

# Why You and Every Member of Your Family Should Use DIOXOGEN

Dioxogen is a reliable protection against infection and infectious diseases. It is the enemy of harmful germ life and all unhealthy conditions. Its application in many of the accidents and emergencies of every day life prevents the development of serious complications from apparently simple causes. Nothing is so safe and effective in the treatment of all classes of diseases and accidents occurring in every family.

Dioxogen makes possible the application in the home of those practices which have made modern hospital success.

Dioxogen is used for the mouth and teeth, as a gargle, for cuts, wounds and burns, after shaving, for skin affections and the complexion, for sunburn, for manicuring, to stop bleeding, for chapped hands, to destroy odors, for insect bites, etc., etc.

Why you should always ask for Dioxogen by name:

Dioxogen is the pure peroxide of hydrogen. In all the comparative tests which have from time to time been made Dioxogen always heads the list; out of 32 samples of peroxide of hydrogen tested by the State Chemists of Connecticut at New Haven (1909-1910) Dioxogen was the only one that fully conformed to the U. S. P. requirements and came up to the label statements; —it headed the list.

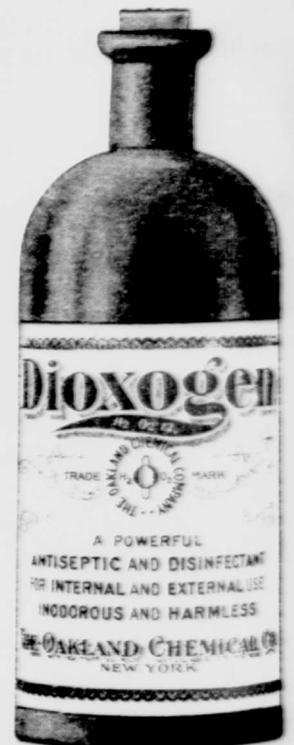

The name Dioxogen is not only a guarantee of quality, but is a protection against innocent or intentional misrepresentation.

Dioxogen is sold by nine out of ten drug dealers when asked for, but to avoid mistakes you should always ask for it by name.

We believe that every reader of this advertisement would be a permanent user of Dioxogen if its usefulness was appreciated; we believe this so thoroughly that we are willing to send a full trial bottle free upon receipt of request; write for it now—these trial bottles cost us, including postage, nearly 20 cents; we know so well what Dioxogen will do that we are willing to go to this expense to give you an opportunity to try it.

Dioxogen has a hundred uses; the descriptive circular with each trial bottle tells about them. THE OAKLAND CHEMICAL CO.,
