In the engagement yesterday the Bedouins and Egyptians, who advanced from Tel-el-Kebir under fire of 1,500 men, crossed the desert from Saliyeha and operated on the right flank of the British.

CLOSING THE RECORD.

REVIEW OF THE TWENTY-FOURTH ANNUAL STATE FAIR.

Some of the Notable Exhibits—The Precision Butter—Musical Instruments and Agricultural Implements—The Work of the Officers—Acknowledgments.

Retrospective. The past two weeks have witnessed the best and most satisfactory exhibition, from every point of view, in which the agriculturists of our section of country ever engaged.

The advantages of such an annual exhibition, when properly conducted, in acting as a stimulus upon the production of a better grade of products, and the introduction of better blood among our horses, cattle, sheep and swine, has caused our legislature to enact favorable laws for the organization and support of a state agricultural society, and the fair just closed at Rochester marks the twenty-fourth year of our Minnesota organization.

For the third successive year, as has been before remarked, Rochester, located in Southern Minnesota, has been selected as the most proper location, and as a better grade of accommodations were necessary than the past two years offered, the citizens of Rochester by the organization of a joint stock company and the liberal expenditure of money, rose equal to the emergency, and provided ample and desirable quarters for the reception of the samples of the wealth and increase of the state's agricultural products.

Under the stimulus of the united and earnest efforts of a set of officers who spared no pains or effort to make it successful, the state fair was the scene this year of an unrivaled and mammoth exhibition. Full accounts from day to day have been given of the more noteworthy and important of the exhibits, but in this, our closing allusion to the fair, there are several features which we do not wish to omit which we now take pleasure in mentioning.

SPECIAL MENTION.

Precision Butter.

During the past week the GLOBE has had numerous articles on the dairy industry of the state, which is taking such a hold on the farmers of Southern Minnesota, and which, in time, will be the leading industry of that section, as it has been clearly demonstrated that diversified farming must be the future agriculture in that locality, and it is well for the farmers that at the late state fair so creditable an exhibit of butter was made, as it shows that the creamery men of the state fully understand the business they are engaged in, and are pressing closely on Illinois and Iowa, for the supremacy as a butter state.

At the last fair there were a number of exhibits of really fine butter, and among them were the entries of Marvin & Cammark of Rochester, old creamery men, who were formerly in business in Iowa, and A. Y. Felton, of Plainview, Wabasha county, a gentleman who but recently embarked in the business, but one who has confidence in his ability to make it succeed.

The firm of J. D. Blake and Co. were established in 1861, and are now arriving at their full majority, and are for these presents declared to be citizens and legal voters. Their establishment is located at Nos. 223 and 225 Broadway, where they occupy three floors in each number 22400 feet in extent, and which when visited by the GLOBE representative were found to be filled to repletion with a mammoth stock of dry goods, notions, clothing, gents' furnishing goods, hats, caps, fur and an enormous stock of carpeting and oil cloths.

The following reports of the committee, who were selected on the class in the department of fine arts, in which musical instruments are found, speak volumes for the product, as well as by the scale of points adopted by the butter and cheese association of the state.

By far the most extensive display of agricultural implements and machinery upon the state fair grounds on this, their twenty-fourth annual exhibition, was that made by the above named firm. They are dealers in all kinds of farm machinery, buggies and wagons, and were assigned to a large space in machinery hall. At the head of the list stands the Walter A. Wood harvesting and mowing machines, manufactured at Hoosac Falls, N. Y.

This company presents the most successful and remarkable record of any factory in the United States. In 1853 their first year's work showed as manufactured and sold 500 machines; 1882 shows the incredible number of 44,226, and a grand total from beginning to end of 439,000.

Hallet and Davis Co. square parlor grand piano, for its many first class qualities, the chief of which are elasticity of touch and purity, depth and richness of tone, combined with great volume and fine singing qualities; also perfection of workmanship and design of case and solidity of construction, and the most approved manner in which it is strung.

This light running and excellent mower is kept by the firm of Robertson Bros., and was on exhibition during the entire fair. Of other tools and machinery handled by them, the Knowlton Cultivator, Belle City Feed Cutter, the Winona Rusford Wagon, Morrison & Skinner walking and riding plows, the McSherry seeder and the Abbott buggy, form the principal articles in the list, while of smaller tools, their assortment is complete.

The firm of Robertson Bros. have been in business in Rochester for nine years, and are thoroughly known to people in that vicinity, and so long as they continue to handle their present well known line of goods their trade must of necessity grow and increase year by year.

H. A. Brown & Co.

In the east wing of the Floral Hall no more attractive spot could be found during the fair than the exquisite display of the above named firm, Milliners and Ladies' Furnishing Goods dealers.

The firm of Robertson Bros. have been in business in Rochester for nine years, and are thoroughly known to people in that vicinity, and so long as they continue to handle their present well known line of goods their trade must of necessity grow and increase year by year.

J. D. Blake and Co.

In the fine arts department, while not entered for premiums, the mercantile display of the above named firm was well worthy of a favorable mention, and the GLOBE hereby presents it with a reward of merit.

The firm of J. D. Blake and Co. were established in 1861, and are now arriving at their full majority, and are for these presents declared to be citizens and legal voters. Their establishment is located at Nos. 223 and 225 Broadway, where they occupy three floors in each number 22400 feet in extent, and which when visited by the GLOBE representative were found to be filled to repletion with a mammoth stock of dry goods, notions, clothing, gents' furnishing goods, hats, caps, fur and an enormous stock of carpeting and oil cloths.

is a perfection of all the best systems that have been brought into successful use, while its peculiar features add so much to its perfection that no farmer can afford to buy a machine that does not possess them.

The Marsh-Whitney Platform Twine Binder. This, the coming grain harvesting machine of the world, notably attracted the attention of all classes of people at Machinery hall, as well as agriculturists.

The operations of this invention are simple, practicable and perfectly reliable, and all doubt as to the future supremacy of the platform binder vanishes the moment one sees it at work.

When in operation the grain is reeled down by a large reel, easily adjustable by the driver, is cut by the usual long throw sickle and falls directly upon the platform carriers, which consist of four endless chains with pivot folding teeth, is carried directly into the packing form, where the bundle is bound in short order and instantly discharged beside the large drive wheel through the large opening provided.

First—It has no elevator, canvas carriers or belts. Second—The main drive wheel is much larger than in elevating machines, which gives better traction and enables it to move over uneven surfaces with ease.

Fourth, it is shorter than any other machine of the same width of cut, is of less weight and light in draft. Fifth, the driver's seat is so located that all parts of the machine are visible and all levers for governing the operations are at his right hand and easily accessible.

Sixth, the machine is always perfectly balanced and has a two or three horse hitch with line of draft the same in either case. Seventh, all parts of the machines are perfect in their mechanism and all shafting of the binder is of the best of steel as well as all keys or pins.

As the GLOBE representative stood admiring the operations of a self binding machine in machinery hall, a farmer near at hand remarked: "used one of them this year, and it is a little the neatest thing ever turned loose in my field, I can tell you." Just here the operator dropped the reel way down below the sickle bar, moved it forward and back, raised it and stopped its motion by a single movement of the lever.
