

Now You Will Have to Hurry

ONLY 2-TWO-2 DAYS MORE

FRIDAY AND SATURDAY

Of Our Great

Furniture Removal Sale

Closing time next Saturday night will mark the close of the greatest, most successful House Furnishing Sale ever recorded in Missoula. A sale that has been the means of making hundreds of pleasant homes and saving thousands of dollars for those who have taken advantage of it. It is an opportunity the like of which may not come again in your lifetime, and it is for you to make the best of it in the two remaining days, or include it with other losses.

Every Article in Our Present Quarters Finally Reduced. You Can Furnish Your Entire House During These Last Days and Save 50 Per Cent and More on Everything Needed.

Carload after carload of brand new Furniture, including Carpets, Draperies, Bedding, Etc., have already been taken to our new store in the new Chaney block; next Monday we begin vacating the rooms in our main store occupied so long and arranging our new quarters for business. We want to sell every piece of furniture, every yard of carpet, every rug, everything in these old departments so our task of moving will be light and quickly done. The sacrifices we are willing to make now in order to accomplish this end are without precedent and no home-maker can afford to overlook them.

THOUSANDS OF WONDERFUL BARGAINS

As will be understood from above, the remaining days of this sale will be devoted entirely to clearing out the sample pieces and stock at present shown on our display floors. There are hundreds of pieces of Furniture of every description, for every purpose, and no two pieces alike, and of these you can make selections at prices lower than you ever dreamed of, and the same applies to the Carpets, Rugs, Draperies, Etc.

Come as Early Today as You Can

Don't wait a minute longer than necessary to attend this sale. There are always many who wait until the eleventh hour and then have to be satisfied with what those who came earlier left behind. The prices are on the bottom and today the variety from which to make selections is still good.

Missoula Mercantile Company

NOTES OF SCIENCE

Great Britain granted 28,598 patents last year, 420 less than in 1907. Of the total 1,450 were granted to residents of other countries and 572 to women. In a series of telephonic experiments

a German scientist has made magnets, alternating current transformers and even dynamos talk without the use of vibrating plates or membranes. A French fisherman who dyed his nets a color very nearly that of sea water with bluestone made much larger catches than any of his comrades, who used the familiar brown nets, until his secret was discovered.

Electricity is the only illuminant used in the White House, and in many respects the electrical installation is the most elaborate and complete in any residence in the country. Berlin's elevated and underground electric cars are equipped with switches to short circuit the third rail current to the earth in case of an accident, which necessitates an im-

mediate cutting off of the deadly fluid. In British Columbia platinum is found in many alluvial gold workings as a by-product, but its separation is attended by too many difficulties to be practical except in a few instances. Plastic slate, made by mixing one part coal tar and four parts slate dust, is useful for covering wounds in trees, as a tightening agent for

water pipes and in place of putty in greenhouses and hot beds. The six-mile Gunnison irrigation tunnel in Colorado, when completed, will be the greatest artificial underground waterway in the world, as well as the greatest piece of concrete work. The art of making tin plate was discovered in Bohemia in 1600, introduced into England in 1605, into France in

1714, and brought to a state of perfection in the United States late in the last century. A Pennsylvanian has been granted a patent on an electrical rat trap which resembles a rather flat bell. When a rat climbs upon it to reach the bait it completes a fatal circuit. According to a story printed in Washington, President Cyrus Northrop

of the University of Minnesota, who was once the teacher of William Howard Taft, will be offered a diplomatic appointment by his old pupil. Textiles may be rendered fireproof, according to the Paris board of fire commissioners, by steeping them in a 10 per cent solution of phosphate of ammonia then drying them in the open air.
