

TOM'S ENCHANTED BAIT.

Copyright, 1899, by C. B. Loomis.

Tom was going fishing. It was a dark night, and he was out by the barn...

"What's the matter, Sheppy?" asked Tom, patting him on the head and then drawing forth a particularly fat worm from the earth...

"Do you want to know how to catch all the fish you can carry away?" said the voice.

"I'm right in front of you, but you can't see me because you are a mortal and I'm not. Your dog sees me, though, and he's frightened stiff."

"Well, dump your bait and you'll find it all here in the morning. Good-bye."

"Good-bye," said Tom, and dumped his bait on the big rock.

"There he went in and told his father of the compact that he had made. Mr. Loveland laughed and said: 'We get the best of that bargain, Tom...'

"I'm right in front of you, but you can't see me because you are a mortal and I'm not. Your dog sees me, though, and he's frightened stiff."

TO GIVE WARNING IN FOGS.

DISCOVERY MADE WITH THE BIGGEST MEGAPHONE EVER BUILT.

It is Found That Sound Can Be Projected in Straight Lines as Rays of Light Are by the Searchlight-Value of the Discovery in Maritime Navigation Suffer in Fog.

GUILFORD, Conn., Oct. 14.—At the Government Lighthouse station on Falkner's Island, which is directly off this coast, there has just been erected the largest megaphone in the world. It is seventeen feet long and seven feet in diameter at the mouth. It stands upon a strong pier of twenty-eight feet in diameter upon which it revolves.

The great difficulty with sound signals as aids to navigation in a fog is that they cannot be located with any accuracy. Cases are on record in which two officers standing on the bridge of the same steamer have reported as much as 90 degrees in their estimate of the direction of a fog whistle which was distinctly heard by both of them.

The apparatus which has just been erected at Falkner's Island and which is the invention of R. F. Foster, is intended to locate the signal station accurately. The principle upon which this instrument works is very simple in theory, yet its practicability was established by some of the most eminent authorities on acoustics.

The apparatus which has just been erected at Falkner's Island and which is the invention of R. F. Foster, is intended to locate the signal station accurately. The principle upon which this instrument works is very simple in theory, yet its practicability was established by some of the most eminent authorities on acoustics.

When the first tests were made, the sounding instrument used was one of the smallest sirens which could be procured, and was blown with steam at forty pounds and fed by a ten-and-a-half pipe. This is only about one-twentieth of the power of the sirens at Sandy Hook, Block Island and Beaver Tail.

CANADA AND THE BOERS.

Sympathy with the Transvaal of French Speaking People in Quebec.

QUEBEC, Oct. 13.—Sir Wilfrid Laurier's delay in tendering a Canadian regiment to the British Government for service in the Transvaal has caused intense dissatisfaction among the ultraloyal element in the English-speaking provinces, but the public expression of this feeling is so fiercely repressed by a large part of the French-Canadian population of Quebec that intense rage hatred threatens to be aroused. The advocates of the Imperial Federation in Nova Scotia, Ontario and the West are indignant at the Government's inaction. They argue that Canada sent a contingent to the Queen's Jubilee to parade when there was no danger, and that it is now the country's duty to show that the Dominion is prepared to share the Empire's danger and to illustrate to the world that "whoever would attack the lion must reckon also with the cub."

THE AUTOMOBILE HANDORGAN.

Scroggins Sees It Coming, and Thinks It Is Not Very Far Off.

"Now, here," said Scroggins, "is a suggestion that I think has something in it. The handorgan is common use nowadays in cities in the piano organ on wheels. It takes two men to run it, one to turn the crank and the other to look after the collection. My idea is to have some sort of small motor, air or electric or gasoline, to turn the crank. Then the same man could run the organ and attend also to the business end of it. It is a very great economy and one in line with all modern endeavor, which is in the direction of the greatest possible economy in production and handling."
