. The victory, however, has only local value, and does not imperil the German line as a whole. In Artois, the Germans have made strong efforts to recover the ground recently lost at Loos. Only meagre results have followed a large loss of life. The new Artois positions are probably well constructed by the French and British and the German counter attacks are being delivered too late.

## THE WAR IN MEXICO TODAY

(Continued from page 1.)

ment will include financial assistance. He has promised to call general elections as soon as practicable and establish an actual instead of de facto government.

The presence of Carranza in Mexico City is not an essential condition to his recognition, Secretary Lansing stated.

European and other foreign governments which have deferred to this government's wishes in not recognizing any Mexico faction, are expected to follow the Pan-American policy.

The Southern Border. WASHINGTON, Oct. 9.—Guatemala is maintaining a large patrol on the southern Mexican border, the state department announced tonight. Ostensibly the Guatemalians are stationed to prevent raids by Mexicans. So far no armed Mexicans are said to have crossed.

The position of Guatemala's soldiers was regarded significant in some quarters—because of reports that President Carranza of Guatemala and General Carranza had strained relations.

Villa Will Resist. EL PASO, Texas, Oct. 9.—General Villa will fight against Carranza's recognition until the last, "as long as his principles are threatening the poor people of Mexico," declared Villa at Juarez today.

"I am surprised that the Pan-American conference should think of recognizing Carranza," continued Villa. "He controls only where he has troops. If he is recognized, anarchy will follow for Carranza represents the same Huerta faction."

Villa proposed that a form of coalition government should be established in Mexico of half the government offices filled by his adherents and half by Carranza's, with a neutral provisional presidency until a general election can be held.

No Famine in City. HOUSTON, Texas, Oct. 9.—The food situation in Mexico is well in hand, according to a cablegram to the Carranza consul at Galveston which says among other things that forty-six free food stations are in operation; that a surplus is left at every station each night; that essentials are sold at bed-rock prices at fifty-six other stations; that thousands are fed daily in eight great public dining rooms, that four new asylums have been established for women and children in need of medical attention; and that the Carranza government in furtherance of its plan of spending thousands daily, offers work to everybody so inclined.

He Will Need It. [United Press Leased Wire Service.] MONTEREY, Calif., Oct. 9.—Eddie Burns, Philly catcher, is earning some wedding money in the world's series. Miss Viola LaPorte, of this city, today blushingly admitted that she and Eddie were engaged to be married immediately after the world series ended.

Will Box Fifteen Rounds. [United Press Leased Wire Service.] DALLAS, Texas, Oct. 9.—Eddie Coulon, of New Orleans and Bobby Burns, of Dallas, bantam, will box fifteen rounds before the Keo Kau A. C. in October 15. It was announced tonight. They will make 110 pounds ring-side. Burns will meet Kid Herman at New Orleans, October 29.

Made-in-America Doll Heads. The United States geological survey has informed the bureau of foreign and domestic commerce that the manufacture of porcelain doll heads has been established in Philadelphia. This, the survey remarks, is a new industry for the United States.

Heretofore the American demand for such heads has been met from abroad (chiefly from Germany). The exact value of these importations, however, is not shown by official records, the heads being included with statistics for dolls. In the fiscal year 1915 imports of "dolls and parts of" into the United States amounted to \$1,698,131, against a total of \$1,816,496 during 1914, \$1,563,184 in 1913, and \$1,422,292 in 1912.

# Good Reason Why 'Freshments Weren't Enjoyed at the Party

Perhaps, to begin with, it would be just as well to warn you that this is going to be a story about real boys, so that if you don't like boys you won't waste your time reading this.

The man next door was quite enthusiastic over his two rows of egg plants. He was proud of his garden so far as this commodity was concerned, and he spent much time in cultivating the plants. The day of the party they were quite full of fruit, all purple and shiny and most inviting to look at.

The party was at Jack's house—Jack isn't his real name, but it will do as well as any. There were just a few of the boys of the neighborhood invited to this party. During the afternoon the hours which are so enjoyably spent—began to drag a bit, and Jack and his particular chum, John—whose name really isn't John at all—looked for new fields and worlds to conquer. Naturally shiny purple egg plants attracted their eyes. Led by the little witches of mischief, they invaded the egg plant patch of the man next door, and one by one the fruit was plucked and was being used for a game of ball.

And then Jack's mother saw what had happened. The party very suddenly

was disbanded, and the few little guests were sent to their homes. Jack was bundled into the house and duly punished and apologies and expressions of regret conveyed to the man next door.

John's bedtime is close to that of the chickens anyway, and as he had been dissipating that afternoon at the party, he was put to bed a wee mite earlier. Some little time later he commenced to feel the pangs of hunger and raised his voice in protest.

"Why John, surely you aren't hungry after all the refreshments you had at the party," was his mother's answer.

"They wasn't any 'freshments 'tall at 'e party," came the sorrowful response. "We was all bad and got sended home."

Whereat there followed explanations in detail and upon confirmation over the telephone from Jack's mother of the occurrences of the day, Jack's punishment was repeated in duplicate.

And that's why two small boys look rather sober at the sound of the word "party," or the suggestion of party "freshments, and purple shiny things in grocery stores have no further enchantment.

# Here Are the Latest Style Suggestions For the Fall

[From the Dry Goods Economist.]

Practical and Simple Styles—This tendency is apparent in all lines. In women's garments it brings into special prominence the tailored cut and finish, and even the more elaborate creations have an air of severity and plainness.

Silhouette—The figure changes are slight, with a definite tendency toward the high collar, narrow shoulder, set-in sleeve and defined waist curve.

Waistline—At the normal point or slightly below it.

Width of Skirt—The full skirt will continue, but will not be carried to extremes. Conservative widths are from 2 to 2 1/2 yards in suits and from 2 1/2 to 3 1/2 yards in dresses, with greater fullness for all novelty effects.

Other Skirt Features—The skirts of suits and tailored dresses are mostly in modified circular, flare or pleated effect. In many cases, pleats are introduced at the sides. Pockets and belts are still favored. Skirts of dressy frocks are sometimes in draped effect, and a few have a very long tunic with under-petticoat of different material.

Sleeve Lengths—Practically all of the street suits and wraps and day dresses have long sleeves. Close fitting effects lead, but there are novelty forms showing considerable fullness, introduced in various ways.

Dress Bodices—Closer fitting lines, with a curve accentuated under the bust, are a leading feature. The backs are straight and the hips only moderately emphasized. In the low waisted dresses the bodice shows straighter lines, although there is a slight suggestion of the natural figure line.

Separate Waists—The dressy blouses match the suit in color and are made of chiffon, silk and Georgette crepe, with crepe de chine in flesh color and in white for the more practical types. For these semi-tailored finish is preferred. The sleeves are mostly long and the collars are either high or snug fitting or flat.

Neck Finishes—In suits, coats, dress bodices and blouses the collars are mostly high and close fitting. A few open in the front. Many suits and coats have collars which can

be worn either high or low. In waists and dresses this idea is sometimes carried out, but the strictly high or the low lines are preferred.

Suit Coats—Various types and lengths prevail. Those reaching the fingertips or slightly below dominate in the lines. A few redingotes are also included in the showings. Belts are used to some extent. Flare effects are also in evidence. The strong tendency is in favor of Russian blouses. A number of coats are in sheath effects, others in tailored lines.

Separate Coats—The tendency is strongly in favor of coats in seven-eighth length or covering the dress. Many are made in flare effects, and this is often accentuated by trimmings at the bottom. The Russian line is also in evidence.

Children's Coats—Among the notable features of children's coats are the Russian effects, the flare, the belts, high collars and novel pocket arrangements. Simple designs are largely favored for little folks, as well as for grownups.

Children's Dresses—Tailored and demi-tailored styles in children's dresses are being shown for morning and afternoon wear. Middle, regulation, sailors, Norfolk and Russian effects largely predominate in the fall lines.

Petticoats—The new models are of conservative width—2 to 2 1/2 yards. A few extreme models for evening wear show greater fullness. Leading materials are taffeta, satin and messaline. Colors are subdued.

Lingerie—Extremely simple in finish and made of the finer quality fabrics is the new underwear. There is increasing fullness in the skirt ruffles and flounces.

Brassiers—The vogue of the rounded figure contour makes a shapely brassiere essential. Greater distinction is made between the styles for the slender, the medium and the stout. Flexible boning is used for stout women's models.

Corsets—The present modes call for conservative lines. The return of the normal corset is assured, as the prevailing fashions demand a shapely figure. Important notes are the 4 to 5 inch bust, the moderate

curve at the side fronts, the slight spring at the hips, the medium length skirt and the use of more bones.

Colors—Sombre hues will have the largest adoption. Dutch, navy and brown's wing blue, tete de negre, taupe, mouse and olive, bottle and myrtle greens are the leading colors for street wear. For evening wear standard shades, rather than eccentric colors, will have the call.

Fabrics—The weaves are adapted to the expanding vogue of full skirts. In silks ribbed weaves are gaining, but taffeta is retained. Serges, poplins, broadcloths, velours and checks are the five favorites in dress goods. Fancy coating mixtures are retained. Velvet, velveteens, cords and fur plushes are included in all advance orders.

Women's Neckwear—Lace and net combinations are strongly featured. The style range is from semi-rolled to ultra-high. Narrow ribbon is used as a decoration on various neckwear effects.

Veilings—There is a variety of novelities in meshes and in patterns. Bordered effects are strongly featured. Small designs in black and white and in white outlining on black meshes will continue in favor. Novelty outlining veils with fancy border and with plain center and border in contrasting color promise well.

Dress Trimmings—Hercules and Titan braids will be much in vogue. Narrow braids made up into fancy ornaments in conjunction with silk cordings are featured as one of the season's novelities. Narrow gold and silver braids in connection with soutache make effective trimmings. Cut steel and other metal effects will be used in combination with braids. Beads woven in with metallic effects are good. Jet will have extensive use.

Laces—Flit, Venise bands and edges, opalescent effects and sparkles on net are the newest things in the lace market. Metal and gold laces will hold good.

Embroideries—The various kinds of embroideries on sheer fabrics in all widths continue in demand. The continuance of the wide skirt brightens the outlook for embroideries.

Ribbons—Soft, high luster satins, together with moires, will dominate Millinery styles increase confidence in the vogue of plain ribbons. For dresses plain, high luster satin ribbons have the preference.

Gloves—The sleeve situation gives assurance for the sale of short gloves in a very high percentage. In embroideries two toned effects will be in vogue. The washable kids, especially in ivory and sand, will increase in favor.

Millinery—Simplicity of outline and meagerness of trimming characterize the new season hats. Much of the garniture will be in the form of appliques. Signal ornaments will also be seen. Colors are dark. Velvet and silk covered shapes, as well as pressed felts, are in evidence. Beaded novelities are a strong feature, as also are crown and brocade.

Buckle ornaments in cut steel and in nickel are prominent in the lines. Much attention is given to ostrich novelities.

Two Masked Robbers. [United Press Leased Wire Service.] BLOOMFIELD, Ind., Oct. 9.—Illinois authorities were looked for tonight to capture two masked men who held up the bookkeeper of the Latas Creek coal mine today, taking \$5,500 intended for the miners' pay envelopes. The men mounted a red tandem motorcycle and headed westward, apparently for Illinois.

THE WEATHER. [United Press Leased Wire Service.] WASHINGTON, Oct. 9.—Weather forecast: Illinois: Fair Sunday and probably Monday with rising temperature.

Missouri: Fair Sunday and Monday; rising temperature Sunday and in east portion Monday.

Iowa: Fair Sunday and probably Monday with rising temperature Sunday and in east portion Monday.

Local Observations. Oct. 9. Bar. Ther. Wind W'thr 8 7 a. m. ... 30.49 33 NW Clear 8 7 p. m. ... 30.23 49 SE r't Cl'dy Mean temperature 44; highest temperature, 56; lowest, 33; lowest Friday night, 29.

FRED Z. GOSEWISCH, Observer.

# You Can Be Beautiful Surely, Quickly

By Miss Valeska Suratt

Beauty Secrets That are Real Gems Revealed by Valeska Suratt, the Brilliant Actress, Famed for Her Self-Made Beauty.

brush as it did before, and you will be almost as proud of your head of hair as I have a right to be of mine.

MRS. PILGRIM.—As you were unfortunately not able to secure the sulfo solution (for removing superfluous hairs) at the drug store, write to my secretary, as follows: "Secretary to Valeska Suratt, Thompson Bldg., Chicago," enclosing the price, which is one dollar, and this unequalled hair-remover will be sent to you by return mail.

MISS PRETTY.—You will understand I cannot assure you, any more than can anyone else, that the best can be surely developed. Nevertheless, the formula I give here is admitted to be the most effective. For the purpose: Mix together two ounces of pectone, half a cup of sugar and half a pint of cold water. This makes a safe mixture, of which take 2 teaspoonfuls after each meal and at bedtime.

MRS. PEPPER.—Yes, it is possible to rid the face of blackheads in a few minutes by sprinkling some powdered norexin on a sponge, made wet with hot water, and rubbing this on the face on the parts affected with blackheads. There is no use pinching out these persistent blemishes, as this spots the skin. You can get the norexin at any drug store. I consider this one of my best formulas.

MRS. W. R. O.—In a great many face powders there is a chalkiness which makes the powder visible. That's why I use my own face powder made after my own formula. No one can detect its use, yet it gives an extraordinary tint, and smoothness to the skin. This "Valeska Suratt Face Powder" can now be obtained at many drug and department stores. If you find difficulty in getting it, write to my secretary as suggested above to Mrs. Pilgrim, sending fifty cents and saying whether you want white or flesh tint.

MISS ANXIOUS.—A remarkable preparation to prevent excessive perspiration in the armpits is hydrolized talc. It is absolutely safe, keeps the armpits naturally fresh and dry, and you will have no more growth ruined because of perspiration. Any drug store can supply you. It also destroys the odor of perspiration and other objectionable body odors.

MISS PICKETT.—My advice is not to use any of the superfluous hair burners advertised as one can easily detect the fact that you are afflicted with wild hair. Also, they leave a red spot or burn, irritate the skin, and sometimes remove the hair unevenly. Use instead, simple sulfo solution, which almost magically dissolves the hair, leaving no mark or injury. The simple sulfo solution can be secured at drug stores.

MOST of us do not realize how marvelously beautiful and how quickly the skin may become by the proper method pursued. Years of time and effort are spent, with expensive weak creams so extensively advertised, and with only one result, disappointment. I have had the same experience. Long had I struggled and waited for the beauty promised, until I decided to find the magic way myself. I can assure you that the simple, beautifying the skin are really astonishing. An illustration of what can be done is the skin shown by the result of my following formula:

Simply mix two tablespoonfuls of glycerine in a full pint of hot water and add one ounce of zintone, which any drug-store can furnish you. Stir until cooled. It is then ready to apply. This should be used on the hair, arms, face and shoulders liberally, every day. This quickly turns a skin, previously muddy, sallow or spotty into one of exquisite loveliness, pure in its tint, spotless as a lily, soft as velvet. Use it generously and every day faithfully and you will be grateful you followed my suggestions.

MISS N. R. S.—Here is my famous wrinkle formula. I am proudest of this, because there is no wrinkle eradicator I have ever known that has such prompt, visible results. Add two teaspoonfuls of glycerine and two ounces of epsom salt to a half pint of hot water. Stir constantly until cold. Use very liberally. The epsom you can obtain at any drug store. Mix the formula yourself at home and you will have a quantity of wrinkle cream which would cost a good many dollars were you to be able to buy it in the stores. It makes the skin youthful and plump, and all lines of age, wrinkles and crow's feet disappear in a very remarkable way, and you will look years younger.

AFFLICTED.—You will notice a tremendous difference in the lustre of your hair, in its fast increasing length, and its fluffiness, if you will make up the following formula yourself at home and use it liberally every day or so: Mix half a pint of water with half a pint of alcohol (or take a full pint of imported bay rum, if you prefer it) and add to this one ounce of beta-quinol, which you can obtain at any drug store. This makes over a pint of this remarkable hair grower, a quantity which would cost you many dollars if you could buy it at the stores. You will find that your hair will not come out by the handfuls on the comb or

of the eyeballs may make their all-important function abnormal, resulting in eye-strain with its attendant physical ills.

The eye responds to the slightest physical force in the world, that is light waves which are hundreds of millions of times more infinitesimal than sound waves. The eyes are the hardest worked of all the organs, and the safety and existence of human lives frequently depend directly on their accurate working.

The harmful results of eye-strain never wholly absent throughout life, may begin very early in childhood, even in the second year. Many little children, for instance, are constantly tearing their clothes, hurting their feet and legs, stumbling and falling, because their eyes are so faulty that their estimates of the size, location and nature of objects are not correctly made. Adults who have been blind and are suddenly given good vision, require years to learn to see with accuracy or safety in action.

Probably 6 percent of children are left-handed, left eyedness causing left-handedness. From 6 to 10 years of age many children show an incomprehensible "nervousness," twitching of the hands and face, fickle appetite and various disorders, all usually due to eye-strain. Yet almost all of these cases of eye-strain can be corrected, and should be relieved in early childhood. The importance of correcting this condition early in the child's school years, and the influence of such a condition in the education and development of the child must be apparent to every parent and teacher.

For Indigestion. I am a young woman of 20, and for the last four or five years I have been troubled with a disagreeable taste in my mouth, mornings and gas. I have a good appetite. Have tried doctoring without success. Do you think drinking water is beneficial?—Discouraged.

Your case calls for internal bathing to clean out the intestinal tract which is clogged and poisoned with toxins. Try a cup of hot water on arising, in which you have put a pinch of bearman face among all the world's sixteen hundred million may be held perfect, either artistically or physiologically. To the owner of the face, this help for the time being; but remove the cause by flushing copiously with pure water. Drink a glass of inch in the curvature or dimensions

of the enamel covering our teeth will last as long as we do if we intelligently co-operate in the care of them. This may be accomplished by simply paying a visit once a month to a reliable dentist and having the teeth are given a thorough cleaning—this to be followed up by daily faithful care—that is the brushing of the teeth upon rising and retiring and after each meal.

The health department of New York City has issued leaflets for the care of teeth, and it has given the following as a safe and cheap tooth powder: Two ounces of precipitated chalk, one-half ounce of powdered soap and one dram of powdered oris root.

Mouth germs can only gain a foothold where there is roughness to cling to. Decaying food creates acids which corrode the enamel and afford the desired roughness, and the tartar affords the same. It is easy to see why clean teeth are so necessary. If these mouth germs do get fastened upon uncared teeth it is almost impossible to dislodge them, as they are provided by nature with a glue-like substance by which they attach themselves, and there the stay and work destruction. Entering the teeth through tartar and caroded enamel, they do not stop until the tooth is decayed. Cleaning and polishing the teeth, keeps off the growth of tartar. If children's teeth are given a fair chance they may at the age of twenty be without a single cavity, and it is possible to prevent this decay for fifteen years, with care it is possible to prevent it indefinitely.

Decay is accomplished during sleep, and a good mouth wash upon retiring is advised. Nothing is better than one teaspoon of common baking soda in a half glass of water. The enamel of our teeth is one of the hardest substances known, but it is the one part of the human body which never grows new itself. Once destroyed nothing can replace it.

Measurements of human eyes demonstrate that there is probably no such thing in the world as an absolutely perfect eye. That would be a miracle which nature with all her genius has never since a child. As she got older she grew worse. She coughed both winter and summer. Had to sit up at night. Could not sleep. "But all that has left me now. Peruna has cured me."

There are others, and there is a reason.

# She Will Recover

So her doctor said. Her friends and neighbors felt sure of it too. They have used Peruna themselves and know of its merits. That old cough that had worried her for years and years, for which she had taken all sorts of cough medicines, has disappeared. Peruna is doing the work. She will recover. Indeed, she has recovered.

Her name is Mrs. William Hohmann, 2764 Lincoln Ave., Chicago, Ill. She had suffered with cough of the bronchial tubes and had a terrible cough ever since a child. As she got older she grew worse. She coughed both winter and summer. Had to sit up at night. Could not sleep. "But all that has left me now. Peruna has cured me."

There are others, and there is a reason.

Willmuth Merkyl, who has achieved renown in "The Victory of Virtue," his new photo-play. At the Grand this week.
