

PREPARE TO HONOR AVIATORS

DAYTON TO GIVE ROYAL RECEPTION TO ORVILLE AND WILBUR WRIGHT.

Dayton, O., June 16.—Gaily decorated flags and allegorical representations of aerial flights, Dayton is ready to begin tomorrow its two days' celebration in honor of Wilbur and Orville Wright. As the home of the aviators and the scene of their early experiments with flying machines, the city will endeavor to show that its esteem of its distinguished citizens is on a par with the attention paid them by rulers of Europe and the government at Washington. After firing a cannon tomorrow morning every whistle and bell in the city will unite in a salute. Following opening ceremonies the state militia will parade through the streets spanned by arches crowned with models of aeroplanes. In the evening the Wright brothers will be the guests at a reception.

On Friday medals awarded by the national commission and the state of Ohio will be presented. The medals authorized by congress from it will be presented by General James Allen, chief signal officer of the army. The Wright brothers probably will leave for Washington Saturday to begin next week their flights for the government.

SCIENCE SETTLES IT.

Dandruff is caused by a germ that saps the hair's vitality.

It is now a settled fact that dandruff is caused by a germ. Dandruff and baldness are the result of dandruff. Dr. E. J. Beardsley of Champlain, Ill. got hold of the new hair preparation, Newbro's Herpicide—the only one that kills the dandruff germ. He says, "I used Herpicide for my dandruff and falling hair, and I am well satisfied with the result." Dr. J. T. Fugate of Urbana, Ill. says: "I have used Herpicide for dandruff with excellent results. I shall prescribe it in my practice." Herpicide kills the dandruff germ. Physicians as well as the general public say so. Sold by leading druggists. Send the 10 stamps for sample to The Herpicide Co., Detroit, Mich. Two sizes, 50c and \$1. Missoula Drug Co., Special Agent.

TEN THOUSAND MEN WILL QUIT WORKING

Pittsburg, June 16. More than 10,000 excited workmen, members of the Amalgamated Association of Iron, Steel and Tin Workers employed by the American Sheet & Tin Plate company will quit work at 12 o'clock today in the "open shop" order. The company because effective. Many five-thousand workmen will also be affected. The conclusion to take this action followed a special convention held here.

In the Pittsburg district a majority of the mills of the American Sheet & Tin Plate company, a subsidiary of the United States steel corporation, are non-union. The combined plants which the strike order will effect will total 122 mills in the tin trade and 51 mills in the sheet steel trade.

A MISUNDERSTOOD PATRIOT.

On Tuesday, June 8, one hundred years will have elapsed since the death of Thomas Paine, the famous politician and religious revolutionary.

It is unfortunate that Paine, who was one of the most ardent and inspiring of the revolutionary patriots, should be known at the present day among large numbers of our population mainly as the "shorts example" of atheist whose deathbed was made fearful by visions of eternal torture. Paine's attitude toward religion was that of an age in which the higher criticism had not become almost a puerile platitude, when no compromise was possible between belief in the verbal inspiration of scripture and the rationalistic skepticism of the eighteenth century. Yet, even in those days Paine's anti-religious potencies were disregarded for the sake of his patriotic inspiration.

Paine's forcible and direct writings, had a powerful appeal to the people of his own time, and his versatility is shown by the variety of subjects which came within his ken. His entire life was spent in revolutionary movements, from the early days, when he championed the cause of the English exiles who desired an increase in their salaries, to his attack—perhaps the least justifiable—upon Washington. In 1795, when he accused the great leader of treachery to his country. Perhaps the noblest episode in his career was when he championed the deposed king of France, and pleaded that the man who had sent troops to aid the colonies in their war against England should not be sent to the scaffold, although he knew that by this fruitless advocacy of Louis he was imperiling his own life with the Jacobin leaders. "As France has been the first European nation to abolish royalty," said Paine, "let us also be the first to abolish the punishment of death." Paine's attack upon the Bible was un- scholarly, coming long before the more subtle sapping of religious ramparts through the work of Darwin and of the German critics. Nevertheless, his services to the cause of American independence were of the highest rank. Harper's Weekly.

An English expert who has been investigating the water supply question in London, has announced that storage reservoirs to filtration reduces the number of bacteria of all sorts of water, and, sufficient, prolonged, digestion, costiveness, liver or kidney disease, sleeplessness, sick headache, general weakness or malaria, fever and ague. S.S.S. CURES ECZEMA, ACNE, TETTER ETC.

While Eczema, Acne, Tetter, Salt Rheum, etc., are troubles which affect the skin, their source is far deeper than the outside surface. These affections are caused by irritating humors, or uratic acid in the blood. Such impurities fill and irritate the delicate network of fibrous tissue which lies just beneath the surface of the outer skin, and the inflammatory discharge thus produced is forced out through the pores and glands, and is continually kept up while the blood remains infected. This exudation causes the formation of scales and crusts so often seen in Eczema, and when they are scratched off the flesh is left raw and more susceptible to other infection. It can very readily be seen then that to produce a cure the circulation must be purified and cleansed. This S. S. S. will do. It goes down to the very bottom, removes all humors and impurities, neutralizes the excessive acids of the system and in this way recovers the cause of disease. Local applications can only soothe the irritation and assist in keeping the skin clean; they never produce a cure because such treatment does not reach the blood. S. S. S. restores to the thin, acrid blood all its lost properties, makes it pure and rich and enables it to nourish the skin and keep it soft, smooth and healthy. Book on Skin Diseases and any medical advice free to all who write.

THE SWIFT SPECIFIC CO., ATLANTA, GA

LAWSON'S DAUGHTER SOON TO BE MARRIED

MISS MARION LAWSON.

Boston, June 12.—At a magnificent mansion home, which is one of the most attractive in all suburban Boston, will be magnificently decorated for the occasion, Miss Lawson is one of the social favorites of the High city, and Mr. Lord is equally well-known in Chicago and Boston.

NOTES OF GOTHAM.

New York, June 12.—The removal of this city from the earth, it is now apparent, is only a question of time. This does not mean necessarily that Manhattan Island will sink into the sea under the tremendous weight of its skyscrapers or be destroyed by an earthquake as some cheerful scientists have predicted. It is merely the inevitable result of conditions already existing which affect every walk of life. New York will still remain on the map, for it is merely going up into the air and it will still continue to have its foundations on the solid rock far beneath the surface. Given a place to stand, however, similar to that demanded by the ancient philosopher who provided that if such a spot were provided he would move the whole earth with a lever, this city might actually affect a physical divorce from the earth in addition to the social separation which is now going on.

The coming of the summer season only serves to emphasize the fact that New York is rapidly becoming America's first aerial city. It is not alone because of roof gardens, roof terraces and the like, that this approach is made clear, but in many other fields as well, and it is daily becoming more apparent that with the achievement of a practical means of air travel thousands of persons in this city will seldom set foot on earth from one year's end to the other.

Already indeed the new air life is a large part of every walk from the roof of some lofty building to the aged capitalist who builds a suburban ash his residence in order to secure fresh air and sunshine. For one thing it is evident to those who have studied the subject that unless the younger generation is permitted to play in the air New York will shortly evolve into the playless boy. There is no room left on the surface for his pastimes and consequently he is already going above it. Baseball, marbles, top spinning and all the other sports of youth are already being indulged in by thousands of children hundreds of feet up in the air in the aerial playgrounds established on the roof of the city's lofty buildings. Play in the streets long ago became simply an invitation to death from automobiles, street cars and other forms of traffic. So serious had this matter become that before the aerial solution was achieved it was seriously proposed to close up certain cross-town streets during certain hours of the day to provide a

playground for children as a last defense against the playless youngster—or rather the girl, and in this case, the study boy. But by taking the children off the earth the matter has received a happy solution. Of course, that is only one manner which indicates the extent of which New York is getting away from terra firma.

It is, however, the field for which it is most widely known, that is, that of popular amusement and recreation—that the indications of a city whose inhabitants will seek their diversions in aerial regions is most clearly foreshadowed. The roof terraces, roof gardens and roof entertainments of all other kinds will, it is estimated, have an attendance of at least 15,000,000 during the next four months, and an average height of more than 150 feet above the earth. And it is only a question of time when these pastimes will have become air folk in every sense by coming from their up-in-the-air apartments to their up-in-the-air entertainments in aeromobiles instead of earth craft, as is now the case.

In other words, the "grownups" of this city are in exactly the same boat as the youngsters. They are forced to look for their fun up in the air, as might be expected, the elders who pay for their play are at present better provided for in the line of aerial recreation than the children who do not pay. Indeed, the world has never seen a city which offers so many and so varied aerial attractions as New York. For those who wish to attend a theatrical performance there are air shows which run the whole gamut from the strictly legitimate to the half-bred thing in vaudeville, including one roof theater which is depicting an English country scene, has a roof garden with real vegetables growing far above the earth. The more conventional entertainments of society, too, are rapidly leaving the earth. Roof dances, roof bridge and similar forms of diversion are already here. Only recently the Debutants of the Confederacy gave a dance on the roof of one of the city's largest hotels.

It is in the ever-increasing popularity of the hotel roof gardens, however, that the dawn of the air age is most strongly indicated. How great the popularity of these aerial recreation grounds has become is shown by the fact that the one on the roof of the Hotel Astor in Longacre square, which was the largest in the city last year, is being doubled in size this season and is now, it is asserted, the largest of its kind in the world. On it the proprietor of the hotel has created an airship landing where future visitors may arrive and depart in dirigibles or

DANGER FROM NOISELESS GUNS

One hardly knows whether to congratulate science upon the recent invention of noiseless firearms or console with the human family over the many dangers arising from its use. It is easy to imagine the effect if they became used generally. There is also great danger in allowing the stomach to become weak, the bowels clogged and the system run down, but if you will only take Hostetter's Stomach Bitters at the first symptom such sickness can be avoided and the danger reduced to a minimum. Don't waste time experimenting with other medicines, now that you know which is the best. For 35 years Hostetter's Stomach Bitters has been moving its mark in cases of poor appetite, belching, indigestion, costiveness, liver or kidney disease, sleeplessness, sick headache, general weakness or malaria, fever and ague. Try it today.

MISSOULA'S BIG MODERN STORE

Men, Get the Best

Poor clothes are no good at any price. Just read the following facts---there are three

The money you put into one of our suits insures you the service of two ordinary suits. That is fact No. 1, and we have not yet mentioned the style and beauty that goes hand in hand with the wear-resisting qualities of the famous Alfred Benjamin New York-made clothes. Fact No. 2 is that you can get exclusive style here, and it's not that kind of style that is misshapen and conspicuous, but the refined and irreplaceable cut, pattern and finish that is beyond criticism.

But the main point is quality. In this half-minute talk here we cannot tell you every point of quality that our clothing has, but our reputation as Missoula's most reliable clothiers is founded only on those kinds of men's clothing made by old and reliable tailors of national repute and whose products are universally recognized to be the best. That's the kind of clothing we are trying to induce you to buy and it costs you only \$17.50 or \$20 or even \$22.50. Right here we state fact No. 3. These prices will buy clothing of exceptional worth and they are the lowest prices on top of earth that can buy clothing with any merit whatever. Alfred Benjamin is the name of the clothes; \$17.50, \$20 and \$22.50 are the prices, and Donohue's is the place. Come; make our clothing man show you.

Separate Trousers

A nice roomy cut pair of trousers would do wonders toward brightening up your old coat and making it look new and fresh again. We have the most comprehensive lines of separate trousers in our city, while the materials may be had in a variety of good hard or soft finishes. Enough patterns to select from to make choosing easy and you are sure to find anything you want. Prices as low as \$2.50 and \$3, up to \$5, while the finest dress trousers cost only \$8.

SALE OF Fancy Wash Vests \$2.50

VALUES AS HIGH AS \$5

A sale that is right in line with the season; the summer has not begun yet. Upward of 250 fancy wash vests, with actual values in the lot ranging as high as \$5, can now be bought here at \$2.50. Come in single or double-breasted styles, high or low cut, as desired. Hardly any two patterns are alike. Choose from the entire number at the one price.

airplanes as they now do in carriages before the street doors.

The making of such an air garden as that of the Astor, which has an area equal to 28 ordinary city lots or enough for a good sized park, is in itself a tremendous task calling for many kinds of artistic skill which is rapidly producing a class of aerial gardeners, corresponding to the landscape gardeners who work on the earth. There are broad gardens of flowers and shrubs and groves of trees, waterfalls dashing over real moss-covered rocks, long walks under vine-covered arbors or overlooking the city and the Hudson. Every effort is made to reproduce an attractive country estate in the midst of the city and on the most luxurious scale. Such examples as this indicate the tremendous advance that has been made since the first roof garden was established in New York nearly 20 years ago with only a dozen or so ragged palms and rubber plants to heighten the outdoor effect.

It must not be thought, however, that the air age is arriving only so far as amusement, whether juvenile or mature, is concerned. It is coming too in the more serious walks of life. There are countless other thousands who eat and sleep and have their home life far above the street. One hotel now has a tent colony on its roof, equipped with electric lights, hot and cold water and all the other conveniences of life. There are also a number of roof apartments which may be leased by the would-be air dweller. One of these typical of what may shortly be generally expected in this line is on the roof of a 12-story apartment building. The roof has been treated as a building lot, and on it erected a seven-room one-story house. Flowers and shrubs grow on all sides and there is no breeze that blows by which it does not benefit. It is, in short, the rapidly coming aerial compromise between urban and suburban life.

In every walk of life then, whether it be business, home or amusement, and whether for old or young, New York is rapidly becoming a city of air inhabitants. It is daily being more and more thoroughly removed from the earth. And with all its human activities being carried on more and more completely in the air, it is not at all unreasonable to predict that the solution of the problem of aerial travel will produce a race of people who rarely descend to earth—the inhabitants of the world's first aerial city.

An interesting plan intended as a step toward the solution of the liquor problem may shortly be tried here. It will consist of a series of cafes organized on the model of the famous

German beer gardens, where only malt liquors and light wines will be sold. There are at present a number of places in New York, especially in those sections where the German element predominates among the population where this class of drink makes up four-fifths of all the sales, but even in these establishments other liquors are kept in stock and are served to customers who may order them. The new proposal which comes from investigators who have been studying the question of the saloon in its relation to social conditions seeks to separate the dispensing of alcoholic beverages into two distinct branches on the theory that most of the disorder and the evil conditions charged against saloons arises from the consumption of "hard" liquors. The liquor dealers themselves say that the plan is impracticable in states where high license fees are charged for the reason that their profits are much greater on the more expensive drinks than on the lighter beverages such as beer. In view of this fact it is probable that an effort will be made by the civic workers interested in this plan to have various legislatures provide a special license at a reduced cost to permit the sale of light wines and malt beverages only. The experiment, if tried, will be watched with much interest for its effect in improving conditions in communities like New York, where there is comparatively little sentiment in favor of prohibition.

This city which, according to would-be reformers, has long had various political, financial and municipal white elephants, though lacking a

specimen of the four-legged variety, is now to have a white whale, or perhaps two of them. At any rate Assistant Curator Andrews of the Museum of Natural History has just set forth on an unique fishing trip on the St. Lawrence river for the purpose of catching some white whales and bringing them back to New York alive to sport in the aquarium and the zoo. Every spring, it is said, the white whales appear in that river, coming from no one knows where, and are promptly massacred by the inhabitants for their oil. It is at this annual hunt that Assistant Curator Andrews hopes to obtain a live specimen. If he is successful the country will witness the spectacle of a live whale traveling overland for nearly 1,000 miles and in a private car at that. Arrangements are already under way, indeed, to bring specimens to this city either in a tank or a flat car. Either task would be extremely difficult since these fish attain a length of 25 feet. If it be necessary to use a flat car the whale will be lashed on it and then surrounded with seaweed, which will be kept constantly wet. Food will be administered by attendants, who are being taken along just for this purpose. Altogether the plans evolved for the catching of a live whale have in them all the elements of the biggest fish story on record.

Because the blowing out of fuses have caused panics among passengers, new cars being built in St. Louis are carrying the fuses on the outside, the smoke and discharge material passing through slatted openings to the outer white elephants, though lacking a

What Ails You?

Do you feel weak, tired, despondent, have frequent headaches, coated tongue, bitter or bad taste in morning, "heart-burn," belching of gas, acid rising in throat after eating, stomach gnaw or burn, foul breath, dizzy spells, poor or variable appetite, nausea at times and kindred symptoms?

If you have any considerable number of the above symptoms you are suffering from biliousness, torpid liver with indigestion, or dyspepsia. Dr. Pierce's Golden Medical Discovery is made up of the most valuable medicinal principles known to medical science for the permanent cure of such abnormal conditions. It is a most efficient liver invigorator, stomach tonic, bowel regulator and nerve strengthener.

The "Golden Medical Discovery" is not a patent medicine or secret nostrum, a full list of its ingredients being printed on its bottle-wrapper and attested under oath. A glance at these will show that it contains no alcohol, or harmful habit-forming drugs. It is a fluid extract made with pure, triple-refined glycerine, of proper strength, from the roots of native American medicinal forest plants. World's Dispensary Medical Association, Props., Buffalo, N. Y.
