

St. James Building of Broadway C. F. King, of Boston, Financial Agent To Occupy the Entire Second Floor

PRINT herewith a picture of the St. James Building, 1135 Broadway, corner of 26th Street. The lines drawn below and above the windows on the second floor are intended to indicate the exact location and space occupied by my New York office, which is to be formally opened to the public this morning at 10 o'clock.

I extend in this public manner a cordial invitation to all investors and all persons interested in corporation securities to visit this elaborate and magnificent suite of offices on the occasion of their formal opening to the public to-day. The hours will be from 10 A. M. to 4 P. M., and in the evening from 7 P. M. to 10 P. M.

The entire second floor of the St. James Building has been refitted to meet the requirements of my ever-increasing business. It is in no spirit of boasting that I declare this office to be unsurpassed by any other financial institution or banking house in the city of New York. This fact will be apparent to every one who attends the formal opening to-day or this evening.

In formally opening these New York offices to the public to-day I dedicate them to the best interests of honest investors and announce publicly and boldly that always I shall stand for and defend all things that are right in the world of finance and that always I shall condemn all things that are wrong in finance.

I announce publicly and boldly that I am opposed to the fictitious form of speculation fomented by Wall Street and its disciples and apostles—that I am opposed to trading in stocks and bonds on margin, and that my gospel teaches me that gambling in corporation securities by marginal tradings is a broad and beaten path that leads more men and women to destruction every year than any other form of gambling.

My gospel teaches me to believe that banks, trust companies or corporations, whether railway, industrial or mining, should be conducted in the interest of the people whose funds make their success possible, whether such funds are deposited in bank vaults in the name of safety or invested in stocks or bonds.

I announce publicly and boldly that to my mind the crying need of our country is a clearer understanding of the rights of corporation stockholders, whether the engraved certificates represent a one-share interest in the Billion Dollar Steel Trust or a \$10 peanut stand.

In formally opening my New York office to-day I hope to meet at least 5,000 men and women who believe in these things as I believe in them. The hours for the opening, as stated above, are from 10 A. M. to 4 P. M., and again in the evening from 7 P. M. to 10 P. M.

MINING AND SCIENTIFIC PRESS
Published weekly by the
Mining and Scientific Press Co.,
100 Broadway, New York, N. Y.
Copyright, 1907, by
Mining and Scientific Press Co.

The North Butte Extension Copper Mining Company's subscription books will close to-morrow, Tuesday, February 19, at 3 P. M., instead of Saturday, February 23, as advertised. We advertised to open our books to-day and keep them open five days, but owing to the large number of subscriptions already received, the books will remain open only one day, as above stated.

The Boston News Bureau says, February 18th:
NORTH BUTTE.

Butte, Mont.—It is reported on good authority that North Butte has made a big strike in the crosscut from the 1000-foot level of Jessie, extending north to Berlin. A vein 28 feet wide has been cut and fully half of copper glance, which is claimed to assay 40 per cent copper. The strike is located under the Berlin, but information is not positive. The vein is on a line to strike through the properties of the North Butte Extension Co. and Butte & London. It has been the most important strike made in Butte in years as it opens copper the farthest north and in the midst of new companies engaged in developing mines.

The Boston News Bureau says, February 18th:
THE NORTH BUTTE STRIKE.

Butte—Ore brought from the Berlin crosscut in the North Butte Extension proves the truth of the rumor of a strike. The ore is the finest looking grade ever found in Butte. It is copper glance and the vein is between 12 and 14 feet wide in the crosscut.

North Butte Extension Copper Mining Company

74 Broadway, New York City.
We offer for public subscription at \$1 a share a limited amount of the stock of the

HANSON

Consolidated Mining and Milling Co., Ltd.
Incorporated under Laws of Ontario. Fully Paid Up and Non-Assessable.
(No personal liability.) Capital, 1,500,000 Shares. Par Value \$1.00.
Registrar:—
Knickerbocker Trust Co. Security Transfer and Registrar Co.

The properties of the company consist of 1,234½ acres in the famous Fort Arthur, Ontario, silver district. They comprise the famous Silver Mountain Mines known as the East and West Ends. We have a mine that is a new mine, not a hole, in the ground; has over one mile of underground workings, shafts aggregating over 1,075 feet and a large force of miners taking out rich ore.

The equipment consists of a twenty-stamp mill (Allis & Chalmers Co. manufacture) in full operation, and in perfect running order and concentrates seventy tons of ore per day. The mine is equipped with the best of hoisting machinery, together with 7312 double compound shafts, cages, etc., a 7-hp hand drill company, a complete electric plant, machines, etc. We have fifteen (15) known veins, many of which are producing large quantities of rich silver ore. Hundreds of thousands of dollars of high grade ore have already been mined, and the work of development has just been continued. We have a mine that any stockholder should be proud to possess stock in.

As a curb broker of considerable experience, I have no hesitancy in urging the purchase of the stock of the company. The stock is selling at or near a dollar a share whose intrinsic value can compare with that of Hanson, and my prediction is that every man who buys Hanson now while the stock is being offered for subscription will reap a handsome profit in the investment. Send in your subscriptions now.

body has been followed 120 feet. Some of the ore is rich in silvate. Estimates place the tonnage at 130,000. The mine has been waiting on the Golden Cycle cyanide mill for shipments of low grade ore. The mill is now receiving ore preparatory to starting with 300 tons daily capacity. A fourth of the ore will yield 20 a ton value. The rest is low grade.

Lessee Reynolds, operating on the second level of the Wild Horse mine, on Bull Hill, Colo., reports that development work is being done on a vein of ore carrying 40 per cent gold value per ton. In thirty days Reynolds and his son have outputted \$4,404.50 gross in the spring.

The Colorado Consolidated Copper Company, operating on the second level of the Wild Horse mine, on Bull Hill, Colo., reports that development work is being done on a vein of ore carrying 40 per cent gold value per ton. In thirty days Reynolds and his son have outputted \$4,404.50 gross in the spring.

them entirely from the market. All of this has taken place on ore that runs less than 3% copper, which is the only metal of value produced by the company.

The Lincoln Copper Company is located in the same copper zone, with 900 acres of mineral territory and an average of 10% copper. These shares are selling at \$10 to \$20 per ton in gold, in the five developed veins and twelve veins still unopened, carrying a larger percentage of copper than any other mine located in the South or West. These shares are selling on the market at a price, which taken in consideration with the above facts, will prove very profitable in the near future. It doesn't take a man with more than the ordinary amount of sagacity to determine that there is an opening to profit by.

The purchase of shares in any producing copper mine at this time will return for the next two years a greater amount of profit than any other share investment on the market. We desire to go on record with the statement that low priced shares in any producing copper mine will, through the advances in the price of its products and the increasing earnings, find its shares in demand at double the present figures before the end of the year. The wisdom of investing in producing copper mines was illustrated in the recent slump in the price of gold and kindred securities, while the prices of copper shares not only held their own, but in most cases showed an advance compared with two months ago.

The price of Lincoln Copper shares, when we first called attention to them, some three weeks ago, was under 90 cents; they closed Saturday at 75 cents per share.

We predict that this stock will sell at three times the present price, even before dividends are announced. The Lincoln Copper Company is just beginning its career, and is shipping ore worth \$1,000 per car, and will prove another "Ducktown Copper," both as to its production and its advances in the price of its stock. It is a new copper producer located in the Appalachian field that has made all its stockholders rich, and from the ore in sight will continue to produce copper for the next hundred years.

Orders in all producing copper stocks promptly executed. Weekly market letters on "Coppers" furnished our clients.

There is something going to happen in copper this year that will surprise the people of the United States. There is not a man in the country who will not make big profits this year by buying stock in any copper-gold mine that is actually producing and selling copper and gold.

Every man's dollar, if invested in copper, is as safe as in the bank, because the supply is far below the demand, and will be for some years to come. This is due to the indisputable fact that mines that carry copper are scarcer than those that carry silver, gold or iron.

These facts have only come to the surface, and only among the students of copper, during the past year or two. The great speculating and investing public is just being awakened to the realization of the above facts, and in advertising in the manner in which we do we are endeavoring to acquaint our clients, and those who are likely to become our clients, with this important knowledge, which if taken advantage of, will make money for every one of them, unquestionably.

To give our clients and the public some idea of the value of copper shares in mines located in the Appalachian field we desire to call attention to the following facts, taken from the last issue of "Stevens' Hand Book on Copper":

The Ducktown Copper and Iron Company is located in Tennessee, organized February 16, 1891, with capitalization of \$375,000, par value shares \$5 each, divided as follows:—300 founder's shares and 74,800 ordinary shares. The ordinary shares have paid

963% IN DIVIDENDS.
*The founder's shares have paid

19,144% IN DIVIDENDS.

*The property includes the Mary, Galloway and other mines; main shaft is 600 feet deep, the cross averaging under 3% copper, without either gold or silver value; has one smelting furnace of 500 tons daily capacity. Last year's production of copper was 3,547,212 pounds, and is second only to the Tennessee Copper Company in the Appalachian field.

And this record was made during the time copper had been selling for about 11 cents per pound over a period of years. This means that for every dollar invested in the ordinary shares, the holder has already been paid at the rate of 65% yearly, and for every dollar invested in the founder's shares the holder has already been paid at the rate of 1,274% yearly. The shares started at much below par and have gone to such a figure as to remove

BIG ORE DEVELOPMENT AT ELY

MILES OF COMMERCIAL COPPER IN NEW NEVADA FIELD.

Railroads Planning to Make the Camp an Important Centre—Great Activity at Johnnie—Exploring and Reclaiming in Montana—Many Mills Are Going Up.

Ely, Nev., Feb. 11.—A large ore body recently developed in this district is that of the Eureka Mining Company, a part of the Nevada Consolidated Company's holdings. Some 8,000 feet of tunneling and drifting has been done in four directions from the 300 foot level of the main shaft, and over 15,000,000 tons of ore have been blocked out. The bottom of the main shaft is over 100 feet down in ore body, and the foot wall has not yet been reached. The faces of all the drifts are also in ore. The ores are sulphides, and oxides of copper, showing an average assay throughout the entire body of 2.8 per cent. A large portion of them can be treated directly in the furnace without concentration. The formation is porphyritic, and the ore can be easily and economically mined.

The Nevada Northern Railroad is being pushed through the center to the west of Ely. When it is completed to Copper Flat—a matter of a few months—daylight mining will be undertaken at the Eureka on a larger scale than at any other copper camp in the country. Daylight mining consists of tearing down a hill by the use of eight or ten ton steam shovels.

George Gunn, who located and developed the Veteran mine of the Cumberland Ely Copper Company, and who has been more prominent than any one man in bringing the camp into prominence, is here looking over the property. Mining men familiar with the Veteran think that this will be one of the greatest mines ever developed in the West.

The average assay values of the Veteran ore are from 4% to 5 per cent, which is considerably higher than has been shown thus far by the Ada, the Jupiter or the Wedge. Standing on the site of the mine, just beyond Point and the Ruth mines and looking east and west the observer notes the Ada, Jupiter, Ruth, Star Point and Eureka shafts, which all within less than half a mile of a straight line north and south, but extending for over six miles east and west. Beyond the shaft to the west are the Bee Hive and Westphalia shafts of the Butte and Ely, both of which are in ore. Still to the west and in the same belt are the Bunker Hill, Alpha, Giron and Morris workings of the Colorado, and just beyond Point and the Ruth mines and looking east and west the observer notes the Ada, Jupiter, Ruth, Star Point and Eureka shafts, which all within less than half a mile of a straight line north and south, but extending for over six miles east and west.

Directly east of the Black Crow claim, on the north of the Butte and London is sinking a shaft that is now 900 feet deep and has cut several strings of ore. The shaft is being sunk to a depth of 1,000 feet and is being developed by the Colorado Exemption Copper Company. The shaft is being sunk to a depth of 1,000 feet and is being developed by the Colorado Exemption Copper Company.

The Colorado Exemption Copper Company has acquired the Ella and Louise mining claims, which adjoin the Combination, owned by the Colorado Exemption Copper Company. The Ella and Louise claims are situated on the east side of the Combination mine. The Ella and Louise claims are situated on the east side of the Combination mine.
