

THE WORLD OF LONDON.

CHRONICLED AND CRITICISED BY MR. ED- MUND YATES.

INDICULOUS RUMORS ABOUT PRINCESS CHRIS- TIAN—AMERICAN BEAUTIES AT HOMBURG.

—LORD LANDSDOWNE'S KERRY WEL- COME — EDISON'S ENTERTAINMENT—SPANISH SCENES IN A NEW PLAY.

BY CALLER TO THE TRIBUNE.

Princess Christian becoming a Roman Catholic is so ridiculously untrue that it seems hardly worth notic- ing, yet such rumors, when they go abroad, are largely credited and ultimately accepted as facts.

The Princess is one of the National Church, and one of its most ardent and tried friends. None of our Royal family is more interested in all work pertaining to the Church.

She is practical and zealous in her assistance to the poor of London, and is always known as "the Princess." Her frequent public visits there are occasions of ceremonial, when she goes to open hospitals and inaugurate any work in which she takes an interest, making her appearance familiar to the poor classes of London.

Her husband is best known and beloved in England as the Duke of Edinburgh, where he goes regularly when in England to visit the works and read to patients. Her kind and gentle voice have soothed many a sufferer independently of more practical help which she follows up the fortunes of those who are leaving the hospital need assistance.

A NEW THEORY OF THE ARYAN RACE.

ITS ORIGIN AND PROGRESS DISCUSSED.

DR. HALE'S PAPER BEFORE THE AMERICAN ASSO- CIATION FOR THE ADVANCEMENT OF SCIENCE.

—OTHER NOTABLE PAPERS READ.

By the call of the Association for the Advancement of Science, August 20 (Special).—The reading of papers before the American Association for the Advancement of Science was resumed this morning.

Dr. P. E. Salmon read a paper on "The Discovery of the Production of Immunity from Contagious Diseases by Chemical Substances Formed during Bacterial Multiplication." It demonstrated that immunity may be secured by the injection of soluble substances which result from the growth of pathogenic bacteria.

His experiments were made with the virus of cholera. It is hoped, however, that similar results may be secured with the virus of other diseases, and thus afford a valuable means of prophylaxis.

In these experiments Dr. Salmon anticipated Pasteur. Horatio Hale, of Canada, enlightened the Anthropological Section on "The Origin and Character of the Aryan Race." From the time when the identity of this race was first recognized, it was taken for granted that the origin was in Asia, and that the Aryans advanced the history of European origin.

Dr. Hale started with the premise laid down in his presidential address in 1886, that the language must have originated in a family of children left without parents and thrown upon their own resources, impelled to devise their own means of communication, and thus gradually forming a new language among themselves.

Such a family could have survived in only a mild climate and fertile country, such as no other part of the world affords. The only place that could eliminate the greater part of Asia after the problem and reduce the limits within which must be sought this original habitat to the plains of Persia and Bactria; and in this region the locality which best fulfills the hypothetical conditions is Deshpistan.

The primitive Aryans were of very moderate endowments, both moral and intellectual, though warlike. Primeval Europe seems to have been peopled by three races; in the southeast, the Semitic, southwest, the Iberian; and central and north, the Frisian. The Aryans entered and conquered these several races, and, becoming incorporated and amalgamated with them, gained the qualities lacking to form a well-balanced man-speaking, however, the language of the conquerors. These conclusions are sustained both by comparative philology and by physical characteristics. It is the admixture of these indigenous races which infused into European Aryans the progressive spirit which is lacking among other races.

The Aryans were secured by two causes, their worship of hereditary rank, which maintained national unity, and their cruelty to the conquered, which checked revolt at its birth.

Secretary Putnam followed with an account of "The Serpent Mound and its Surroundings," giving a report of the progress of the exploration of this mound, which is located about seventeen miles from Hillsboro, Ohio. The recent work has been largely of an exploratory nature, and has consisted of clearing the region into a park. Especial attention has been given to planting different kinds of native trees, so as to make an arborium. He has also restored part of the mound, by piling up stones in the position they were supposed to have occupied originally, and throwing back some earth which had been ploughed out. The large mound has been explored heretofore, but the excavations show that it is made of small neighboring mounds. Work will be resumed as soon as the association adjourns.

Dr. Britton read a paper on "Traits of Primitivity Speech." The Economic Section was occupied by papers on cremation by C. K. Remington, of Buffalo, and on "The International Statistical Institute" by J. R. Dodge.

Professor Harkness gave an account of the instruments and processes employed by the United States Geological Survey in determining the solar parallax from the transit of Venus which took place in December, 1882. The position angles were not placed in the sun, but from measurements of the distances between the centers of the sun and Venus, made upon 1,475 photographs taken at ten stations scattered over the United States, South Africa, South America and New Zealand, a parallax of 8.47 seconds, which corresponds to a distance of 92,355,000 miles between the earth and the sun, with a probable error of only 125,000 miles. These computations have been in progress ever since the data were collected, and represent an amount of labor equivalent to that of twenty-five men for one year. This is the first announcement yet made of the result, and is very valuable in connection with the astronomical observations.

Papers were read before the Geological Section by Professor Merden Hall, on "The Intensity of Earthquakes," with Approximate Calculations of the Energy Involved," by N. H. Winchell, on "Eruptive Rocks, with reference to those of Minnesota," by C. W. Sell, on "The Distribution of the Granites of the New England," and by L. C. Branner, on "The Geologic Age of the Crystalline Rocks of Arkansas." In the Chemical Section, Dr. J. H. Rose read a paper on "Some Modifications of the Methods of Organic Analysis by Combustion." Frank H. Morgan read one on "The Analysis of Organic Compounds by the Method of Dr. Atwater," on "The Chemistry of Yeast," and "The Quantities of Nitrogen in Protein Compounds." In the Canadian Section, Dr. J. H. Rose read a paper on "Efficiency of Indecent Literature."

The Association has pleasantly spent in an excursion to the private park of W. J. Gordon, and a reception by Mr. and Mrs. L. W. Holden, at their residence in the city. The Association will meet on Monday at the Hotel Hamilton, at 10 o'clock.

A sale of books, including many quaint and rare publications, is taking place mornings and afternoons of this week at the auction rooms of James & Co., No. 729 Broadway. The books are very old, and are being largely attended, and, indeed, it is said to be almost impossible to attract a large number to a book sale at this time of the year. Among the books sold were many early New-England Imprints, some of them printed in days of Cotton Mather and treating of the Salem witchcraft, while others were on various subjects of interest in colonial times. The collection includes a large number of books on numismatics, a large number of historical and reports of criminal trials, as well as many religious books. A few books of the latter class were sold yesterday, but the market was not particularly lively for this sort of literature. A fact charitably attributed to the warm weather.

GENERAL HARRISON'S TRIP TO PORTLAND. Indianapolis, Aug. 20 (Special).—General Harrison this morning decided to postpone his departure for Middle Bass Island until tomorrow, the change in plans having been made because it was found that he should go at the time fixed a stay at the hotel in Toledo would be longer than he would have had if he had gone on the 19th. He will leave here early tomorrow morning over the Lake Erie and reach Toledo in the evening. He will be accompanied by Mrs. Judge and Mrs. W. A. Woods, Samuel Miller, son of his law partner, and a private secretary, and probably also by his daughter. He will remain on the island at least two weeks.

ROBERT B. BOOSEVELT MARRIED IN LONDON. London, Aug. 19.—The newly appointed Minister to Holland, Robert B. Roosevelt, of New-York, will not have long to wait before he is married. He was married yesterday at the Church of Our Lady, Victoria, (Lapin), by the Very Rev. Edward O'Leary, vicar, Louis Davenport, to Mrs. Marion T. Fortescue, of New-York. A special dispensation from the Pope had been procured for the ceremony on the 19th.

SOME THINGS WORTH SEEING. From Garden and Forest. Those horticultural visitors to New-York this week who are interested in trees should make a point of seeing the Magnolia virginiana (Magnolia parviflora) at East River, which is the only one of its kind in Central Park, near the seventy-second-street entrance from Fifth-avenue, which was also brought to New-York from Florida. It is a very interesting tree, and the two most interesting exotic trees on Manhattan Island, and they have, of their kind, no equals in any of the United States or Europe. Prospect Park, too, in Brooklyn, should be visited. The public have a very inadequate idea of that park, and it is a pity that it is not more generally known. It is considered by good judges to be the best example of a large city park now existing. Horticultural visitors will find many rare and interesting trees. A specimen of the green-leaved Japanese maple (Acer polymorphum), near the restaurant, was so equal, perhaps, in the United States, in size. On

A CONVENTION OF FLORISTS.

MEETING TO-DAY TO DISCUSS THE GROWTH AND SALE OF PLANTS—A THREE-DAYS SESSION.

The Society of American Florists begin their fourth annual meeting at Niagara Hall to-day at 10 o'clock. The meeting will continue three days, with three sessions daily. On the fourth day the visitors will be the guests of the New-York Florists' Club, who will take them on an excursion and send them home in a state of complete satisfaction with themselves and everybody else.

The society is a national one, as its name implies. Its members come from all States in the Union and from Canada. Every argument and every plea will be presented, and there is probably not a flower growing on this broad continent that some member won't know something about. The president of the society, E. G. Hill, of Richmond, Ind., will make an address. Then will follow the reports of various committees, the morning session concluding with a discussion of the president's address. The programme for the afternoon session includes two essays—"The Elevation of Our Business," by H. H. Parley, of Philadelphia, and "The Future of the Florist's Business," by C. D. Hall, of Honesburg, Penn. The evening session of each day will be devoted to what is styled "The Question Box." It consists in answering all sorts of queries, conundrums and problems involved in the florist's business. Robert J. Halliday, of Baltimore, for instance, undertakes to answer the question "What is the best way to propagate Anacardium occidentale in the United States?" and John G. Gardner, of New J., where it may be presumed everybody knows the plant, will answer this query, "Can Ixoras and other flowering stove plants be grown so that flowers can be sold at a profit?" Altogether there are eleven questions in the box.

To-morrow morning the officers for the ensuing year will be elected and Thomas Cartledge, of Philadelphia, will consider "Roses, from the Retailer's Standpoint." In the afternoon Edward Lonsdale, of Chestnut Hill, Penn., will discuss them from the grower's standpoint. "The Florist's Country," the first of a series of papers on "The Florist's Country," will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature." Then "The Florist's Country," the first of a series of papers, will be discussed by J. H. Taylor, of Haysville, N. Y. J. D. Reynolds, of Riverside, Ill., will tell about "Modes of Heating and their Relative Cost of Construction and Operation," and Mr. Halliday, of Baltimore, will discuss upon "Nomenclature."
