

NO CUT IN COPPER OUTPUT

RI THE PRODUCING IT AT 80 PERCENTS A POUND SINCE MERGER.

Senator Clark's New Mining for Zinc Growth of the Colorado Tungsten Interests—New Machinery Installations in Mexico—Big Rush to Iditarod.

There is no evidence at present of any curtailment of the copper output. Indeed it looks as if the May production would slightly exceed April's. Some additional men have been put to work and the Nevada work is in the progress of a class after a shutdown of ten months. In consequence of its engine being wrecked there is no likelihood of doing away with Sunday work and thus causing a curtailment of about 400,000 pounds more because the smelters have to be run seven days in the week and the ore has to be taken to the smelters.

With the passage of the Stewart and Original Mines and the Butte Reduction Works, the property of Former Senator W. A. Clark, into the hands of the Amalgamated Copper Company to-day, everything is expected to move along as usual, except that the men of the Clark properties will still remain in the Clark employ. Supt. Tom Bryant, who has been connected with the Stewart and Original mines for a quarter of a century, will assume charge of all the copper properties of Senator Clark and will have a large force of men under his developing mines which have been running for many years, such as the Travona, Foreman, N. K. Hill, and the Elm Orlu zinc mine, which is to be worked to its full capacity.

The Pittsboro smelter of the East Butte Copper Mining Company is now operating two furnaces and handling the ore of the Butte-Baldwin Company, which is making a shipment of about 200 tons.

There is a report that the Alex. Scott directors may find it necessary soon to issue a call to stockholders for \$1 a share of the 50,000 shares of preferred stock in order to carry on development. It is said that on the 1,200 level the company has struck ore in the Butte district. The mine is now down 1,800 feet. Shipments are expected soon.

Just what has occurred in the erection of the Butte and superior concentrator cannot be ascertained, but all work has been laid off. The underground work is proceeding as usual and the mine is shipping 100 tons of ore a day to the Basin concentrator. It is stated that the Basin concentrator is now producing 100 tons of ore a day. The Basin concentrator is now producing 100 tons of ore a day. The Basin concentrator is now producing 100 tons of ore a day.

As a result of the merger it is announced that copper is being produced at a 60 percent level. It is said that in time the metal may be turned out even lower. At all the mines of the Amalgamated Copper Company development is proceeding and the shipments are up to normal. During the past year the Amalgamated Copper Company produced 2,362,143 ounces of silver and 7,667,728 ounces of gold.

At Georgetown the Montana mine has joined the list of producers. Shipments are being made to the Basin concentrator. The Amalgamated Copper Company is producing 100 tons of ore a day. The Basin concentrator is now producing 100 tons of ore a day.
