### TRYING TO FATHOM BRANDT CASE

New York, Feb. 10.—Determined to get to the bottom of the case of Foulke E. Brandt, the former valet of Mortimer L. Schiff, who alleges that he pleaded guilty to charges of which he was not guilty and was sentenced to 30 years in prison, District Attorney Whitman today left for Washington for further investigation of the case. The district attorney refused to discuss his plans, but it was learned that he proposed to consult in Washington with United States Senator Knute Nelson of Minnesota. Senator Nelson is said to have received 10 letters from Brandt since the latter began his sentence five years ago, and has taken interest in the case because both are of Scandinavian parentage.

### NOTES OF MINING

Spokane, Feb. 10.—Idaho Continental Mining company has decided to equip the 23-mile road now under construction from Fort Hill, Idaho, to its property near the Canadian line, as a narrow-gauge line. The special committee on ways and means is composed of A. Klockman, president; Frank T. Post, director, and Frederick Burbridge, consulting engineer. The last named says in a report there is a sufficient ore tonnage in sight to justify such facilities. (Robert N. Bell, state mine inspector

of Idaho, says in his annual report just issued that the mine shows a reserve of practically measurable ore amounting to 175,000 tons, which, by extensive and careful sampling, is shown to average 14 per cent lead, with five and three-quarter ounces of silver to the ton, and probable ore that may quite safely be anticipated with additional adits amounting to 145,000 tons, adding: "This is one of the strongest and most persistent manifestations of lead-silver ore at the surface that has been found in Idaho and occurs in a close succession of definite shoots for nearly 3,000 feet on the strike of the vein, which is a nearly vertical and intensely sheared fissure in quartzite and shows every evidence of persistency to great depth. The ore is a fairly coarse galena, free from zinc, and maintains its sulphide condition almost to the grass roots. The mine has a shipping record of 1,200 tons of hand-sorted ore that averaged 45 per cent lead and 18.5 silver to the ton."

The Stewart Mining company, owned by F. Augustus Heinze, has started construction work on the tramway from the new tunnel on Deadwood road and Navigation company's tracks, gulch to the Oregon-Washington Railroad west of the Bunker Hill and Sullivan mine. The tram will be operated by gravity to carry the loaded cars to the bins, now under construction. The ore body encountered is the same as lower tunnel has been followed more than 100 feet, and continues to show excellent milling ore. Mining men at Kellogg are not yet positive that the ore body encountered is the same as that found in the upper workings, and many express the belief that a new vein has been struck. It is for the purpose of proving this theory that the company is continuing its tunnel. Official announcement is made that the Carbonate Hill Mining company, at Carbonate Hill, Idaho, which has expended \$29,500 on development work since March, 1910, will ship ore to the smelter as soon as the snow goes off. Nineteen hundred and eighty

feet of tunnel work has been completed. After drifting 300 feet from the portal of the tunnel a body of zinc ore, mixed with galena, was encountered. The chute was six feet wide. A drift of 150 feet was run on this chute, when the ore body increased to 19 feet, the zinc disappearing and the galena increasing proportionately. Average samples gave a value of \$14 to the ton. Fifty feet west of this point quartzite was found carrying galena ore with little zinc, the width of the chute being about 23 feet, 10 of which is mixed ore containing good milling and some shipping ore, the other 13 feet being good shipping ore. M. Baumgartner of Spokane, president of the Linton Mining company in the Coeur d'Alenes, reports that work on the east drift in the lower workings is progressing rapidly, adding that the showing in the face of the drift is better than he anticipated. Every precaution has been taken to guard against interruption of development work as a result of high water

in the mountains. Mr. Baumgartner said that 50 new claims have been located in the Big creek section this season, and, he added, judging from the general activity in Big creek, Gardner-Kellogg and Pine creek these sections will enjoy a year of prosperity. Shipping of concentrates from the 150-ton mill, to be started on the Knickerbocker mine, 11 miles from Wallace, Idaho, in March, will go forward soon afterward. The Idaho Knickerbocker Mines company, controlled by C. Vander Zwaal and associates of Spokane, owns 14 claims on which during the last few years more than \$200,000 has been expended in development work. In the main tunnel an ore body, 500 feet in length and 200 feet in height, varying from 10 to 25 feet in width, has been opened. In one part of the tunnel a body of clean galena ore, four feet in width, is in sight, the values ranging from \$15 to \$20 a ton. William Anderson, manager of the Beicher mine on Beicher mountain,

half way between Republic, Wash., and Grand Forks, B. C., owned principally by Spokane investors, reports that an ore shoot, 15 feet in width, carrying copper values averaging from 3 to 13 per cent, has been opened on the 110-foot level. The property is developed with three tunnels, all in ore. The mine is equipped with an air compressor and is producing and shipping at the rate of 50 tons a day. Robert J. Maclean, secretary of the Spokane Chamber of Commerce, has advised Secretary Callbreath of the American Mining congress that a guarantee fund of \$5,000 has been subscribed to bring the 1912 convention to this city the latter part of November. A formal invitation also has been forwarded. Five thousand dollars additional will be raised by public subscription, in the event Spokane is chosen, to entertain the delegates on a trip to the principal mines in the Coeur d'Alenes in northern Idaho, Republic camp in eastern Washington and the Slovan district in British Columbia.
