

ON THE PACIFIC SLOPE.

Merchants Suffering from Activity of Labor Agitators.

[By Telegraph to The Tribune.] San Francisco, May 4.—San Francisco has suffered greatly during the last week from the activity of the labor leaders. The agitation of the carmen, with their threat of a strike which would tie up the entire transportation system, has had a depressing effect on business. Merchants have curtailed orders as much as possible in anticipation of serious trouble. Practically all the steam laundries of the city have been closed for nearly two months, causing much inconvenience to the thousands of workers who depend on the service. A peculiar feature of the slump is that many high grade mills have suffered. There is more than a suspicion that some of the trouble is due to manipulation by a small clique of operators of gold mines in this city who are seeking to frighten holders to gather in securities.

Another misstep of the rebuilding of the city was passed May 1, when the Merchants' Exchange resumed its sessions in the rehabilitated assembly room of the exchange. The big building stood the earthquake without damage, but all the trimmings and decorations were destroyed by the fire. Nearly a million dollars worth of work of reconstruction, which is now nearly finished.

Little progress has been made recently in the graft investigation, although Detective Burns announced a few days ago that Mayor Schmitz had made a partial confession and offered to resign and tell all he knows if promised immunity. According to Burns, Schmitz admitted that he had an understanding with President Patrick Calhoun of the United Railroad and Navigation Company, and that he had granted a monopoly to the trolley franchise to a mystery. There is a growing suspicion that the arrangements for the trolley franchise were made in connection with the graft investigation and are to be taken with considerable care.

A contest of importance to the railroads and shippers of the country is about to be opened in Southern California, where the celery growers have prepared claims against the Southern Pacific company for \$150,000 damages for losses sustained because of the failure of the company to furnish cars when their crop was ready. A formal demand was made on the company for reimbursement as a preliminary to suit for payment. It is claimed that the company is responsible for failure to furnish cars as a result of a failure to transport freight when delivered to it.

Governor Gillett has thrown a bomb into the ranks of the old Republican machine in California. He issued an order a few days ago removing State Controller A. B. Nye, who was appointed to that office in 1905, and who had been re-elected to that office in 1906. Nye had been in office for a year and a half, and his removal was a surprise to many. The removal was a result of a charge of graft, and Nye refused to be ousted.

Preparations are nearing completion for the construction of a high pressure gravity water system for the protection of this city. The details are still incomplete, the general system has been outlined. It has been decided that fresh water will be used instead of salt because of the corroding effect of salt water on the pipes. On Twin Peaks, at a distance of 2,000 feet from the city, a reservoir will be built, which will be filled by pumping from the Mission. From this large reservoir two 15-inch mains will connect with a 600,000 gallon reservoir at an elevation of 400 feet, which will be in constant use, keeping the normal pressure in the mains. Salt water pumping stations will be maintained in the pressure above the water front.

The movement from the refugee camps, which have been maintained since the big fire made 200,000 people homeless, is increasing rapidly. Before summer these great colonies of fugitives will be a memory of the memories of the disaster of 1906. All the parks must be vacated by July 31. The relief committee permits occupants of cottages to remove them to their own land and pay for them in small instalments.

Official announcement was made this week that the Northwestern Pacific Railroad, which is owned jointly by the Southern Pacific, the Oregon Short Line and the Santa Fe, and is now being extended north of this city to Eureka, will be built along the coast to Coos Bay, in Oregon. This line will ultimately be prolonged to connect with a road building south from Portland.

At the Emmanuel Baptist Church in Brooklyn on Thursday evening G. Waring Stebbins, in commemoration of his ten years of active service in the church, gave an organ concert, at which he was assisted by Miss Bertha Pearl Hobson, soprano; Charles H. Miner, tenor, and William Grafing King, violin.

Miss Luella Phillips, whose studio is No. 124 Carnegie Hall, read at a recent banquet of the West End Neighborhood Club at the Hotel Marcelline. Her selection was a bouquet from the garden of literature, roses, lilies, pansies and forget-me-nots, with a fairies' tale for a finish.

Mme. Ostrhorn Renard, the vocal teacher, whose studios are at No. 44 Central Park West, presented eleven of her pupils in a recital at Eolian Hall on Tuesday evening of last week. Mme. Renard, herself a prima donna, played the accompaniment. Joseph Schaller performed the violin obligato for Mascheroni's "Ave Maria," with Agnes McGehee as the singer. The duet from Rossini's "Messa Solenne" was sung as the opening number by Mrs. Maurice Engel and Selma Lind.

Miss Edna Fish, a soprano, who is at present a pupil of Mrs. Frederic Stebbins, of No. 142 West 51st street, contributed a group of songs at a concert given in St. George's Episcopal Church, Brooklyn, last Friday evening.

Mme. Carla Englander, teacher of voice culture at No. 251 West 11th street, makes a specialty of coaching for grand opera. Mme. Englander was formerly on the professional stage.

Benjamin Monteth, whose studio is at No. 277 Fifth avenue, and his chorus gave "Elijah" at Passaic, N. J., recently.

Martha Jury-Temme will receive a number of pupils in the summer months at her studios, No. 39 East 23d street. She will have classes and also teach privately on Tuesdays and Fridays.

The Cantata Club, of which Albert Gerard Thiers is the musical director, held their second concert at Duryea's, No. 200 West 72d street, on April 29. The concert was assisted by the Richard Arnold Sextette. Solos were given by Albert Gerard Thiers.

An election for a third major in the 8th Regiment will be held on next Friday night. There will be several candidates, it is thought. Company H has decided to visit Jamestown and will leave the city for the expedition on June 23, to be absent five days.

Officers of the 69th Regiment will meet at the armory next Wednesday night to elect a third major. The contest will be, it is understood, between Captains P. E. Reville and J. J. Scanlon. Major McClellan has promised to review the regiment some time this month.

The 1st Regiment will parade for divine services next Sunday afternoon at the Collegiate Church, 123d street and Lenox avenue.

Colonel Daniel Appleton of the 7th Regiment will review the 9th Regiment on Monday evening, May 13. Medals for 100 per cent of duty will be presented to 185 members of the regiment the same evening.

A rifle team to represent the state in the national team match at Perry, Ohio, will be organized by Colonel N. B. Thurston. Competitions for places on the team will be held at Creedmoor, and the state will allow subsistence and transportation for members of the National Guard who are practicing for places on the team.

A vacancy for a first lieutenant which has existed in Company D of the 14th Regiment for two years will be filled to-morrow night by the election of Second Lieutenant Louis J. Zahn.

Company F of the 13th Regiment has elected Lieutenant Edwin G. Babcock captain. He has been a member of the regiment for some ten years, and had previously served in the cavalry.

BRITISH BATTLESHIP DREADNOUGHT—19,000 TONS. This immense new fighting machine has just completed a voyage of 10,000 miles, in which she maintained a speed of over 17 knots for 3,400 miles, without using all of her boiler power. She fired eight of her 12-inch guns together and no damage aboard her resulted from the stupendous concussion (a total energy of 345,792 foot tons) and the breaking of some cups and gauges, the Admiralty reports.

Water that doesn't cause rust. Metal does not rust in Lake Titicaca, South America. A chain, an anchor, or any article of iron, if thrown in the lake and allowed to remain for weeks or months, is as bright when taken up as when it came fresh from the foundry.—Tit Bit.

WATER THAT DOESN'T CAUSE RUST. Metal does not rust in Lake Titicaca, South America. A chain, an anchor, or any article of iron, if thrown in the lake and allowed to remain for weeks or months, is as bright when taken up as when it came fresh from the foundry.—Tit Bit.
