

SUPERSTITION A DANGER

KING'S PHYSICIANS WISE IN NOT POSTPONING CORONATION, SAYS DR. CORNING.

It has been reported from London that the superstition entertained by King Edward that he will never be crowned is having so prejudicial an effect upon his mind as to cause his physicians to give reluctant consent to an early coronation...

"Is it a fact," he was asked, "that a superstition belief may exert so great a sway over the mind as is implied by this action on the part of the King's physicians?"

"First, the fact that a large percentage of human beings are unaccustomed to look searchingly into casual, untraced in logical method, strangers to the kind of reasoning that has brought to the race about all the knowledge it possesses...

"What are the conditions that favor the development of superstition?" "First, the fact that a large percentage of human beings are unaccustomed to look searchingly into casual, untraced in logical method, strangers to the kind of reasoning that has brought to the race about all the knowledge it possesses...

"The young farmers at the Ninety-ninth-st. playground have their land ploughed, fenced and planted. It is fenced with wet netting and planted with lettuce, radishes and other quick growing vegetables...

AGED CITY ENGINEER UNPAID

THE OLDEST MEMBER OF HIS PROFESSION, HIS NAME IS NOT ON PAYROLL.

Charles H. Haswell, the oldest practicing civil engineer in the world, who in a few months will celebrate his ninety-fourth birthday, has been working for the city ever since the first of the year without pay as consulting engineer of the Board of Estimate and Apportionment...

"The local commission," said Mayor Low yesterday to a Tribune reporter, "assumed that the assent of the State commission would have to be obtained before Mr. Haswell could be appointed as consulting engineer of the Board of Estimate and Apportionment."

"The hearing of the Interurban Street Railway Company, the holding company of the Metropolitan Street Railway Company, was asked to show cause why the line should not be declared a public nuisance, in so far as the use of storage battery cars on it was concerned...

AFRAID TO TELL TRUTH.

MANY DIE OF TUBERCULOSIS BECAUSE PHYSICIANS DO NOT WISH TO ALARM PATIENTS, SAYS DR. BIGGS.

"Tens of thousands of people die because their physicians have not the moral courage to say to them, 'This is tuberculosis, and now is the time to take precautions,'" said Dr. Herman M. Biggs, medical officer of the Health Department...

"When any one talks to you about chronic bronchitis and continued colds, be sure that in a majority of cases there is lack of the trouble a tuberculosis focus. When a cough continues for more than six or eight weeks, in a large majority of cases a tuberculosis focus is at the root of the matter."

"The source of danger is from the bacilli thrown out from the respiratory tract. In advanced cases of tuberculosis the bacilli are thrown out in a single day. These germs are inhaled as dust and lodge in different tracts in the system. If conditions are favorable to their growth they multiply there."

"But the general susceptibility to tuberculosis is very great. It is in fact at certain times and under certain conditions that a large proportion of people are susceptible. It is quite as true that a vast majority of the human race are susceptible to tuberculosis when, for instance, resistance is decreased through grip, overwork or run down conditions."

"The source of danger is from the bacilli thrown out from the respiratory tract. In advanced cases of tuberculosis the bacilli are thrown out in a single day. These germs are inhaled as dust and lodge in different tracts in the system. If conditions are favorable to their growth they multiply there."

THE ACID CARS A NUISANCE

COMMISSIONER LEDERLE ORDERS METROPOLITAN STREET RAILWAY TO ABATE IT ON THIRTY-FOURTH-ST.

At the end of a hearing yesterday Health Commissioner Lederle announced that the board had decided that the Metropolitan company's Thirty-fourth-st. crosstown storage battery cars were a public nuisance. He said that notice of the decision would be sent to the railroad company at once, and that it would receive five days in which to abate the nuisance.

The Commissioner was asked what steps would be taken to bring the company to terms if it should not abate the nuisance. While not committing himself to what would be done, Mr. Lederle said there were at least three courses which could be pursued. One was to obtain an injunction against the company restraining it from running the cars. Another would be for inspectors of the Board of Health to call a policeman and have a motorman arrested...

WHO IS TO BLAME?

DEATH OF A YOUNG GIRL CHARGED TO LAX SOCIAL STANDARDS.

In the light of the renewed campaign against tuberculosis, a touching memorial to "J. H. M.," by Edward T. Devine, in "Charities," of July 12, is significant. "J. H. M." was for ten years in the office of the Charity Commission, of which Mr. Devine is general secretary.

Struggle and suffering and disease and death have also their beneficent part to play in our human affairs. Reckless of individual lives, the young people who are the victims of the disease of tuberculosis, in the full bloom and beauty of life's springtime, science and public spirit may one day be able to prevent them from being victims of the disease of tuberculosis...

If it is now one of my own people whose untimely death I mourn, it is the little group of those who know her that is of no consequence except to us. She was not exalted in a splendid way above her fellows. For ten happy, weary years she worked in an office skillfully, steadily, bravely, for the maintenance of the office and the welfare of the people...

She died of a communicable, curable and preventable disease, and sixteen thousand died this year of the same disease. She was not exalted in a splendid way above her fellows. For ten happy, weary years she worked in an office skillfully, steadily, bravely, for the maintenance of the office and the welfare of the people...

HELD FOR VACCINATING CHILD.

BOARD OF HEALTH DOCTOR WHO DID IT AGAINST WISHES OF GIRL'S FATHER CHARGED WITH ASSAULT.

Because he vaccinated Irene Walsh, a pupil of Public School No. 44, without the consent of her parents, Dr. Edwin R. Bedford, of No. 514 Marcy-ave., Brooklyn, was held for the Court of Special Sessions on a charge of assault by Magistrate Furlong in the Gate-ave. police court yesterday. He was allowed to go on his own recognizance.

Willis T. Walsh, a well-to-do contractor, of No. 397 Hancock-st., the father of the girl, who is six years old, was opposed to her being vaccinated by Board of Health officers. He tried to get a certificate from the family physician, who had vaccinated the girl some time before. The certificate had not been received, however, on May 7, the day set by William McAndrew, the principal of the school, and Dr. Bedford, of the Board of Health, vaccinated the girl. Mr. Walsh then had both Mr. McAndrew and the doctor arrested. On the examination the principal was discharged and the decision in the doctor's case reserved until yesterday.

Justice Gaynor in a similar case in the Supreme Court recently held that the Board of Education had a right to enforce the rule that all children in the public schools should be vaccinated.

Justice Gaynor in a similar case in the Supreme Court recently held that the Board of Education had a right to enforce the rule that all children in the public schools should be vaccinated.

THE KUNZ GEM COLLECTION.

ART MUSEUM AUTHORITIES HERE DO NOT THINK MR. MORGAN HAS SLIGHTED THEM.

Regarding a cable message yesterday from London that J. Pierpont Morgan had given to the Jardin des Plantes Museum, in Paris, a collection of precious stones which was made by George F. Kunz, the gem expert of Tiffany & Co., and was shown at the Buffalo Exposition last year, Charles T. Cook, president of the Tiffany Company, told a Tribune reporter yesterday that Mr. Kunz, who was out of town, was the only person in New-York who could give any information on the subject. Mr. Cook knew that Mr. Kunz sold a collection to Mr. Morgan last fall, but what became of it he did not know.

DR. WOODBURY CATCHING GERMS.

STUDYING HEALTH CONDITIONS BY MEANS OF BACTERIOLOGY.

Major Woodbury, of the Street Cleaning Department, yesterday sent Macdougall Craven, one of his subordinates, to expose three gelatine plates at the Battery and Norfolk sts., to catch the germs in the air of the East Side. This is part of a scheme to test the relative merits of different methods of street cleaning. To-day three plates will be exposed elsewhere in the city. On the examination the principal of each day will be cultivated and studied in regard to number and virulence, to learn which is the best method of ridding different portions of the city of their particular evils in health conditions. The germs will be cultivated at the Cornell Medical School laboratory, headed by Dr. Woodbury, and photographed. Dr. Woodbury is, among other things, an expert bacteriologist, and the idea originated with him.
