

THREE CARDINALS AT MASS TO-DAY

Will Open Catholic Societies' Convention in Cathedral.

GIBBONS PRAISES CITY'S HOSPITALITY

Apostolic Delegate Denies Pope Has Asked Prayers for Entente.

A pontifical mass at St. Patrick's Cathedral at 11 o'clock, made notable by the presence of three cardinals, an apostolic delegate and a lay attendance of unusual prominence, will inaugurate today the Fifteenth Annual Convention of the American Federation of Catholic Societies.

For the last five days delegates and persons interested in Catholic affairs have been pouring into this city for the convention, and, according to a rough estimate made last night by the reception committee, 26,000 Catholics have thus far arrived. The cathedral will not accommodate a third of those who are anxious to attend the services to-day.

Cardinal Gibbons, accompanied by Archbishop John Bonzano, the Apostolic Delegate, arrived at the home of Cardinal Farley last night and plans were made for a subsequent meeting with Cardinal O'Connell, of Boston, who is staying at the Knickerbocker Hotel.

The two church dignitaries were escorted from the Pennsylvania station by Monsignor Michael J. Lavelle and John Whalen, president of the American Federation of Catholic Societies.

Gibbons in Good Spirits.

Cardinal Gibbons was in excellent spirits as he hurried up the steps of the archiepiscopal residence, and suggested that the celebration was too great for comment.

"One thing is certain," he said, "I know that the great City of New York will extend to the mighty host coming within its gates hospitality worthy of this great metropolis."

"As for the proceedings of this week, it is all for construction. It is for the wellbeing of the Church and the country and for the material and spiritual uplift of our people."

Bonzano Denies Report.

Archbishop Bonzano, who accompanied Cardinal Gibbons, took occasion to deny the recent newspaper report published in this city that the Pope had urged all Catholics to pray for the success of the Entente armies and the defeat of the Teutonic powers. "Although I have received no direct communication from the Vatican I do not believe it," he declared. "I would not say the Holy Father is neutral. He is more than that. He is universal and regardless of their nationality. He is the spiritual father of humanity."

Regarding the convention he said: "The Holy Father has sent me here as his representative to this great gathering and he has conferred upon it his benediction. We are here to examine and to see what has been done this year and prepare a new programme for the future. With this programme we are not only to work for the interest of the Church but for the country as well."

"The work is dedicated to the moral, spiritual and material good of the whole people. Although it is intended particularly for Catholics, the aims of the convention are for the good of all."

A report on the Mexican situation was presented at a session of the executive committee held yesterday, but the nature of it was so delicate, it was said, that modifications and revisions might be made before it was made public. A member of the committee has been made to keep politics out of all discussions and meetings of the convention.

Criticism of Administration.

"It is our desire to let the facts in the Mexican situation speak for themselves without comment," said the committee. "The chief attack is directed against Carranza, and while there may be some criticism of the present administration there is nothing directed against President Wilson himself."

Announcement was made yesterday that a loyal legion made up of Catholic laymen associated with military organizations will surround the Cathedral to-day to assist the police in handling the crowds. The same force will be on hand at Madison Square Garden, where a mass meeting will be held at 8 a. m.

G. O. P. TO REVIVE RED FIRE FACTS

Marching Clubs and Torchlight Parades Will Be the Style.

STATE CONVENTIONS AGAIN IN VOGUE

League of Clubs Plans a Nation-Wide "Get-Together" Meeting Campaign.

The spirit and methods of the old-fashioned Republican campaign are coming back. Marching clubs, torchlight processions, "first voters" organizations, and even the rallying, organizing state convention, or an organized assemblage which takes its place, will all be used.

PANAMA THREAT WORRIES WILSON

His Failure to Supervise Elections May Cause Rebellion.

[From The Tribune Bureau.]

Washington, Aug. 19.—State Department officials are following with much concern developments in the Republic of Panama, where, as the result of frauds in the national elections last month, a revolution seems imminent. Should the threatened trouble come to a head, under its treaty obligations it is admitted that the United States would have to step in, as it has done in Haiti and Santo Domingo, and re-establish order.

Administration officials are following the situation on the isthmus for another reason. Although it is not admitted, it is charged that much of the responsibility for present conditions rests upon the State Department. Before the Panama elections were held the American Government was asked by the leaders of both the principal parties in the republic to send officers to supervise the voting, as had been done in 1908 and 1912 by President Roosevelt and President Taft.

President Wilson's Attitude.

Instead of understanding President Wilson adopted much the same attitude he has taken toward Mexico, and ruled that the United States had no "right" to interfere in the internal affairs of another country. Whereupon the result usual in Latin-American countries, happened.

President Porras, through his control of the government machinery, forced the election of Valdes as his successor. According to evidence in the State Department ballot boxes were stuffed, eminent citizens disfranchised and "repeaters" employed. Citizens are understood to have been shot down so close to the polls that American troops had to be called out to protect lives and property inside the zone.

The defeated contestants have made complaint to the State Department and ask for an American investigation. In case Valdes is permitted to take office in November, it is understood that he has threatened to take matters into his own hands.

State Department Reluctant.

Burdened with the border troubles with Mexico and with marines on duty in both Haiti and Santo Domingo, the State Department has been reluctant to take up the Panama situation. But foreign policy is so touchy a subject now with the Administration that, as long as there is no actual outbreak, it is doubtful if the President will run the risk of further censure by calling attention to fresh Latin-American difficulties.

Republicans in Congress, however, intend to press for an explanation from the State Department. Resolutions have been introduced in both houses asking for information.

"In the light of what is happening in Panama," declared Representative Esch, of Wisconsin, to-day, "we will not be roused in the estimation of Latin America. We can no longer be considered as a moral force there. All the high sounding words of our foreign policy are no more than 'sounding brass and tinkling cymbals.'"

TROPHY FOR AERIAL DERBY

\$5,000 Memorial Being Made for Fastest Lap Around Manhattan.

The Hydro-Aeround, a silver and gold trophy worth \$5,000 and designed by Alexander Popin, will be awarded by the New York Flying Yacht Club, to the person who makes the fastest lap around Manhattan in the \$5,000 hydro-aeroplane derby to be held here shortly.

Mr. Popin has taken great interest in aviation and will leave next month for London to join the Royal Flying Corps.

WAR HAS CAUSED NO BIG INVENTION

Conflict's Contributions to Science Disappointing, Says Marconi.

DECLARES U. S. SAFE FROM ANY INVASION

Submarines Can Protect Coast Effectively, Wireless Inventor Thinks.

Rome, Aug. 19.—No notable scientific discoveries or inventions are growing out of the great war, in the opinion of William Marconi, the wireless inventor.

"On the whole, there have been no great war inventions that occur to me," he said. "Most of them have been minor ones, or applications of knowledge previously at our disposal, as in the case of poison gases, if these may be named at all. In my own field, there has been some advance in practical wireless, by which we are now able to direct the artillery fire of a ship by signals from an aeroplane. This has been made possible largely through big improvements in aircraft."

"The big lesson in Europe has been one of organization, of the physical handling of big material problems by the armies. I doubt if any one before this war realized the meaning and value of railroad transportation on a large scale, as it is practiced in the United States. Europe, too, has learned how to do big industrial jobs overnight, to assemble raw materials and turn out needed factory products."

"I refuse to play the prophet role, so I would rather not say how many of these war products will be of use to us when peace comes."

Has Introduced Reforms.

Since the beginning of the war Mr. Marconi has had unusual opportunities to witness the practical side of the war, having early put his scientific knowledge at the service of his country. As a Senator of the kingdom he has visited England, Belgium, France, and other countries and introduced industrial and shipping reforms. In his capacity as military officer he has come into close relation with the army and the navy and given the benefit of his scientific and business organization knowledge to munition factories.

He has also perfected the army and navy wireless systems, and is at present working on a signal system which will be of great benefit in the most difficult submarine warfare far more than the present system of surface vessels. He has also perfected the army and navy wireless systems, and is at present working on a signal system which will be of great benefit in the most difficult submarine warfare far more than the present system of surface vessels.
