

Fourteenth Regiment: 22 Paid; New State Force Again.
More than \$25,000 was paid yesterday to the one thousand members of the Fourteenth Regiment, Brooklyn, when that command was mustered out of the Federal service in the army. Fourteenth Street and Eighth Avenue. The men automatically again became members of the State militia.

AVOID ALL MEAT IF KIDNEYS AND BLADDER BOTHER

Uric Acid in meat excites Kidneys and irritates the Bladder.

Take Salts at first sign of Bladder weakness or Kidney-Backache.

Kidney and Bladder weakness result from uric acid, says a noted authority. The kidneys filter this acid from the blood and pass it on to the bladder, where it often remains to irritate and inflame, causing a burning, scalding sensation, or setting up an irritation at the neck of the bladder, obliging you to seek relief two or three times during the night. The sufferer is in constant dread, the water passes sometimes with a scalding sensation and is very profuse; again there is difficulty in voiding it.

Bladder weakness, most folks call it, because they can't control urination. While it is extremely annoying and sometimes very painful, this is really one of the most simple ailments to overcome. Get about four ounces of Jad Salts from your pharmacist and take a tablespoonful in a glass of water before breakfast, continue this for two or three days. This will neutralize the acids in the urine so it no longer is a source of irritation to the bladder and urinary organs, which then act normally again.

Jad Salts is inexpensive, harmless, and is made from the acid of grapes and lemon juice, combined with lithia, and is used by thousands of folks who are subject to urinary disorders caused by uric acid irritation. Jad Salts is splendid for kidneys and causes no bad effects whatever.

Here you have a pleasant, effervescent lithia-water drink which quickly relieves bladder trouble.—Advt.

Thomas Edisons in Embryo Show Their Brain-Children At the Electrical Show

Inventors in the Chrysalis Stage Get Their Chance to Win Fame and Prizes—Safety Appliances for Autos and for Bucolic Persons Who Blow Out the Gas on Exhibition at Grand Central Palace.

By Marguerite Mooers Marshall.

The eighth wonder of the world and the second Thomas A. Edison may be found by the Electrical Exposition which has just opened in the Grand Central Palace.

Wonder-working long ago proved itself almost the routine business of electricity. But wonder-working is just now on a new spurt. For Arthur Williams, President of the Electrical Show, has arranged for a prize competition for mute, inglorious inventors, and numbers of new patented but uncommercialized devices already have been submitted. The competition closes to-morrow night at midnight. All participants must show a working or other model which will illustrate the actual operation of their inventions, and gold, silver and bronze medals will be awarded to the three bits of apparatus most commercially practical.

"And all inventions that are worthy will be properly brought to the attention of those interested in their development," promises Mr. Williams. "In arranging this competition we have been influenced by the fact that many of the famous inventions which have contributed so much to electrical development have lain dormant for varying periods, some counted by years, and the progress of the modern world delayed correspondingly.

"Thomas A. Edison is among those who were greatly handicapped at the start through lack of an opportunity to secure proper recognition of their valuable inventions. I believe there are many brain-children of future Thomas A. Edisons which are virtually shelved because of the lack of an opportunity to present them. Our purpose is to discover and foster these."

BRAIN-CHILDREN OF THE EMBRYOTIC EDISONS.
And then I saw some of the newest brain-children. There was the show window on wheels, which, if it ever perambulates Broadway, will attract more followers than a procession of circus wagons.

Imagine a big platform, such as is used on floats, with glass sides and a glass roof. The corners are protected by elaborate moldings, and the platform is wide enough and its roof high enough to allow at least a dozen people to move about freely. The dozen will be there. They will be young and beautiful models—"perfect thirty-sixes"—and they will wear the new suits, coats, evening gowns and hats which the particular shop that has hired the walking window wishes to display to an eager world. The glass inclosed platform will be mounted on the strongest and silkiest of electric motor vehicles. It is guaranteed to be so slow that everybody will be able to take all the long, lingering looks she—or he—may crave. The apparatus is intended for the use of only one advertiser in any city and its vicinity, the youthful inventor explained to me. I felt certain that even one such chariot of the graces would necessitate an increase in the forces of the traffic corps, but it seemed unkind to dampen his enthusiasm with the suggestion. He also is showing a safety stopper for automobiles. It consists of two arrangements of glass and metal. One of these is in the shape of the American eagle, a circular disc on his breast and across it in big letters that may be illuminated by electric lights, "Safety First." This contrivance is to be attached to the front end of the automobile hood. The second part of the invention

consists of a metal disc similarly inscribed, with a metal hand, the forefinger outstretched, on either side of it. This is to be fastened to the back of the limousine, at the top. It is electrically illuminated with both red and white lights, the whole thing controlled by buttons in the interior of the car. "There would be no more automobile accidents," the inventor prophesied, bravely. "If this device were installed on all automobiles. The driver, if he wishes to turn to the right and there are several cars behind him, presses the button which illuminates the hand on the right side of his machine. Similarly he can illuminate the hand on the left side. The eagle light in front is for the tip of policemen." So you see, he has some money on the traffic corps!

SAFETY FOR THE MAN WHO BLOWS OUT THE GAS.
Another man has submitted a device calculated to save innocent country gentlemen from untimely death due to their blowing out the gas in hotel bedrooms. This contrivance consists of a small metal box which can be attached to the back of a picture frame. The instant there is any undue pressure of gas in the atmosphere of the room the delicate machinery in the little box registers the fact and sounds an electric alarm in the office of the hotel proprietor, who is thus enabled to send in a call for the policeman while he is sending other forms of first aid to the room whose number is indicated by a dial on the alarm.

A senior at the Yale Sheffield School has sent an ingenious electrical device for cleaning silver to the Electrical Exposition. There is a model showing a skillful arrangement of glass and metal shades over an elec-

tric light bulb to utilize all the power of the light. Another new invention greatly increases, it is announced, the efficiency of the electric car. There are plenty of other wonders at the show, not quite so new, but new to many people. There is the electric horse, which looks rather more like an ostrich, in the electrically fitted gymnasium. It is said that he gives all the sensations of a gallop in the park. Over in the department of household economies there is a motor-driven heater which really and truly restores silver locks to their original gold or brown. There, too, one finds an electric salad (or cocktail) mixer, a child's toy stove run by electricity, an electric machine guaranteed to wash spinach clean.

Also there is the sure solution of the servant problem—the electric cooker and graphophone combined. You put your roast beef and pudding in one little closet and press a button. Then, while the meat is cooking, there peals forth from the cooker the latest Hawaiian love song or hitting fox trot. This is the very newest thing in dinner-dances!

MR. GERRARD'S!
A white dove, wearing on its leg a gold ring marked "U-53" has been captured at Edgewater, N. J.

Maxwell's Leave Extended.
The Board of Education yesterday extended for six months the leave of absence, with pay, granted to Dr. William H. Maxwell, City Superintendent of schools, who is ill. A leave of eight months, granted Jan. 25, expired yesterday.

RESINOL PROVED. WONDERFUL FOR ITCHING ECZEMA

Feb. 23.—"I had a chronic case of eczema on my hands for about three years. It got red in places, especially between my fingers, and when I'd rub them a little, pimples or blisters would form which filled with water. The longer I had this trouble, the larger these pimples got. I can't express in words what a terrible thing it was. I couldn't find anything to help me—everything seemed to make it worse. I had about given up all hope of ever being cured. They were terribly sore and I could not sleep for the terrible itching and burning. I learned of Resinol Ointment and Resinol Soap and decided to try them. Well, Resinol really proved to be a wonderful thing in my case. It relieved at the first application. I used about a cake of Resinol Soap and half a jar of Resinol Ointment and the eczema was all gone. It hasn't returned since. I am so glad I tried Resinol Ointment and Resinol Soap, as I do not know how I could have stood that eczema much longer. It is a cheap and sure cure. (Signed) Mrs. H. H. Denov, Sioux Falls, S. D."

All druggists sell Resinol Ointment and Resinol Soap. For samples free write to Dept. 7-S, Resinol, Baltimore.—Advt.

IN WANAMAKERS NEW YORK

New Down-Stairs Store

As This Serge Frock is Semi-Made, It is Only \$7.95
Sizes 14, 16, 18 and 20 years

As each frock required 4 yards of serge, and as we have used our \$1.50 quality of serge, it is obvious that the price of the semi-made frocks, \$7.95, is very little.

The serge is a fine firmly woven quality—in

Navy Blue Purple
Black Dark Green
Burgundy Seal Brown

Large collar and cuffs are fashioned of our \$2 quality of fine white flannel.

Note please—Although these frocks are semi-made, they are easily completed—simply finish the front seam, put in the hem, fasten the collar, cuffs and belt.

Dress Goods Shop, New Building

Underwear and Hosiery—New
