

HIS JOY IN LIFE WAS WORK, EARL'S REPLY TO WIFE

Denies Charge in Divorce Suit of Former Irma Leigh That He Was Idler.

GIVES LIST OF TASKS.

Sequel to Elopement From Dinner Party—He is a Nephew of Princess.

Operated a moving picture machine for several weeks. Repaired yachts and automobiles. Opened and managed a garage. Studied and worked many months "in the grime" of a machine shop to learn engineering.

Patented several devices of value to autoists. Perfected a number of other devices of even greater value.

Is operating manager of a big South Jersey district of the American Gas Machine Co., and

In his leisure hours worked a small farm connected with his bungalow.

His toil-acquired hand pointing to this roster of past and present effort, Binney Woodward Earl, nephew of the Princess of Camporese and son of one of South New Jersey's aristocratic families, repudiated today at his home in Edgewater Park, N. J., the imputation of his divorce-seeking wife that he is the "unworked son of a mother who regards labor as degrading."

Mrs. Earl, whose father is manager of the Jersey division of Armour & Co., was Miss Irma Leigh, and they ran off from a dinner party to get married about a year after Earl had been arrested for eloping with Mrs. William Cook. She charges, besides unfaithfulness and the contempt which, she says, her mother-in-law entertains for her

plebeian origin, that whenever Earl gave indications of a desire to earn his bread by the sweat of his brow that his mother, Mrs. Frank W. Earl, prevented him because she regards work as disgraceful and humiliating.

SAYS HIS GREATEST JOY WAS IN WORKING. "It is a lie that I never work," Earl declared today. "The only reason I am not holding down a steady job is because of my health. I have studied and worked at mechanical engineering since I was a boy. I can't understand the man who does not want to work. I got my greatest joy in life by working and in the belief that what I was doing would permit me to add to the pleasures of my life. My love for her was the inspiration behind my work. I must work now to forget my troubles."

Then he told of his past and present occupations, all of which he had undertaken to add to his \$250 allowance. "But she refused to show any interest in her home and did not appreciate any effort I made to increase her comfort and pleasure," he said. "I know of no sacrifice too great to lay on the altar of love, and I have even ignored invitations to social fetes and extended pleasure trips because my wife would not accompany me. I love her still, and am willing to forget the unfounded charges she has made against me. Outside influences have been at work to poison my wife's mind with wicked lies."

What these "wicked lies" were, or who told them, he will not say until the case comes into court next month on Mrs. Earl's application for alimony.

MOTHER DENIES SHE THINKS LABOR DEGRADING. Mrs. Earl, indignantly denies that she regards labor as too degrading for her son. "I believe that every man should work and have a profession," she declares, "and I should be ashamed of my son if he was inclined to idle away his time."

A friend of the family gave some pathetic details of Earl's efforts to please his wife. "He gave up a trip around the world which was offered to him and his wife as a gift by his mother; he gave up plans for a winter in California, and a trip to the Italian court, to visit his aunt, the Princess, because traveling was distasteful to his wife, and he was planning to give up his home here because his wife wanted an apartment in Philadelphia. For over a year detectives, undoubtedly hired by his wife, have been watching him."

Mrs. Earl, after filing her suit at Trenton, dropped out of sight, and her relatives in Burlington, N. J., refuse to reveal her whereabouts.

Earl is a frequent co-laborer with the younger Edison, at the latter's workshop near Burlington, and he has patented an automatic slot machine which can be placed along the roadway and deliver any desired amount of gasoline for the proper coin.

The Modern Witch

By Eleanor Schorer

ELEVATOR CHAIN BREAKS; TWO MEN ARE INJURED.

Joseph Burns of No. 202 West Twenty-first street and Peter Spellman of No. 48 West Thirtieth street, both drivers, were severely injured today in the building of the Celler Terminal Warehouse and Bonding Company at Eleventh and Bonding streets.

elevator tore loose and piled on top of the two men.

When Surgeon Victor of the New York Hospital and Patrolman Masterson of the West Thirty-seventh street station arrived the two men were wedged under the elevator cover. It was impossible to extricate them and the surgeon and policeman were lowered down to them with ropes. They found Spellman probably mortally injured, with a fracture at the base of the spine. Burns was suffering from internal injuries and contusions, but he is likely to get well. It was an hour and a half before the injured men were lifted out and driven to the New York Hospital.

WHY MAN OF TO-DAY IS ONLY 50 PER CENT. EFFICIENT.

If one were to form an opinion from the number of helpful, inspiring and informing articles one sees in the public press and magazines, the purpose of which is to increase our efficiency, he must believe that the entire American nation is striving for such an end.

And this is so. The American Man because the race is swifter every day, competition is keener, and the stronger the man the greater his capacity to win. The stronger the man the stronger his will and brain and the greater his ability to match wits and win. The greater his confidence in himself the greater the confidence of other people in him; the keener his wit and the clearer his brain.

The American Woman because she must be competent to rear and manage the family and home and take all the thought and responsibility from the shoulders of the man, whose present day business burdens are all that he can carry.

Now what are we doing to secure that efficiency? Much mentally, some of us much physically, but what is the trouble? We are not really efficient more than half the time. Half the time blue and worried—all the time nervous—some of the time really incapacitated by illness.

There is a reason for this—a practical reason, one that has been known to physicians for quite a period and will be known to the entire world ere long.

That reason is that the human system does not, and will not, rid itself of all the waste which it accumulates under our present mode of living. No matter how regular we are, the food we eat and the sedentary lives we live (even though we do get some exercise) make it impossible; just as impossible as it is for the grate of a stove to rid itself of cinders.

And the waste does so exactly what the cinders do to the stove—make the fire burn low and inefficiently until enough cinders have accumulated, and then prevent its burning at all.

It has been our habit, after this waste has reduced our efficiency about 75 per cent., to drug ourselves, or after we have become 100 per cent. inefficient through illness to still further attempt to rid ourselves of it in the same way—by drugging.

If a clock is not cleaned once in a while it clogs up and stops; the same way with an engine because of the residue which it itself accumulates. To clean the clock you would not put acid on the parts, though you could probably find one that would do the work, nor to clean the engine would you force a cleaner through it that would injure its parts; yet that is the process you employ when you drug the system to rid it of waste.

You would clean your clock and engine with a harmless cleanser that Nature has provided, and you can do exactly the same for yourself, as we will demonstrate before we conclude.

The reason that a physician's first step in illness is to purge the system is that no medicine can take effect nor can the system work properly while the colon (large intestine) is clogged up. If the colon were not clogged up the chances are 10 to 1 that you would not have been ill at all.

It may take some time for the clogging process to reach the stage where it produces real illness, but no matter how long it takes, while it is going on the functions are not working so as to keep us up to "concert pitch." Our livers are sluggish, we are dull and heavy—slight or severe headaches come on, our sleep does not rest us—in short, we are about 60 per cent. efficient.

And if this condition progresses to where real illness develops, it is impossible to tell what form that illness will take, because—

The blood is constantly circulating through the colon and, taking up by ab-

sorption the poisons in the waste which it contains, it distributes them throughout the system and weakens it so that we are subject to whatever disease is most prevalent.

The nature of the illness depends on our own little weaknesses and what we are the least able to resist.

These facts are scientifically correct in every particular, and it has often surprised me that they are not more generally known and appreciated. All we have to do is to consider the treatment that we have received in illness to realize fully how it developed and the methods used to remove it.

So you see that not only is accumulated waste directly and constantly pulling down our efficiency by making our blood poor and our intellect dull, our spirits low and our ambitions weak, but it is responsible through its weakening and infecting processes for a list of illnesses that if catalogued here would seem almost unbelievable.

It is the direct and immediate cause of that very expensive and dangerous complaint—appendicitis.

If we can successfully eliminate the waste all our functions work properly and in accord—there are no poisons being taken up by the blood, so it is pure and imparts strength to every part of the body. Instead of weakness—there is nothing to clog up the system and make us bilious, dull and nervously fearful.

With everything working in perfect accord and without obstruction our brains are clear, our entire physical being is competent to respond quickly to every requirement, and we are 100 per cent. efficient.

Now this waste that we speak of cannot be thoroughly removed by drugs, but even if it could the effect of these drugs on the functions is very unnatural, and if continued becomes a periodical necessity.

Note the opinions of two of our eminent physicians—

Prof. Alonzo Clark, M. D., of the New York College of Physicians and Surgeons, says: "All of our curative agents are poisons, and, as a consequence, every dose diminishes the patient's vitality."

Professor Joseph M. Smith, M. D., of the same school, says: "All medicines which enter the circulation poison the blood in the same manner as do the poisons that produce disease."

Now, the internal organism can be kept as sweet and pure and clean as the external and by the same natural, sane method—bathing. By the proper system warm water can be introduced so that the colon is perfectly cleansed and kept pure. There is no violence in this process—it seems to be just a normal and natural act as washing one's hands.

Physicians are taking it up more widely and generally every day, and it seems as though every one should be informed thoroughly on a practice which though so rational and simple is revolutionary in its accomplishment.

This is rather a delicate subject to write of exhaustively in the public press, but Charles A. Tyrrell, M. D., has prepared an interesting treatise on "Why Man of To-Day is Only 50 Per Cent. Efficient," which treats the subject very exhaustively, and which he will send without cost to any one addressing him at No. 184 West Sixty-fifth street, New York, and mentioning that they have read this article in The World.

We are enthusiastic on Internal Bathing because we have seen what it has done in illness as well as in health, and we believe that every person who wishes to keep in as near a perfect condition as is humanly possible should at least be informed on this subject; he will also probably learn something about himself which he has never known through reading the little book to which we refer.

FOUND WIFE BRUTALLY BEATEN BY A BURGLAR.

Robber Left Woman Unconscious and Tied to a Bedpost in Her Room.

The police of the West street station, Williamsburg, are looking for a man who last night assaulted Mrs. Lena Femminella, nineteen years old, in her home at No. 1028 Metropolitan Avenue. The intruder struck her over the head, knocked her unconscious, tied her to a bedpost with her own clothes and fled with \$20, a gold watch and chain and two rings.

The man is described as about thirty years old, with black, curly hair, wearing a ribbon mask over part of the face, a soft gray hat, patent leather shoes and dark clothing.

Joseph Femminella, the woman's husband, told the police that the description given by his wife tallies with the general description of a man who courted her before she became Mrs. Femminella.

When Joseph Femminella returned at 9 o'clock, he found his wife semi-conscious in a bedroom. She was disfigured with an ugly scalp wound and another wound on the side of her face. Many yards of knotted clothesline tied her to the bedpost, and the room was in great disorder, the bedclothing disarranged and several chairs lying around the room. Femminella called Dr. Gonowia, a nearby resident, and the two resuscitated the woman.

Guard Against Tonsillitis, Diphtheria, Sore Throat, by gargling daily with Vernas Lotion

Has ten times the value of other antiseptics. Promptly overcomes and removes infection, inflammation, soreness. Its pleasant flavor appeals to old and young. 3 sizes, 15c., 50c., \$1.00. At druggists.
