

DR. DODD WILL REMAIN UNTIL THURSDAY, NOV. 4

Was Unable to Examine More Than Half of Those Who Called Last Week

HIS OFFICE IN THE SAVOY HOTEL WAS CROWDED

Two Out-of-Town Patients, Who Are Here to Consult Him—Wait Over, and Many Others Plead for Appointments This Week—Some Testimonials Follows

Mr. F. E. Riley, a railroad man living at corner of Monroe and Locust streets, says: "We took our son to Dr. Dodd last April. His eyes were crossed very bad and he was extremely nervous and sickly. He had been wearing glasses for some time, but they did him no apparent good. Dr.

Dodd fitted his eyes and they were perfectly straight after a few days wearing his glasses, his health improved and his eyes have developed until one who saw him with his former glasses would not recognize him now. We would have had an operation on his throat long ago, as we had been advised that one was necessary, only with other sickness in the family I did not feel able, but now his throat trouble and catarrh is practically cured and he is in better health than he ever was. His eyes are perfectly straight and he never has headaches any more. Last week my wife was fitted by Dr. Dodd and the benefit she has already experienced is simply wonderful. We are both anxious to tell you one all about our son's case, which proves beyond doubt that Dr. Dodd does all he claims to do, and my wife and I have given him permission to publish this testimonial.

"F. E. RILEY."

our daughter to see you at this time. The glasses you fitted her last April have cured her completely of St. Vitus dance, and as her eyes seem all right and she never complains of headache or any other trouble, we feel that to bring her would only be an unnecessary expense. We can never tell you how much we appreciate what you have done for her and we always tell everybody about you.

"MRS. A. F. JOHNSON."

Mr. Hanson of Wallace, Idaho, writes acknowledging receipt of his glasses and says: "I have worn my glasses constantly and besides experiencing complete relief from headache and dizziness the convenience of being able to see far and near with the one pair makes them doubly valuable. I had been compelled to wear two pairs for years until I got these, and I always found when I worst needed my reading glasses that I had left them at home or lost them. If these glasses continue to be as good and serviceable as they have been so far, I would not trade them off for a gold mine."

"Very truly,
"A. R. HANSON."

This child's eyes were straightened by Dr. Dodd in three days. Proper glasses did the work and saved her parents the expense and risk following such criminal operations. Closed ducts and all nervous diseases are cured by Dr. Dodd without knife or drug.

a large manufacturing firm," and, without doubt, one using benzoate of soda. They were conducted along lines formulated by an agency of the benzoate users, and it is charged that Dr. Long was induced to make the experiments by the same party who raised off a fake news item on the Associated Press in Washington recently. It is probable that the same agency was responsible for an editorial in a Denver newspaper several days before the convention suggesting such an experiment as Dr. Long conducted, for since he reported his statements have been widely exploited by this agency. As Dr. Long's experiments in no way resembled the process of manufacturing ketchup commercially it is proper to consider his conclusion that "benzoate of soda cannot conceal inferiority," as that of an expert appearing in behalf of the drug.

Charge Made. The charge was made on the floor of the convention that ketchup factory "garbage" was being utilized in the manufacture of ketchup, which charge Dr. Long undertook to refute. Instead of dealing with actual conditions, or making a personal investigation, however, he reported that he had made an experiment with a "mass of rotten tomatoes," furnished by his manufacturing friends, to which he added some rotten peaches, apples and bananas, collected by himself. Part of this material he undertook to make into ketchup, adding the necessary vinegar, sugar and spices; part he preserved with benzoate of soda, and part he allowed to continue to rot. He found the first more palatable. But as benzoate of soda ketchup is made with vinegar, sugar and spices and Dr. Long did not use the conditions with his benzoate it is evident that no basis for fair comparison was obtained. Consequently his experiments could by no chance add anything to the scientific knowledge of the subject or have any bearing on the practical use of benzoate of soda in preserving commercial condimental foods. Yet they have been utilized to mislead the public.

In direct opposition to Dr. Long's conclusions are the reports of Dr. A. W. Bittling, of the bureau of chemistry of the department of agriculture, as to what he found in the ketchup industry when he investigated it about a year ago. Dr. Bittling reported:

Great Bulk. In contrast with the strictly high-grade product is the great bulk of the ketchup found on the market. The material is not whole ripe tomatoes, but consists of the waste of the canning factory, commonly designated as "trimming stock" including the green, moldy, broken, rotten, and generally

unusable tomatoes, the skins, cores and stems from the peeling tables, and the surplus juice from the filling machines, all of which may be allowed to stand during the day and be run through the cyclone in the evening. At the end of the season the frosted and half-ripe fruit may be used. Part of this material cannot be considered "sound fruit" as contemplated by the food and drug act. The pulp is put up in barrels, preserved, and allowed to stand possibly in the sun, until a sufficient quantity has accumulated for shipment. Old ketchup barrels may be used and be none too clean. As a result it is not uncommon to see an inch or more of pulp in the bottom of a car at the end of shipment, caused by the blowing out of the barrel heads from fermentation. The sanitary condition of the factory may be poor, the handling of the goods be unclean, the spices be the refuse from the spice houses, the sugar be of the cheapest grade and the bottles only rinsed or be used without even the precaution. The ketchup is a concoction so heavily spiced with hot spices that the tomato flavor is lost and might as well be anything else. The color is normally dirty brown."

How It Is Done. The divergence between Dr. Long's report that benzoate of soda cannot be used to conceal inferiority and Dr. Bittling's statement of conditions as he found them, is so wide and startling that the writer undertook a personal investigation. He found conditions precisely as described by Dr. Bittling. The process of making pulp begins with the peeling of the tomatoes. They are placed in wire baskets and plunged into boiling water to loosen the skins. The "peelers" are given a bucket of the steamed tomatoes. With their left hand they cut out the core, green and rotten parts. When the tomato is "trimmed," it is tossed into a bucket which goes to the filling machine. The waste is thrown into a bucket on the floor, together with any tomatoes too rotten or too green for canning. This material, which is surely garbage, is gathered up, run through a cyclone to reduce it to a pulp and to remove the skins and such hard parts as will not squish up, stewed to the proper consistency and run into barrels.

It is then preserved with benzoate of soda and shipped to ketchup manufacturers. The amount of benzoate of soda used depends, the writer was informed, on the season and the point of destination, hot weather requiring that more of the preservative be used. He was also informed that the stuff would keep indefinitely and could be worked up into ketchup through the winter. The writer was forcibly impressed with the labor conditions, men, women and children, of all ages, white, black, and Poles, were employed and as the garbage passing through their hands was destined to eventually find its way to the table in ketchup preserved with benzoate of soda, an investigation into the quarters for living and eating was made. At the largest factory we visited, where 100 or more barrels were sitting in the sun waiting for their load of pulp, we found some 80 to 100 Poles, men, women and children, housed in a long shed divided into seven or eight sleeping compartments. Each compartment contained an enclosed sleeping room and a partially enclosed place to eat. The cooking was done in the fields, along with the family washing. The only toilet facilities provided consisted of a small outhouse. Files visited the camp and pulp factory impartially. A number of photographs were taken of this camp which is situated right in the town of several thousand inhabitants. Photographs were also taken of the number of other camps, the conditions of which is intolerable, as well as of carts hauling garbage, workmen and women and others showing the conditions found. An especially good one shows a young Polish working girl in rubber boots and leather apron, covered with filth.

From the results of his investigation, which were most carefully made and during which he was accompanied by a competent witness, the writer is prepared to state that there can be no question that benzoate of soda is used to "conceal inferiority," and that Dr. Bittling's report on the same is fully justified.

DREAM OF BOGUS HEIR NOW FINALLY OVER

Special to The Daily Missoulian. Helena, Mont., Oct. 30.—The final chapter in the history of Peter Bensel, who posed as the heir to a \$50,000 fortune, and on the strength of it bought a thousand dollars' worth of goods on credit and secured social prestige, was enacted here today when Bensel's effects, which he left behind when he fled from the city, were sold at auction to satisfy his creditors.

THAT DOUBLE CHIN.

Every woman who is fat, and especially every woman (or man) who has a hog-like double chin, will welcome this news paragraph. Your night masks and sticking plaster strips and strokings are at an end. A method of reducing double chins (also at abdomen and hips, shoulders, ankles and neck), that really does reduce them, has been found. And would you believe it, it is nothing more than a simple, harmless home receipt that any druggist will fill for you, viz: One-half ounce Marmola, one-half ounce Fluid Extract Cascara Aromatica, and three and one-half ounces Peppermint Water, a teaspoonful of which after each meal and at bedtime will take off up to a pound of fat a day. Try it—it is good for the stomach—strengthens that organ—so it turns the food into energy, bones, muscle, as it should, instead of into fat, as yours is doing now; drop exercising; eat what you wish; drop exercising; be lazy even; this mixture will still trim up your figure. And it will do it evenly, too, without causing wrinkles; removing the soggy fat, such as about neck and stout abdomen are made of, first.

MOVING OF LAUNDRY SHOWS GROWTH OF THE DAY

NEW HOME OF LOCAL ESTABLISHMENT IS MODERN AND WELL EQUIPPED.

The opening of the new premises of the Florence steam laundry, at the corner of Patte and Front streets, is another indication of the growth of Missoula as a commercial center. This will take place next week. Up until the present, the laundry has been located on Front street, next to the Florence hotel, but increase of business has necessitated a change to larger and more suitable quarters. The company will occupy two floors at the corner above mentioned, with an area of 130 by 45 feet on the one floor and 120 by 58 feet on the other. The place is roomy, well-lighted and well-ventilated, and is equipped with modern machinery, all of which is entirely new. This machinery has been furnished by the American Laundry Machine company, and its installation has been superintended by A. A. Howard, the laundry's manager.

Situated in front, in full view of the public, are the collar and cuff making machines—five in number. The ironing is done by the mediums of steam and pressure, minimizing the chances of any wear of the material. A special ironing machine, to be used for household linens, is the largest in the west, and the rotary method being its distinguishing feature, the goods will come out with an appearance as if new, and without any damage to the fabric in the process. In connection with this machine, it may be stated that its capacity per day is 10,000 pieces, or 1,000 per hour. The establishment is fitted with automatic drying closets, which are capable of drying 365 shirts in 32 minutes, representing more than double the present output. By the introduction of a system of individual motors for the machines, there is neither belt nor pulley to be seen, and the whole aspect of the place suggests the modern and hygienic.

With the occupation of the new premises, the laundry company will be in a position to cope with its present business, as well as meet the increased business which Missoula's growth is bringing. The present staff of employees numbers 32; there are three delivery wagons in daily use, and the agencies of the company in Missoula and district number 26.

ADVERTISED LETTER LIST.

Letters remaining unclaimed in the Missoula postoffice for the week ending October 24, 1909. When calling for any of these letters, please give date of publication. One cent due for advertising.

TRAIN IS DERAILED.

Chillicothe, Mo., Oct. 29.—Passenger train No. 1 on the Wabash railway, bound from St. Louis to Omaha, was derailed 12 miles west of Patonsburg, Mo., early today. A dozen persons were reported injured, none dangerously, it is said.

"Can be depended upon" is an expression we all like to hear, and when it is used in connection with Chamberlain's Colic, Cholera and Diarrhoea Remedy it means that it never fails to cure diarrhoea, dysentery or bowel complaints. It is pleasant to take and equally valuable for children and adults. Sold by all druggists.

subjected to selling pressure all day. Following declines ranging from 1/4 to 1/2c at the start prices moved within narrow limits, December selling between \$1.05 and \$1.05 1/2. The market closed weak and at almost the bottom.

Oats was dull and easy. Prices at the close were unchanged to 1/2c lower. Provisions closed easy, unchanged, to 1/2c lower.

Metall Markets.

New York, Oct. 30.—With both the New York and London metal exchanges closed the markets were practically nominal. Tin, \$30.25@30.50; copper dull, lake, \$12.87 1/2@13; electrolytic, \$12.50@12.75; casting, \$12.37 1/2@12.62 1/2.

Lead Quoted, \$4.32 1/2@4.40; spelter, \$6.40@6.55.

OBJECT TO ENTERING THE CADET CORPS

Spokane, Oct. 30.—Fearing that at some time they may be called upon to take up arms against their native country, more than a dozen alien students of the Washington state college at Pullman have petitioned that they be not required to enroll in the military department of the school. The petitioners, who include two Englishmen, two Scotchmen, a native of Indiana and a half dozen Japanese, assert that under the present law enrollment in the cadet corps would make them subject to service in the United States army, in case of war. The faculty has not yet ruled on the petition.

NINE LIVES LOST.

St. Johnsbury, Vt., Oct. 30.—Nine lives are known to have been lost in the fire that practically destroyed the Citizens' Savings Bank building here today. Two persons were killed by falling from upper floor windows during our late bereavement.

CARD OF THANKS.

We desire to express our sincerest gratitude for the kindness and sympathy of our friends and neighbors during our late bereavement.

MR. AND MRS. GASPARD DESCHAMPS.

AFFIRMS CONVICTION.

Helena, Oct. 30.—The supreme court today affirmed the conviction of A. L. Pemberton of Powell county on a robbery charge and sentenced him to seven years in the penitentiary.

VERY POOR SHOWING IS MADE

WILLIAM WOLFF SMITH TELLS OF MOVE OF USERS OF BENZOATE OF SODA.

(By William Wolff Smith).

Washington, D. C., Oct. 30.—In order to satisfy himself as to the truth of the charge that "canning factory garbage" is worked up into tomato pulp and preserved with benzoate of soda, to be later manufactured into ketchup, the writer recently visited a number of tomato-canning factories. He found that this waste material is so utilized and by means of the chemical preservative.

At the Denver convention of the State Dairy and Food departments in August, Dr. John H. Long, of the Northwestern university, a member of the Remsen board, gave what purported to be the history of an experiment in making ketchup with and without benzoate of soda. Some remarkable facts appearing in this connection have excited comment. Dr. Long stated that the experiments were undertaken "at the request of

No use arguing with the little snowbird. It knows that winter is here. Let us fit you out with warm goods, underwear, Sox, suits, overcoats and everything that men wear.
