

RETAIN ARCHERS AS BODYGUARD NOBLES OFFICERS OF HISTORIC CORPS.

King Edward, Czar, Francis Joseph and King of Bavaria Maintain Royal Companies.

Through the appointment of the Duke of Abercorn to the office of ensign of the Royal Company of Archers attention is called to the fact that King Edward, like the Emperor of Austria, the Czar of Russia and the King of Bavaria, has a bodyguard of the rank and file of which are still armed with bows and arrows in lieu of firearms of the most modern and approved type.

The four bodyguards in question, namely, those of poor crazy King Otto, of Emperors Nicholas and Francis Joseph, and of Edward VII (the latter in his capacity of King of Scotland), are what may be described as corps d'élite, recruited from men who have held commissions in the army and are of noble birth, and are offered by the greatest nobles in the land.

ORGANIZED BY JAMES I.

The corps is said to have been first instituted by King James I. of Scotland, on his return from captivity in England, with the object of improving the science of archery, and in the history of the battle of Flodden Field it is related that the body of King James IV was found covered and surrounded by the bodies of his archer guard.

DUKE OF BUCLEUCH COMMANDER.

In the case of the officers the tunic is replaced for court wear by a green cloth tail coat, richly embroidered with gold stitches and arrows, with green velvet facings, gold epaulets and aquillets, crimson silk sash, gold laced dark green trousers and cocked hat with green plume.

In this way the commanding officers of the bodyguard of archers enjoy in the northern kingdom the same privileges and status as do the colonels in chief and the lieutenant colonels of the Horse Guards and Life Guards in England.

THE CZAR'S CORPS OF ARCHERS.

While the archer bodyguards of the rulers of Austria and Bavaria are far more picturesquely and magnificently garbed than those of King Edward, the Czar's corps of archers consists of fantastically garbed orientals, who constitute a very striking feature at all the grand ceremonies of the Muscovite court.

sport which always appealed to her as calculated to develop graceful movement, stately calm and repose of manner. And it must be confessed that the contrast which exists between the hurried movement and glow of the feminine lawn tennis player and the elegance and elastic grace and air of dignity of the fair archer is all to the advantage of the latter.

ARCHERY STILL POPULAR.

Tennis, bicycling, motoring, polo, lacrosse, tobogganing and golf are either having at the present time, or else have had in the past, their day of vogue, which has often proved ephemeral.

Archery, however, has maintained its popularity steadfastly and unimpaird through hundreds of years, and the enthusiasm to which it has given rise is amply shown by the many spirited verses that have as their theme the bow and the arrow.

ery clubs and associations are for the most part confined to the aristocracy, and are so exclusive that it is as difficult to obtain admission thereto as to get elected to the Jockey Club in Paris.

Indeed, to be a member of one of these rural archery guilds constitutes, particularly in the north, east and west of France, a sort of patent of nobility and of blue blooded ancestry, parvenu and rich people of plebeian origin being as a rule pitilessly blackballed.

IN THE GREEN MOUNTAINS.

Manchester-in-the-Mountains, Vt., Aug. 22.—This week has been nearly as busy as the preceding one, which was the best Manchester has had.

CARE IN MILK IMPORTANT.

Protection from the dangers lurking in milk is sought in the selection of a good, wholesome milk from a responsible company, and, equally important, in using care not to expose the milk to outside contamination after the same has been received.

ELECTRICALLY PURIFIED WATER.

To secure pure drinking water is the constant aim of cities, institutions and individuals, because this fluid is generally recognized as one of the most deadly agencies for the spread of disease.

HOUSEHOLD SEWAGE DISPOSAL.

The question of sewage disposal and the utilization of wastes, already referred to, are both problems which now engage the attention of municipalities, institutions and places where a number of people live in close proximity and of individuals who living in country districts, where old-fashioned methods still prevail, are aware of the dangers around them and the risks they are taking.

FOREIGNERS, BEWARE!

The case was one of assault, and the magistrate, fearing that it might be the beginning of another outbreak of hooliganism, was inclined to be severe.

NEWPORT.

Newport, R. I., Aug. 22.—With the opening of the national tennis tournament at the Casino and the opening of the polo tournament at the Westchester Polo Club Grounds, at Bateman's Point, and with various other sporting features the present week in Newport can truly be called sporting week.

Polo and Tennis Bring Influx of Visitors—Much Entertaining.

ARCHERY CORPS IN PARIS.

In France one finds not only the nobility but also the middle classes and what is known as the small bourgeoisie devoted to archery. In Paris alone there are no fewer than five large corps of archers, each with a long list of members on the roster of which are to be found the names of leading statesmen, of celebrated painters, such as, for instance, Carouls Duran; great lawyers, and bankers of note.

Wednesday, was a surprise, even though it had been expected. When the news of the wedding became known the couple had been married for several hours and were about ready to leave Newport.

Robert Bacon, Assistant Secretary of State, with his family, has been spending a few days with the Commodore and Mrs. Edwin D. Morgan. W. Bourke Cockran has been a guest at the New Cliffs cottages.

THE PROTECTION OF PUBLIC HEALTH EMPLOYMENT OF SANITARY METHODS URGED.

Prompt Solution of Hygienic Problems Imperative—Some Suggestions for Protective Measures.

It has been said that so far as the ultimate result is concerned it is as dangerous to be killed by a microbe as a bullet, and this so-called witticism, which, perhaps, had origin in the Emerald Isle, leads one to consider the significance of this perhaps lightly spoken observation.

broken up and hydrolyzed (turned to fluid), and which is the first step toward successful purification. This purified fluid is now in the most favorable condition for oxidation and nitrification, which is the second step toward successful purification. The sewage is then pumped back into pure water again, and the purified water is used for all purposes.

With dust as one of the greatest of disease germ propagators, great care should be taken to remove and not merely disturb it in one part of a room only to allow it to settle in another part into invisible particles, which later again settle in the vicinity. That was the old way, before modern mechanical ingenuity suggested the idea of forming a vacuum, and by means of a rubber tube sucking the dust and disposing of it. This has been done successfully for some years, there being a gradual mechanical improvement in the apparatus used.

The new way, patented by the Vacuum Engineering Co., of New York, is the most efficient of all. It consists of a separating tank, in which the separating tanks are eliminated, the dust is passed through a series of fine meshes, and is then drawn into a vacuum, where it is held until it is ready to be disposed of.

THE HOUSE FLY NUISANCE.

As already mentioned, the spread of disease through the agency of the fly constitutes an element of great danger, particularly so because we have become accustomed to look upon that insect as an annoying but harmless summer worry. In recent times wide publicity has been given to the existence of a real danger in not destroying flies, and among other interesting experiments that the common house fly, Fierca, a German scientist, has been found by Ficker, a German scientist, that the common house fly could eat the typhoid bacillus without danger to itself, and that it could transmit the infection for a period of twenty-three days.

USEFUL HOUSEHOLD FILTERS.

The ordinary city water is often muddy in color, even if it be free from germs. For this if for no other reason it is in water should be filtered. Boiling kills the germs, but it also deprives the water of its air and natural salts, and the muddy condition still remains. The chief objection to filters such as filtering stones or the Pasteur porcelain tubes, though admittedly good filtering mediums, is that in order to secure the best results it is necessary to take them apart every day for cleaning, a tedious process. One must also discriminate between straining and filtering. Charcoal, asbestos and other substances are used to allow the dirt to filter through, which sediment gradually creates a bed of filth, requiring frequent renewal of the filtering material.

RICHFIELD SPRINGS.

Benefit Concert at the Earlington—Automobile Parties Arrive.

Richfield Springs, N. Y., Aug. 22.—The musical benefit of the season at the Earlington was the benefit concert which took place there on Thursday night, when Will T. Carleton, barytone, sang, and Miss Louise Hinds gave several readings. The proceeds were given to the Public Library, and the success, acted as patronesses: Mrs. Edward C. Anderson, Mrs. C. V. R. Berry, Mrs. Alexander M. Cash, Mrs. Gashier De Witt, Mrs. W. D. Fish, Mrs. Joseph D. Ibbotson, Mrs. Niles D. Jewell, Mrs. Myron A. McKee, Miss Proctor, Mrs. Charles Cook Ransom, Mrs. John A. Shields, Miss Swift, Mrs. Frank W. Townsend, Mrs. George W. Tunnicliffe and Mrs. Dewees Wood.

Progressive such as at the Earlington on Tuesday night resulted in the winning of prizes by Mrs. Sibellus, Mrs. William Schwab, J. Dermody, Mrs. Wellier and Mrs. G. W. Moore.

Mrs. Samuel D. Edick, Miss Mary Edick and John A. Shields, Jr., of Grand View, have joined Mrs. John A. Shields at the Tunnicliffe cottage for the week.

Miss Annie R. Weaver and Miss Charlotte S. Weaver have arrived at the Kendallwood for their yearly visit.

HE KNEW HIS MAMMA.

Neighbor—Bertie, your mother is calling you. Bertie—Yes, I know it, but I fancy she isn't using me very badly.
