

FINANCIAL AND COMMERCIAL.

SAURDAY, Oct. 22. The weekly bank return, published each Saturday morning in Wall Street, attracts very little attention, in the first place, because of the prevailing nominal rates for the use of money, and in the second place, because it is well understood that the relations of our local trust companies with the Clearing House institutions are such at the present time as to render the bank statement almost, if not entirely, valueless as a revelation of financial conditions. If the trust companies are willing to take from the banks a large proportion of the burden of loans which the latter institutions have been carrying, the transaction serves to ease the position of the banks and accomplish such a reduction of bank liabilities as to reflect favorably on the drain which they are now meeting as the result of Wall Street's financial operations. Every one realizes, of course, that these operations have unquestionably produced a great increase in the aggregate of loans made by financial institutions in the recent past and that whatever figures are presented in the bank return the total reserve of cash held by money lenders as a whole against total liabilities is less than it was, and will continue to grow less as long as the current movement in security prices continues upward at its present rate and the supply of cash is unreplenished. The figures of the bank return to-day exhibit an increase in loans of nearly \$4,000,000—an increase in cash held of \$3,355,500—the latter item, no doubt, correcting to some extent the inadequate statement made last Saturday as to cash in hand—and an enlargement of surplus reserve of \$1,896,000.

The advance in market valuations during the week to-day, the particularly strong advance in the price of Amalgamated Copper, Erie, Southern Railway common and Delaware and Hudson. For the rise in all of these, except Amalgamated Copper, no further reasons were made known than have long been generally talked of. The buying of the Copper shares was commonly attributed to the issuance of a prospectus by a Boston speculator who possesses what may be moderately described as a highly imaginative mind, declaring that future dividends on Amalgamated Copper would positively be at the rate of 6 per cent. per annum. The truth about this matter, as it seems to conservative people, is that the shares of all copper producing companies are held at present at a very strong position of the market for raw copper metal, but that this applies less to the Amalgamated company than to any other of the great copper mining concerns. The Amalgamated makes no annual reports, but there is trustworthy reason for believing that it produces its copper at a greater cost than that of most of all its principal competitors, while it manifests labors under the peculiar disadvantages of the expensive litigation in which it has been so long engaged and which has never further from a settlement than it is to-day. There is not the slightest reason to believe that the price of shares which in the present condition of the market made the stock responsive to such a buying movement as was seen in it to-day. The aspect of to-day's market did not at all change the front that it has displayed for days and weeks past. The character of the trading was still mainly speculative, and the movement in the last half hour of business was very many of the stocks to lose a great part of the gains which they had made earlier in the day. Consolidated Gas was rather notably weak, and St. Paul declined 15 points on sales of a bare thousand shares.

Mr. Vanderlip's speech at St. Louis and the rumored sale of the New York and Western Railroad to the New York and Hartford people were about the only two actual occurrences during the week that supplied matter for serious financial discussion. The commercial agencies report general business throughout the country as good, although colder weather would undoubtedly be a greater stimulus than is now given for sales of merchandise incident to the season of the year. In the iron and steel trade prices for pig iron, the basic commodity, not only held firm, but evinced an advancing tendency. On the other hand, the trade reviews note a feeling of disappointment at some of the leading iron and steel mills of England, which the strength of pig iron brought in as yet only a small quantity of fresh orders for finished products. New orders from the railways and from the shipping interests on the Great Lakes have been placed; but only to a small extent, considering the capacity of the producing mills. It is to be remembered, however, that the time for placing such orders is normally at the beginning rather than at the end of the year. In the commodity markets prices of wheat have risen to almost the highest level of the season because of continued evidence that the wheat harvested this year will be of such poor weight and quality that an unusually large proportion of it will fall below contract grade. This is not only an unwelcome discovery to the short interest in the speculative options for the future delivery of the staple, but it has forced the Northwestern milling interests to take extreme steps in order to be permitted to handle their supply of the product for conversion into flour will be sufficient. The news came on Friday that one great flour milling establishment in Minneapolis had bought for its use a million bushels of wheat in Canada, paying thereunder an import duty of 25 cents a bushel, and had asked the Government for permission to bond two of its mills in order to obtain under the law a rebate of the duty paid as soon as the flour made from the wheat had been exported. Among our leading banking houses, while the talk still is of money, a keen watch is being kept upon the current movement of the price of sterling exchange, both in our own country and at the great European financial centers. Sterling, however, which a little while ago was verging on the point of gold imports, has now seemingly quite reversed its course, and this despite our apparent large export trade in cotton and our daily huge shipments of cotton. Abroad exchange is still running heavily against London, and the fact is connected with the idea that large borrowing for both Russian and Japanese account are expected before long.

New York Stock Exchange Rates Oct. 22. Closing prices of United States bonds.
