

FOR THE IMMIGRANTS.

Better Arrangements Planned for at Ellis Island.

Washington, March 24.—The supervising architect of the Department is busily engaged upon plans for the improvement of the immigration station at Ellis Island and for the completion of the huge contagious diseases hospital which is being built on the small artificial island immediately adjoining it. The plans will be completed and decided upon by July 1, when the appropriations will be available and the work will be pushed immediately after that date.

The recent Congress appropriated \$50,000 altogether to be expended in these improvements. Of this sum \$40,000 is for remodeling the main building of the immigration station, and \$10,000 added to a previous appropriation of a like amount for the hospital. Congress was also asked to appropriate \$125,000 for an additional ferryboat and \$20,000 for an ice plant for the station, but the requests were denied.

So urgent is the need of the additional facilities that Commissioner General F. P. Sargent and Commissioner Watchorn are bringing every effort to bear upon the early completion of the work. It is expected that within a year the hospital will be completed, and the added facilities of the main building will be ready in half that time.

The Ellis Island immigration station was built many years ago, and upon a plan deemed appropriate for the accommodation of the aliens entering the port of New York. The station, which normally an average of 500,000 persons, and at this figure it was soon discovered that the station was not built for their best accommodation. There are landing now on an average 1,500,000 persons, and with the same facilities the conditions have been such as to call forth a great amount of protest from many sources.

There have been sleeping quarters for 1,500 persons in the station. The limit of immigrants that it was figured could be passed through the main building was 2,000, and in the last year there were many days when 6,000 have clamored at the gates.

No new building is contemplated, and the improvements will be principally internal. The idea is to rearrange and economize the space as to the kitchen, dining room, and other facilities. There have been many nights when 1,500 persons have slept on the floors, crowded in great numbers into single rooms. The sleeping accommodations will be doubled when the alterations are made. It has been necessary to operate a number of dining rooms and to serve many consecutive meals at the same tables, but it is hoped to avoid these necessities by doubling the dining room space.

The plans are only roughly made at this time, but the fundamental arrangements to be made in the kitchen, dining room, and other facilities, which has heretofore been made on the second floor, this condition has been long regarded as a mistake, the newcomers have been forced to struggle up forty steps with their luggage, pass the examinations and scramble down a corresponding forty steps in exit. Under the new arrangement the kitchen, dining room, and other facilities, which will be examined on the first floor, and the whole of the second floor will be given over to dormitories and dining rooms.

The baggage rooms will be on the ground floor, and immigrants who are not held on one occasion or another will never go above it. In addition to these changes, the appropriation will be used in increasing the capacity of the building to its utmost. Commissioner General Sargent and Commissioner Watchorn are both of the opinion that with the doubled capacity they will be able to handle the influx of aliens which is expected to be the result of the foreign consuls in their behalf will cease and the work will be conducted in such a way as to give satisfaction.

Commissioner Watchorn said, when recently in Washington, that with an appropriation bringing that for the hospital up to \$50,000 a contagious diseases hospital could be built that would be equal to the best of any in the world. The hospital on an island could be regarded as an ideal place for the treatment of all contagious diseases.

Originally an appropriation was secured of \$200,000, which was at the time regarded as enough for the construction of sufficient hospital facilities for the purpose of handling the influx of immigrants. The increase in immigration in the last few years, however, that it was found that the demand had exceeded the capacity of a building that could be erected for that amount.

All these contagious disease patients have been held in the hospital at Ellis Island, and at Jersey City, and are being cared for at those hospitals at present. Commissioner Watchorn says that the hospital on an island could be regarded as an ideal place for the treatment of all contagious diseases.

NOTES OF THE MINES.

J. M. Elmer, manager of the Cobalt Central mines, is in New York making final arrangements for the concentrating plant now being built by the Traylor Engineering Company, and it is definitely settled that the plant will be put in operation before August 15. A carload of ore from the Big Pete vein is now being tested at the reduction works of Rickets & Banks, Waverly, N. J., under the supervision of Mr. Elmer and President Howell Hinds. As a result of the test, the process of treatment as originally outlined for the concentrating plant has proved entirely satisfactory, and no alterations in the concentrator as originally designed will be necessary. The completion of the plans has been held back until now in order that this test could be made. This is the first time that the test has been applied to Cobalt ore, although it has been used with great success in the mining camps of the West. The test proves that the process of treatment of the entire Cobalt camp, and will undoubtedly lead to the installation of machinery at the other mines. It is now certain that a complete and economical system can be arranged for the treatment of both high grade Cobalt and low grade Cobalt ores. The new system will save the expense of hand sorting and shipping. Pending the receipt of the test report, Mr. Elmer says that this company is constructing a large bin, in which to store the ore taken from the mine in the course of the test. The bin will be located on the left of the ore in the face of the drift in the Big Pete vein, and will be especially fine, and there is every probability that this company will go on a regular dividend basis before the end of the year.

George Mitchell, president of the Mitchell Mining Company, and a party of New York and Washington capitalists left on Saturday for an inspection of the company's mines at Globe, Ariz., and Guerrero, Mexico. At the Arizona mines Mr. Mitchell will inspect the complete set of the 26-ton smelter, with the view of "blowing it in" at the earliest possible moment. These properties are situated directly on the railway, and there will be no delay in sending the product to market. At the Mexican properties Mr. Mitchell will push as fast as possible the building of the company's railroad connecting the mines with the Pacific Ocean. All ties and timbers have been delivered there, and the rails rolled in the station will be delivered next month.

At the office of the Old Hundred Mining Company, No. 45 West 42nd street, there has been received a report of eighty-six assays made last week in the No. 1 shaft of the Old Hundred mine. The assays were made on No. 2 level in the No. 1 shaft of the No. 1 shaft. They were taken every 100 feet in distance. They show an average of \$18.00 per ton. When the 1,000-ton stamp mill is completed, this ore can be extracted with no delay in sending the product to market. Manager Davis reports that copper values are increasing and that the assays show an average of \$18.00 per ton. The values in some of the shafts run as high as \$40.00 a ton.

The Red Rock Mining Company, of Cobalt, has shipped a carload of low grade ore to the port of New York. The ore is of the same quality as the high grade ore which it is replacing for future shipments. This is the first company that has been brave enough to send its low grade stuff to market, and the report from the Red Rock mine is that the ore is of the same quality as the high grade ore which it is replacing for future shipments. This is the first company that has been brave enough to send its low grade stuff to market, and the report from the Red Rock mine is that the ore is of the same quality as the high grade ore which it is replacing for future shipments.
