

REMARKABLE INVENTION PRESENTS UNUSUAL INVESTMENT OPPORTUNITY

The Burlingame Typewriter Telegraph Astonishes the Business and Scientific Worlds and Is Demonstrated to Be a Complete Practical Success—The Stock of the Manufacturing Company May Be Obtained Now.

Anything that depends on human endeavor or effort is subject to occasional mistakes. "To err is human." The Burlingame telegraphing typewriter, being entirely mechanical at the receiving end and practically so at the sending end, will make no mistakes.

Because of its simplicity and accuracy, requiring no expert to send a message and no one at all to receive it, several of the foremost electrical engineers, expert telegraphers and other men prominent in governmental circles state emphatically that the Burlingame invention should shortly supplant the Morse system everywhere.

Different individuals from various departments of the United States government who have examined the Burlingame instrument have indicated its many uses. It would take the place of the instruments now being used in connection with fortifications, where during target practice, messages are required to be sent every 15 seconds changing the range of cannons. It would replace the government Morse instruments now in use. The Burlingame instruments send, receive and record all in one machine. There is practically no limit to the government uses for this device where a record of messages and secrecy is desired.

In city government the Burlingame instruments could be used in connection with fire and burglar alarms and police patrol.

They could also be used in all of the public buildings, such as court houses, jails, asylums and other public institutions; they could connect all departments of the city on one wire if necessary, or one line in each building could connect all of the typewriters on one circuit; or in case of alarm, or public notice, etc., every office of the city government could receive the same message simultaneously.

Every policeman on his beat could receive printed instructions from headquarters, and could send in a detailed report from his beat. Should anything sensational happen it could be recorded in every police box in the city, giving every policeman a detailed printed description of the event, whatever it might be.

Should the Burlingame machine not be used for regular telegraph purposes at all and its uses confined to the United States government, the coast artillery, the signal service, the navy (including its uses on board ship), and navy yards, etc., and for municipal government in connection with police alarms and other alarm systems, it is estimated that these uses alone would require several hundred thousand Burlingame instruments.

We will say that the artillery for the coast defenses would use 100,000 machines, which is a very conservative estimate; that the United States army in connection with the signal service would use 100,000 machines; and that the navy, in connection with the ships and navy yards, would use another 100,000. A large city like New York city alone would require perhaps 50,000 machines for municipal purposes. Many hundred thousand machines for other municipalities would be required.

Suppose, in order to be on the safe side, we underestimate the total number that would be needed and figure that the national government and the principal large cities would use only 200,000 machines, and that the Burlingame would be used for no other purpose. From this source alone the Burlingame company would have a gross rental income (at \$5 a month) of \$1,000,000 per month, equal to \$12,000,000 per year. We will estimate that it would even then show an amount sufficient to pay 40 per cent on the par value of the capital stock of the Burlingame Telegraphing Typewriter company.

Now, for the cautious investors, or for the man who did not buy Bell Telephone, and for the man who failed to buy Linotype stock at a few dollars per share, which is now selling for over \$200 per share, and for the man who failed to buy Western Union, Sewing Machine, Edison, Westinghouse Air Brake and stock in like inventions, we will say for this man's benefit and to answer his arguments, that we will wipe out, eliminate the prospective earnings of 20 per cent from the telegraph service, of 40 per cent from the government service as above outlined, and we will now undertake to show the profitable side of the Burlingame invention as it could be used in connection with corporations.

Uses of the Machine.
Every corporation is interested in anything that will facilitate or economize in time and expense on their present business systems.

The banks were not slow in adopting the adding machine. The banks today use every device known to assist them in their daily transactions. As an immense amount of business must be crowded into a few hours, it must be done accurately and quickly. The business world today wants something that will leave a record at both ends of the line instead of the present uncertain methods employed.

For the transmission of messages to day large corporations use the tele-

phone, the telegraph, the telautograph, compressed air tube systems, speaking tubes, messenger boys. But none of these methods seem to be complete nor do they answer all the requirements.

With the telephone, no record is left at either end of the line, and it is a continual source of annoyance to the busy man for many other reasons. All other systems have their faults as well. The Burlingame would facilitate corporate business—take a bank for example. The president of the bank could call in the teller or cashier or any employee of the bank with a signal on his Burlingame and transmit to that party a confidential message—with the Burlingame Selective Switch device, no other person could cut in or receive this message. It would also be possible for the president to call everybody in the bank by the simple pressing of a button, and deliver the same message to every employee in the bank instantly, leaving a record on his own machine and a "carbon copy" on the machines in all the departments. This same system would work in any of the other stations in the bank. One teller could call another teller, or any other official, or he could call everybody at once and deliver a message.

This system could be applied in banks, in large department stores, wholesale houses of every kind, factories, steel and iron plants, shipyards, mines, docks, lumber yards, etc.; in large hotels, office buildings and large factory offices of all kinds; in fact, almost every corporation would have use for from two to hundreds of the Burlingame machines.

There are 24,889 banks in the United States, and it is safe to say that not a single one of these banks is without an adding machine today, which shows how eager the banks are to grasp everything that will facilitate business.

Take each one of the corporation uses of the Burlingame invention and figure the number of machines that would ultimately be required to cover this field alone. The result will be as staggering as the telephone figures, where one takes the time to figure the number of telephones in use and the comparative number five, ten or twenty years ago.

The Bell Telephone company has assets of about \$500,000,000, and has in use about 4,000,000 telephones. The total assets of all telephone companies are something over \$2,000,000,000. Therefore the Bell Telephone company represents about 25 per cent of the telephone business of this country. This would make the estimated number of telephones in use in the neighborhood of 16,000,000; but we will, for the benefit of the doubter, cut these figures in two and say there are not more than 8,000,000 telephones in use. Then we will consider that one-half of these phones are used for business purposes and by corporations. We estimate that for corporation purposes as many Burlingame instruments would be required as telephones. But even if only one-half as many were used, it would then require 2,000,000 machines for corporation purposes. Cut it in two once more and say that only one-fourth as many instruments would be used as telephones, and then divide it by two once more, to make sure to being down to rock bottom, and you would have at least 500,000 required for corporation uses.

Suppose that these machines bring in a rental of only \$3 per month for corporation uses. It would make a gross income for the Burlingame company of \$4,500,000 per month, or \$18,000,000 per year—over 100 per cent on the capitalization of the Burlingame Telegraphing Typewriter company.

If the Burlingame machine is never used for long distance transmission, if it is never used to take the place of the Morse key, even then it would require from 500,000 to 1,000,000 machines to fill the needs of the commercial world. Just think of it: With the Burlingame, every business office would become a telegraph office. Every office equipped with a Burlingame machine would become an auxiliary, a feeder of the trunk lines of the telegraph companies. On the buzzer wire that calls the messenger boy you could attach the Burlingame and it immediately would connect with the main office of the telegraph company for the sending and receiving of messages. Banks, wholesale houses, department stores, commission merchants, stock brokers, the shipping world, mines, factories, hotels—in fact, every avenue of commerce would become a part of the telegraph system of the country by the use of the Burlingame machine.

For the benefit of those who wish to inquire into this remarkable invention and to learn the details of the offer under which the stock is now on the market, A. A. Shephard, resident agent, will explain to all who call on him at the Missoula hotel the complete facts in connection with the enterprise. Mr. Shephard will be pleased to call upon any Missoula people who are interested if a call is sent to him at the Missoula.

FISHER FOLK DISLIKE PECULIAR FUNERAL

London, Sept. 23.—Fulfillment of the extraordinary instructions left by John Davidson, the famous poet, that he should be buried in the sea off the Cornwall coast, nearly caused a riot among the simple fisher folk at Mousehole, where he had lived. They made objection to this form of burial, especially as the coffin was to be cast into the sea without any service. No boat could be secured at Mousehole to take the body out to sea, so it was removed to Penzance, whence the coffin in a lifeboat was towed 10 miles out, and a clergyman read the service before it was committed to the deep.

PREVENTS A SUICIDE.

Special to The Daily Missoulian.
Wallace, Sept. 23.—Harry Fritch, a waiter, under arrest for a crime alleged to have been committed in Missoula, this morning prevented Mike Roach from hanging himself in his cell. Roach tied a piece of leather about a beam in the cell and then around his neck and was strangling himself, when Fritch saw him and rescued him. Fritch was taken back to Missoula tonight. Roach is alleged to be insane.

RECEPTION PROGRAM ARRANGED

PLANS ARE COMPLETED FOR ENTERTAINING JAMES J. HILL AT HELENA FAIR.

Helena, Sept. 23.—The program for the reception and entertainment of James J. Hill, chairman of the board of directors of the Great Northern Railway company, was arranged today. Mr. Hill will be here next Monday, the first day of the seventh annual state fair, and he will deliver one of his noted "fair talks." Thomas A. Marlow, president of the National Bank of Montana, is in charge of the arrangements for the Hill party, as it was through his endeavors that Mr. Hill is coming here.

A special train, consisting of a coach and engine, will leave the Montana central depot at 7:30 Monday morning, having aboard 20 prominent citizens, who will meet the Hill special at Wolf Creek and escort the party to Helena. The Boston & Montana band will also accompany the committee. The train will be switched to the fairgrounds spur upon its arrival between 10 and 10:30, and the visitors will be escorted through the exhibition building. It is expected that an hour and a half will be spent looking over the displays, and then the party will proceed to the Montana club, where a luncheon will be tendered Mr. Hill between 12 and 1 o'clock.

Returning to the grounds, Mr. Hill will deliver his address, beginning about 2 o'clock. The Traft presidential party is due at the grounds about 2:30 and Mr. Hill will join it there and will be in the automobile procession when the president comes to Helena on his way to his train at the station. It is understood that Mr. Hill's train will leave here Monday evening for Minot, where he is to speak Tuesday. He comes to Helena directly from St. Paul.

OLD WOMAN SECURES HALF OF BIG ESTATE

Pittsburg, Pa., Sept. 23.—Because in January, 1941, she declined to promise to "obey," Mary E. Torrance, nee Powers, was deserted at the altar after the marriage ceremony had been performed making her the wife of James Torrance. After almost 68 years Mrs. Laura Speer of Elizabeth township proved to the satisfaction of the orphans' court at Pittsburg yesterday that she is the child that was born of this strange marriage, and the court awarded her half of the estate of her father, James Torrance, who died worth \$1,000,000 many years ago.

It was not until Mrs. Speer produced lockets which had been exchanged between her mother and father almost 70 years ago that the court was convinced and ordered that half the estate be given to Mrs. Speer, who is now gray-haired and tottering.

FAR-EASTERN CHIEF IS GIVEN OVATION

Tokio, Sept. 23.—Ransford S. Miller, Jr., newly appointed chief of the recently created division of far-eastern affairs of the state department of the United States, was given an informal, but warm, farewell when he left this city for Korea today. The affair was spontaneous evidence of the popularity of foreigners among the Japanese. Miller's services as Japanese secretary and interpreter for the American embassy here has given him a wide acquaintance among people of all classes.

GENERAL REYES PLANS TO PULL UP STAKES

Monterey, Mex., Sept. 23.—It is rumored here that General Bernardo Reyes, governor of this state, is about to leave Mexico, and has offered his residence for sale for \$50,000, and has resigned the presidency of the local casino, the highest social position in the state. It is not believed, however, that he will leave the state until after the elections, as he is said to seek the election of a lieutenant as governor. It is believed that he will go to Europe.

ROOMER IS KILLED WHEN HOTEL BURNS

Twin Falls, Idaho, Sept. 23.—The Eureka hotel, a two-story frame building burned at Twin Falls at 5 o'clock this morning. Andrew Rittner, roomer, 46 years old, formerly of St. Joseph, Mo., was instantly killed by falling while trying to re-enter the building to recover some money he had overlooked. It is believed that the fire was caused by a gasoline explosion.

CATHOLICS MEET.

Quebec, Sept. 23.—The first penary council ever held in Canada by the Roman Catholic church and the most important conference of prelates of that denomination ever called together in this country, is in session here this week. The sessions are being presided over by Mgr. Sbarretti, the papal legate, and the deliberations include subjects of great interest to the church at large.

If You Know Anything You Know This

There is no finer residence city than Missoula, and in Missoula there is no finer residence district than HAMMOND ADDITION. We make this statement fully realizing that it is broad, but we are prepared to back it up. We can show you if you will give us the chance. All you have to do is to call at our office and we will take you to the addition; there you can see for yourself. And bear this always in mind—we are offering these lots, with all this year's advantages, at last year's prices.

Lots \$400 to \$600

Terms—10 per cent down and 5 per cent a month, or one-fourth down and the balance in four, eight and twelve months at 6 per cent interest.

South Missoula Land Co.

FRANK P. KEITH, Secretary.
103 Higgins Avenue Missoula, Mont.

A BARGAIN SALE ON SATURDAY, SEPTEMBER 25 The Evans Bros. Trunk Co.

Will have a sale of their newly-made trunks. Free bus ride to and from the factory, corner Grant and South Eleventh streets west, Daily addition.
