

FIELD PEA IS FINE FOR CATTLE

NEW STOCK FOOD IS TO BE INTRODUCED EXTENSIVELY IN THIS STATE.

The Canadian field pea, which has been found to be of great value as a food for hogs and sheep in the San Luis valley of southern Colorado and other sections of the United States, is to be planted in numerous agricultural sections of Montana the coming spring.

Down in Colorado the field peas are matured and while yet green the hogs are turned into a field and are fattened. Sheep are turned into the same field, after the hogs, and they are very close feeders, as they will fatten off the same field which the hogs have just been through.

For fall market this method is in use on many of the large farms there and many tons of the peas and straw are also stacked and fed during the winter months, to both sheep and hogs.

T. A. Snidow, manager of the Snidow Sheep company, states that his company will plant a large acreage in field peas the coming spring, and a number of ranchers who are interested in the hog and sheep business in the valley, will also put in experimental crops.

Professor Alfred Atkinson, agronomist of the agricultural experiment station at Bozeman, has just issued a bulletin on the Canadian field pea, in which it is stated that the experience of the Montana experiment station, as well as of the growers of peas in different sections of the state, is that the crop is a success in Montana. The bulletin says:

"The test on varieties at the experiment station has not progressed far enough to indicate safe conclusions as to the relative yields. An average of all varieties grown during the years 1904 and 1905 shows a yield of grain of 35.5 bushels and of straw 2.34 tons per acre. With a total weight per bushel of 60 pounds, this yield shows profitable returns."

Both the grain and straw have a very high feeding value, as shown by a number of analyses.

Speaking of the value of peas as food for all classes of livestock, the Farmers' Bulletin 224 of the United States department of agriculture, Professor Thomas Shaw, formerly professor of animal industry in the college of agriculture of the University of Minnesota, says:

"There is no kind of livestock on the farm to which peas cannot be fed with positive advantage when they are to be had at prices not too high. They are not commonly fed to horses, since they are seldom so spared for such a use, but they make a good food for horses at work, and for colts during the period of development, if given as a part of the grain food. As a food for fattening cattle, peas are probably unequaled. Much of the success which Canadian feeders have achieved in preparing cattle for the block has arisen from the free use of peas in the diet. During the first part of the finishing period they will be found peculiarly helpful in making beef, owing to their relative richness in protein, but they are also a satisfactory food at any stage of the fattening process. During the first half of the finishing period peas will be found superior to corn, but toward the close of the same corn could probably be fed with greater relative advantage. Peas with oats or bran make an excellent grain food for cattle that are being fattened. Speaking in a general way, peas should form about one-third of the ration of the meat fed, but as every feeder knows the relative proportions of meat used should vary somewhat as the season of fattening progresses."

Daily Puzzle

VERY TRUE.
Most wives are inconsistent.
When husbands drive them to it,
They say "It's no use talking."
Then go right on and do it.

Who is listening?

PERSONAL.

ANYONE KNOWING THE WHEREABOUTS of Albinus will confer a favor by addressing Ed Grant, Almagordo, New Mexico.

BIG MONEY AGENTS: FREE SAMPLE offer (15 days on trial); brief, sparkling, famous Barfatto Simulation Diamond Ring; brilliancy equals genuine—detection baffles experts—fills every requirement of the most exacting—pleases the most fastidious—at only one-thirtieth the cost of the real diamond. As a means of introducing this marvelous and wonderful, scintillating gem, and securing as many new friends as quickly as possible, we are making a special inducement for the new year. We want you to wear this beautiful ring, this masterpiece of man's handiwork, this simulation that sparkles with all the beauty and flashes with all the fire of the genuine diamond. We want you to show it to your friends and take orders for us, as it sells itself—sells at sight—and makes 100 per cent profit for you, absolutely without effort on your part. We want good, honest representatives everywhere. In every locality, city or country, fact is, in every country throughout the world, both men and women, young and old, who will not sell or pawn the Barfatto Simulation Diamonds under the pretense that they are genuine gems as such action sometimes leads to trouble or embarrassment. If you want a Simulation Diamond, a substitute for the genuine, don't wait—act today, as this advertisement may not appear again—first come, first served. For free sample offer, beautiful Ring, Barfatto, Stud or Scarf (stick) Pin, address The Barfatto Diamond Co., Grand Building, Chicago. (Mention this paper.)

FOR SALE—MISCELLANEOUS.
