Fine tailored suits worth up to \$40.00, **\$25.00**

Fine tailored suits worth up to \$50.00, **\$32.50**

## Pretty Lingerie Waists Worth \$2.50 for Only \$1.25

Within this assortment of 150 pretty waists many beautiful ideas abound. The materials are the qualities you will find in waists of a much higher price. Sheer, crisp lingerie inlaid with dainty lace insertion or garnished with elaborate embroidered effects. In order for you to duplicate these values you would have to pay three times as much, though we know, even then, you could never get their equal in beauty.

## A VITAL INTEREST IN WORK

### RECLAMATION WORK OF GREAT IMPORTANCE TO STATE OF WASHINGTON.

Spokane, June 30.—Congressman Miller, Peabody of Spokane, representing the Third Washington district in congress, writes as follows from Washington, D. C., to R. Insinger, chairman of the board of control of the National Irrigation congress, in response to an inquiry as to the extent to which the state of Washington is interested in the questions affecting irrigation, drainage, forestry, deep waterways, good roads and home-building, and as to the manner in which the seventeenth session in Spokane, August 9 to 14, can be made of the greatest benefit to the state.

"I would say that the state of Washington is as much interested in the public improvements referred to as any other state in the Union. My opinion, as frequently expressed, that the most important event in the material development of Washington was the advent of the national government into the work of reclamation of arid and semi-arid lands.

"It does not require a dissertation on the subject to make obvious the fact that vast areas which are now practically incapable of supporting any population being irrigated and gradually gotten into a state of high cultivation so that they will support a larger population to the square mile, perhaps, than any other lands in the world, will confer a maximum of benefits on the state of Washington.

"I have no doubt that this work will be carried to a point which will even far exceed our anticipations at the present time. Such districts as the Hores Heaven, Cheney Flats, large areas in the vicinity of Pasco, and, perhaps, portions of the Big Bend, will undoubtedly some day be subjects of a very large irrigation enterprise.

**A Compliment.**

"Forestry should properly be regarded as a complement of irrigation and the means of irrigation in Washington must depend to a certain extent upon the conservation of the tremendous sources of water supply in the forests on the western slopes of the Coast Ranges, Bitter Roots and the Blue mountains and in the great eastern watersheds of the Cascades.

"So far as good roads are concerned I am firmly convinced that national road-building will very soon become

again, as it was in the early days of the republic, a national issue, and I am heartily in favor of a liberal and progressive policy of national road-building. We should have a complete system of national roads covering the length and breadth of the republic, to be supplemented by state roads covering the various states, and these still further to be supplemented by county thoroughfares, which, in turn, would be fed by township and neighborhood roads built upon scientific plans, and to a large extent, at public expense.

"The only reason that such a policy has not heretofore been thoroughly developed has been the fact that we have been living in an iron age, absorbed in the settlement and pioneer work of an absolutely virgin continent and depending upon railroads for transportation. With the increase of population it is now being realized that wagon roads are just as essential as railroads, both as feeders for the latter and as a means of transportation and travel in themselves. The entire commerce of a country passes over its roads.

"Of course, volumes might be written on the subject suggested in your letter, but suffice it for me to say at this time that in my judgment the drainage and reclamation of swamp lands in the states mentioned by you is in principle just as important and desirable as the irrigation of arid lands since the ultimate result in both cases is the same—namely, the multiplication of the resources of the country and the creation of the prosperous homes out of a barren waste.

"I am also absolutely committed to the policy of the utmost practicable development of our waterways, both as supplementary to other means of transportation and also as physical regulators of railroad rates. I know of some instances in this country where, very uneasily, the people have allowed to pass out of their control forever canals which have been built at great public expense out of the taxation of the people.

"In some cases these canals were utterly abandoned; in others they were gone into the control of private transportation companies, thereby absolutely losing their capacity as public regulators of transportation rates. One open river or navigable canal is capable of transporting as much traffic as 20 railroads, while in most instances it could be constructed at the cost of one."

Delay in commencing treatment for a slight irregularity that could have been cured quickly by Foley's Kidney Remedy may result in a serious kidney disease. Foley's Kidney Remedy builds up the worn-out tissues and strengthens these organs. For sale by Garden City Drug Company, George Freesholmer, proprietor.

## YOUNG GIRL RELATES PITIFUL STORY

### MAMIE NEUBAUER TELLS OFFICERS TALE OF MISTREATMENT AND ABUSE.

At midnight, after stumbling over rocks and trees for miles down the banks of the Battlesnake and right-angled almost to incoherence, Mamie Neubauer, a waitress in the Windsor hotel, brought the sheriff's office an almost unbelievable story of mistreatment and cruelty. As a result W. L. Gavin, a Northern Pacific freight conductor, is in jail facing two serious charges, and the officers are scouring the country for some trace of Harry Flynn, a brakeman, who is the alleged accomplice of the conductor, and who, with the sister of the girl who told the story, is still missing. According to the tale which the frightened girl told the officers on her arrival, she and her younger sister, Agnes Neubauer, while on their way home last night, were met by Gavin and Flynn, who were in a buggy and offered to take them home. The girls accented, and as soon as they were seated in the rig the horses were whipped up and headed toward the Battlesnake.

**A Trip in the Dark.**

The girls protested, but the men would not listen and finally when she realized the position in which she and her sister were, the older girl seized the lines and, stopping the horses, jumped out. The horses were whipped up again, however, before the younger girl could get away, and the older was left to make her way home as best she could. She got here after a stumbling trip down the creek bed in the dark, and went at once to the sheriff's office, where she notified the officers of her sister's plight. Sheriff Graham and a deputy set out at once, and after searching the country diligently returned to find that the buggy had been brought back while they were gone. After a short search the conductor was located in the Office bar, but no trace could be found of the brakeman.

When Gavin was taken to jail he refused to give any information as to the whereabouts of Flynn, or, for that matter, as to the affair at all. The search was given up for the night, but the officers, believing the younger girl and Flynn to be still in the Battlesnake, will make a more diligent search this morning.

## THE WEATHER

Yesterday was by six degrees the hottest day of the year, and in any other city than Missoula there would have been prostrations in plenty, with the same degree of heat. High and dry is Missoula, thousands of feet above the humidity belt, and while the weather wasn't just what might be termed "comfy," still it was bearable and nobody was struck. Without a cloud in the sky the sun sent down his copper rays from early to late, and the mercury responded by rising to 94 degrees above zero, the record for the summer. The observations:

Maximum	94
Minimum	58
At 6 a. m.	
Thermometer	53
Barometer	29.83
At 6 p. m.	
Thermometer	60
Barometer	29.84
Wind from the southwest.	

## HOWARD TOOLE RETURNS.

Howard Toole, son of Mr. and Mrs. John B. Toole, has arrived home from Lawrenceville, N. J., where he has been attending the preparatory school for Princeton. He will spend the summer vacation with his parents, returning to school next fall.

## DAUGHTER IS BORN.

Word was received in the city yesterday that a daughter was born to Mr. and Mrs. Norman Poole of Joliet, Mont. Mrs. Poole was formerly Miss Cora Averill, and is a well-known alumnus of the state university.

## Terribly Scalded

is something we hear or read about every day of our lives. Burns and scalds, either slight or serious, are bound to happen in your family; be prepared by having a bottle of Ballard's Snow Liniment handy. It relieves the pain instantly and quickly heals the burn. Sold by George Freesholmer.

## STUBBS DISCUSSES MOUNTAIN LOOKOUTS TO BE USED FOR IRRIGATION

### TRAFFIC DIRECTOR OF HARRIS LINES TELLS OF ITS GREAT IMPORTANCE.

Spokane, June 26.—"I believe the problem of irrigation and the conservation of our forests to be the commanding questions for the region between the Rocky mountains and the Pacific coast," writes J. C. Stubbs of Chicago, traffic director of the Harris line system, in a letter to R. Insinger, chairman of the board of control of the National Irrigation congress, to meet in Spokane, August 9 to 14, adding:

"The annual session of the irrigation congress has done much to enlist public interest, but there is a lot more for it to do. It is too near the truth to be ignored that the populous, and politically and commercially dominant section of the United States lying east of the Missouri river is not as much interested in these questions as its people should be.

"According to my recollection the meetings of the irrigation congress in the past have all been held in the far west. Why would it not be wise to hold the next meeting of the congress at Chicago, or some other politically and commercially strong center east of the Mississippi river to enlist the sympathy and support of the people in this eastern territory in the promotion of the irrigation policy of the government."

Mr. Stubbs probably will be a speaker at the first or second session of the congress to permit him to return to Chicago by August 15.

## FILES A SUIT.

Memphis, Tenn., June 30.—In an attempt to force him to continue the manufacture of beer and at the same time test the constitutionality of the law prohibiting the manufacturing of liquor in Tennessee, stockholders in the Tennessee Brewing company of this city today filed an injunction suit against John W. Schoor.

## PREPARE FOR MEETING.

Seattle, June 30.—The officers of the American Women's Suffragist association devoted the day to conferences and preparation for the national convention which will begin tomorrow afternoon.

## business on the national forests has grown to such proportions that less than 25 per cent of the force is available. This makes it necessary to spread an average man's service over nearly four times 128,000 acres, decreasing the protection far below the point of safety in many cases.

### FOREST SERVICE MEN WILL WATCH FOR FOREST FIRES FROM HIGH PEAKS.

Working along the line of scouring the greatest results in protection against fire, with a minimum of expenditure, the forest service has decided to establish on the most advantageous points of the national forests in the west a series of lookout stations from which news of the breaking out of forest fires can be telephoned to forest officials.

Since all of these stations will command a view of the country for miles around the work of detecting and extinguishing fires in their incipency will, by this plan, be greatly expedited, with the result that many thousands of dollars worth of valuable timber will be saved annually.

In most of the national forest states the climate is very dry and the rainfall light. Conditions, therefore, are remarkably favorable for the spread of fire and extraordinary diligence is necessary in patrolling dangerous areas. To administer the vast area included in the national forests, approximately 195,000,000 acres, the government has about 1,000 men in the field. If such men could be used for fire patrol he would have to cover approximately 128,000 acres. As a manager Ridgeway, who is to retire tomorrow.

## PRESIDENT JEFFREY SOON WILL RETIRE

Denver, June 30.—The Post today says: Complete reorganization of the Denver & Rio Grande road is near at hand according to the most reliable information obtainable in Denver, and it is asserted positively that President Edward T. Jeffrey is soon to retire.

It is practically admitted by Vice President Charles H. Schlacks, who has just returned from a conference with President Jeffrey and other representatives of the Granite in New York city, that the reorganization of forces is soon to occur.

In connection with this the name of F. A. Delano, formerly president of the Pittsburgh Terminal Railroad company, is mentioned as the possible successor to President Jeffrey, and W. L. Park as a successor to General

# S.S.S. CURES SKIN DISEASES

The cause of all skin diseases can be traced to some humor or acid in the blood; the cuticle is always healthy where the circulation is free from impurities. When the blood is infected with acid or unhealthy matter it cannot perform its natural work of nourishing the skin, regulating its temperature and preserving its normal softness, pliability and healthfulness. Instead it irritates and inflames the delicate fibres and tissues around the pores and glands and produces some of the many forms of skin disease. The itching and stinging so often accompanying skin affections are produced by the deposit from the blood of the acid humors with which it is filled, into the sensitive membranous flesh lying just beneath the outer covering, and surrounding the countless nerves, pores and glands. This explains why scratching the outer skin affords no relief from the itching and burning. S.S.S. cures skin diseases of every character by purifying the blood. It cleanses the blood and produces some of the many forms of skin disease. The itching and stinging so often accompanying skin affections are produced by the deposit from the blood of the acid humors with which it is filled, into the sensitive membranous flesh lying just beneath the outer covering, and surrounding the countless nerves, pores and glands. This explains why scratching the outer skin affords no relief from the itching and burning. S.S.S. cures skin diseases of every character by purifying the blood. It cleanses the blood and produces some of the many forms of skin disease. The itching and stinging so often accompanying skin affections are produced by the deposit from the blood of the acid humors with which it is filled, into the sensitive membranous flesh lying just beneath the outer covering, and surrounding the countless nerves, pores and glands. This explains why scratching the outer skin affords no relief from the itching and burning. S.S.S. cures skin diseases of every character by purifying the blood.
